>>navigational device. Stay focused.
>
> "Not?" Care to argue with the FAA and the Air Traffic Control people
> on that? You would lose big time.

Transponders are NOT "navigational" devices. While one is required when operating in certain controlled airspace and when filed IFR, it does NOT provide the pilot with ANY navigational information. It's purpose is identification and collision avoidance.

>> So far, you've only been half right. Your lack of situational awareness
>>on current aeronautical navigation would get you busted on the check ride.
>
> This isn't a flying newsgroup, dumas.

Well, Your Spitefulness, so far you've spent three days trying to gain Newsgroup Supremacy by trying to impress us with your (narrow) prowess in things aeronautical.

More usual lying, twofaced Andersonian "Do As I Say, Not Do As I Do" rhetoric.

>No "check rides" are "required" to explain principles of civil aviation
> radionavigation to the ignorant.

Good...when the ignorant arrive, we'll send them your way...they'll be in good company.

>> You're right...No license is required to learn. However PRACTICAL
>>EXPERIENCE is required to know the difference between theory and
>application.
>>

>> You know neither!
>
> Just another insult claim. Sigh.

It's not an insult if it's true, Lennie.

>I did use an en-route chart once on a trip to McCarran Field in NV.

OOOOOIE! Did you play "I Spy" while you were at it, Lennie...?!?!

HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA ! ! ! ! !

>>>Does the acronym ARINC mean anything to Robeson?
>>
>> Does it to Anderson?
>
> Aeronautical Radio INCorporated. An industry group that set
> the aviation electronics standards...(SNIP)

Yes Lennie, I know. Since you asked (in the very post that I am responding to) what anything about civil aviation had to do with Amateur Radio, allow me to ask what ARINC, or any of your technical dissertaions on VOR-vs-TACAN has to do with it, other than to give you a chance to grandstand...????

>Aeronautical Radio was a private communications service before
> WW2...(SNIP)

Here we go with Lennie regressing several decades while he simultaneously lambasts any Amateur who dares to discuss anything historical as "stagnant", etc, etc.

>> Yes, Lennie...we know...just one more 50's-era historical tidbit taht is
>>the backbone of your rants.
>
> Tsk, tsk, tsk...Those "tidbit tahts" (practical experience in design
> and use) extend into the 80s.

Then why, in 2003, were you asserting that VOR receivers are crystal controlled? THAT was OVER 20 years ago, Lennie. Actually closer to 30.

>Do you want to get into L-band transponders and Teledyne
> Electronics (Newbury Park, CA) in the early 1980s?

Twenty-plus year old technology, Lennie? Why? Is it germane to Amateur Radio? Is there ANYTHING remotely germane to the current subject of Morse Code identification of aeronautical navaids in the United States?

>> Inside the box? No doubt. How to USE the box? Never. You've already
>>demonstrated significant lack of skill in the alst two posts. I'd let you
>>tweak my NAVCOM's, Lennie, but I'd rap your knuckles with a ruler if you
>>tried to play with them in the air.
>

Oooooh! A THREAT from the Lying One!

>> Oh..?!?! In what capacity did YOU use the NAVAIDS of an aircraft in
>>flight, Lennie?
>
> You don't have a "need to know."

That's alright Lennie. I ALREADY know...you DIDN'T!

>>>Get some mental help, Robeson. You need it badly
>>
>> I am not the one who think's he's Sky King, Lennie.
>
> Yes you are. All you are capable of in here is to insult, demean,
> and try to humiliate anyone who opposes you.

"Opposes" me, Lennie? So far all you've done is dig yourself into yet another "why I didn't get a license" quagmire, and demonstrated your lack of practical skills in aeronautical navigation.

It's not "insult(ing)", "demaen(ing)" or "humiliat(ing)" to expose YOUR mistruths and inadequacies. You make it rather easy, acutally.

>That's a form of
> sociopathy. You don't "play well with others," can't take the
> slightest correction without going berserk in here and generally
> act like a grade-A asshole with oak leaf clusters.

Hmmmmm....profanity, demeaning insults and failure to "play well with others" noted of the person who just accuswed someone else of the same traits.

>> And I STILL don't see your name in the FAA database.
>
> True enough. Now, what has that to do with US amateur radio
> or morse code testing?

You brought up the subject, Lennie. I am simply pointing out that this is yet another area knowledge that you are both deficient and unlicensed in, despite YOUR assertions that you are oh-so qualified in.

Loser. (That's English for PUTZ!)

Steve

HOW COULD I HAVE MISSED THIS...?!?!

>>There were no taxpayers writing off flying lessons for other tax-
>> payers 40 years ago. Dual time (that's with an instructor) was
>> $17 an hour, solo time was $12 an hour 40 years ago.

Yes, Lennie, there WERE! At that time you were eligible for the WW2 Era
GI-Bill, and at THAT time could have completed ALL your airman ratings THROUGH
Airline Transport Pilot (incuding CFI/CFII).

The program was LATER ammended to only provide ADVANCED flight training to
those already holding a Private Pilot certificate.

I must be getting slow! Whew! But still threw a wrench into yet another
LennieRant!

So...you've done your "twenty" in the USMC...and "30 years" as
a licensed aviator ("pilot-in-command")...and had at least 10
years as a nurse. That adds up to, roughly 60 years.

You were born in 1955 (plus/minus one).

Either you have a time machine or you LIE, sweetums.

EXAGGERATION OF THE TRUTH TO THE POINT OF LYING.

>> (want a scan of the punch card reply? as if you care?)
>
> What? Yet another chance for you to claim a "mistake" and send yet

You don't want the truth.

You can't handle the truth.

> Other than my hang glider, I don't own an aircraft either, but I still
>manage to get to fly on a regular basis.

Wow. "Pilot in command" of a T-6! You are a "left-seater?"

> Of course, YOU are King of Excuses when it comes to not finishing what
you
>start, aren't you? You can't even pony up the $10 and the hour of time it
>would take to get an Amateur license.

Poor baby. Still delusional as well as sociopathic.

I finished a career in commercial and military electronics, making
a nice living. I still work in electronics when and where I feel like
working.

> And that's about what it was when I got my license in 74. I started two
>years earlier, doing the usual "kid jobs", etc, to earn money to fly with.

Isn't that so wonderful! You did "kid jobs" at age 19.

But...wait...wasn't "Sgt Putz" in the USMC then? ?

Did they have sergeant pilots in the USMC then? ?

In 1974 I was a senior staff engineer at RCA Corporation and
was granted my first patent.

>> "Not?" Care to argue with the FAA and the Air Traffic Control people
>> on that? You would lose big time.
>
> Transponders are NOT "navigational" devices. While one is required when

Poor baby. Probably hasn't been in a TRACON or done anything
but curse at ATC personnel. :-)

Nearly all of the Los Angeles Center is controlled airspace. It isn't
like the remote wilderness of TN. Busy place here. Radar vectoring
all around.

Tsk, tsk, tsk...Robeson thinks he knows collision avoidance. :-)

> Well, Your Spitefulness, so far you've spent three days trying to gain
>Newsgroup Supremacy by trying to impress us with your (narrow) prowess in
>things aeronautical.

What is this "supremacy" gig, dumas?

You don't have the slightest conception of what goes on inside those
avionics boxes. I offered a little insight. You NEED insight, boy.

> More usual lying, twofaced Andersonian "Do As I Say, Not Do As I Do"
>rhetoric.

Minister al-Sahhaf doesn't want information? Poor baby. Lives in
an alternate reality then. Too bad the minister can't learn anything.
Learning is a scary thought to him?

>> Just another insult claim. Sigh.
>
> It's not an insult if it's true, Lennie.

Robeson LIES. Robeson CURSES. Robeson INSULTS.
Robeson has B.O.

> OOOOOIE! Did you play "I Spy" while you were at it, Lennie...?!?!

The location filming company that contracted to the TV show
"I Spy" was then located in an industrial park just west of
BUR (Burbank-Glendale-Pasadena Airport). That TV show
may have done a few locations around Las Vegas but most of
the shows were shot off-shore.

Why is that important, dumas?

>> Aeronautical Radio INCorporated. An industry group that set
>> the aviation electronics standards...(SNIP)
>

Anyone engaged in civil avionics design SHOULD be familiar
with ARINC. It is obvious that Robeson doesn't know snit from
shoeshine.

> Here we go with Lennie regressing several decades while he simultaneously
>lambasts any Amateur who dares to discuss anything historical as "stagnant",
>etc, etc.

ARINC still exists. They have a website.

> Then why, in 2003, were you asserting that VOR receivers are crystal
>controlled? THAT was OVER 20 years ago, Lennie. Actually closer to 30.

Civil avionics VOR receivers are still crystal controlled.

> Twenty-plus year old technology, Lennie? Why? Is it germane to Amateur
>Radio? Is there ANYTHING remotely germane to the current subject of Morse
>Code identification of aeronautical navaids in the United States?

Tsk, tsk, tsk...the Minister brought up the automatic morse code
ID on civil airways radionavigation ground stations. Civil aviation
has nothing to do with amateur radio or morse code testing.

Steve Robeson, aka Steve al-Sahhaf of the Ministry of Information,
has constantly brought up invalid examples of the alleged necessity
or alleged aid of morse code seemingly in everyday life. He has
become delusional as well as sociopathic.

> Hmmmmm....profanity, demeaning insults and failure to "play well with
>others" noted of the person who just accuswed someone else of the same
>traits.

"Accuswed?!?" Rage and message typing do not go together. ;-)

> You brought up the subject, Lennie. I am simply pointing out that this
>is yet another area knowledge that you are both deficient and unlicensed in,
>despite YOUR assertions that you are oh-so qualified in.

Tsk, tsk, tsk...Robeson brought up the "morse code necessity on
radionav IDs" to Vipul Shah.

That was nonsense as to "necessity" then, is still nonsense now.

> Loser. (That's English for PUTZ!)

Tsk, tsk, tsk...more attempts at insults from al-Sahhaf the amateur.

Get help, Steamy. You are in sore need of it.

Polish.

>About f---in' time!

The working (field enforcement) staff begged for this fifteen years ago, and the then-Commish' in its infinite wisdom declared that it would be "better" to let industry develop its own voluntary standards -- the "less work for Washington" approach. We see how well that worked.

Part of this inquiry is because the EU has had susceptability standards for several years and the manufacturers are expected to push for standards which are no stricter than those of the EU. Fortunately, they are pretty strict.

We will see what happens - money talks and big money talks the loudest.

>Does Israel have the right to exist as a sovereign nation?

Israel is the Jewish homeland - it has an absolute right to
exist.

>Does "Palestine" have the right to exist as a sovereign nation?

There already is a country that is the "Palestinian" homelanmd.
It lies east of the Jordan River and the Arava and it's misnamed
as a "Hashemite Kingdom" although the Palestinian Arabs outnumber
the Hashemite Arabs two to one.

>> Since the Palestinians cannot
>> do anything about their situation while Israel controls their fate, the

>
>WHOA! "Can't do anything about their situation"??? Sounds like
>"learned helplessness" to me.

Taught to them by a corrupt and evil leadership.

>Have they tried nonviolent resistance? Not sporadically, mind you, but
>as a widespread grassroots movement?

Any "leader" that advocates that would be deposed in short
order.

>How about legal challenges through the justice system?

Try it.... <ggg>

>How about simply emigrating and starting a new life somewhere else?

See my comment above.

>I've never been to Israel, so perhaps the following questions seem
>naive. But I'll ask them anyway:
>
>- Can anyone who applies become an Israeli citizen, and get full
>voting rights?

Yes.

Anyone who is born in the country (or is born to an Israeli
parent temporarily out of the country) is a citizen unless the
parents' visa conditions preculde this ("guest workers" and
foreign diplomats inside Israel).

Anyone who has at least one Jewish grandparent or who converts
to Judaism outside the country and then immigrates into the
country is automatically granted citizenship on request after
arrival.

Anyone who converts to Judaism under the auspices of the
Israeli Rabbinate inside the country is automatically eligible to
request citizenship.

For anyone else not in the above categories, it's about as
complicated a process as we have here in the US but it is
doable. My (non-Jewish) sister-in-law is going through that
process now.

>- What was Palestine like before 1948 in terms of agriculture,
>industry, education, civil rights?

It was under a British mandate, and the Brits were as nasty to
the Jewish community as they were/are to the Irish Catholic
community in Northern Ireland. The Jewish settled areas were
in the process of development of agriculture, industry and
education which flourished. The Arab settled areas were far
less developed in spite of being occupied for a much longer
time.

>- Why have all of the proposals for a Palestinian state been rejected?

The "Oslo Peace Process" would have given the Arabs 92% of the
disputed territories and provided for establishment of a
separate state. The radicals among the Arab political leaders had
their own agenda and wrecked those chances.

> What was missing in those proposals?

What was missing in the eyes of the Arab leadership was
pushing the Jews into the sea.....

>Perhaps his worst fault was taking bad advice from the likes of Henry
>Kissinger, who advised him to admit the Shah of Iran to the USA.

Doktor Heintz has his own agenda for doing things. Best not
to try to discern what it is.

Oh, by the way, we DON'T give a damn what they think. And that happens
to be a *very* widely held opinion. They sell weapons and war technology to
Saddam and Al Queda and don't give a damn what WE think about that, so why should
we ever again care what they think? All they're good for is stymieing anything and
everything constructive in the UN. And protecting *their* interests regardless of
any others.

Dear Larry,
Trying to muddy the issue about justification for this war by interjecting labels like "liberal democrats" vs. "conservative republicans" is not making sense. There many conservatives, patriots, republicans, clergymen, etc, who are questioning where this administration is going with this manifest destiny stuff ("Pax Americana"), such as Pat Buchanan, Bob Knovak, William Saffire, etc. Do we no longer agree with our founding fathers who recommended "avoiding foreign entanglements"?...and that is not to preach isolationism, by the way. I am concerned that the U.S. has, perhaps needlessly, just grabbed the tiger by the tail. Someone tell me how this plays out and we get back to life, liberty, and the pursuit of happiness and, of course, manditory testing for morse efficiency.

Is OBL winning or losing? Has capitalism so failed us internationally that we have to resort to force of arms? Could we not take the same $10E9 and convert our economy from hydrocarbon based to nuclear/hydrogen based and let our current oil fed foes starve or sell them the technology for the price of laying down their arms?

Dear "UNK",
As to easily recognizing "evil", there are a few million readers of the Koran who honestly discern YOU as evil. And the U.S. recent and apparently future planned incursions, campaigns, etc. will reinforce their feelings. Going back in history, the Ottomans thought the Armenians were "evil". Many germans, at one time, thought the Poles, Jews, Czechs, Slavs, and/or Gypsies were "evil" (I kind of agree about the Gypsies by the way after my problem in Rome). We humans need to be very careful about easily discerning evil as an obvious attribute, as it seems to escape our capacity to do so correctly from time to time.

Was Iraq a direct threat to the U.S. with WMD? I don't think so.
We have "owned" Iraq for the last 11 years. We have bombed and missiled the s**t of of them from the air with satellite and on-ground covert work (Mossaud) assist during that period. I am disgusted with "reason de jour" justification of this campaign. I finally heard one of the CNN/MSNBC/FOX chief propagandists say this morning "It is fortunate that we reporters do not have to adhere to a fixed set of principles". The U.S. foreign policy needs to be a clear, fixed set of principles that our friends and foes cannot mistake. Oh... and please something other than "Might makes right.".

Lastly, I never thought I would stand with Jon Bloom on any issue, but I do on this one. Having said that, I prefer to not respond any further as this subject should be (OT) on this newsgroup. There are multitudinous suitable groups carrying on this thread. And, TRADITIONALLY, hams are supposed to avoid political discussions in the interest of

brotherhood and international good will.

Of course...you never sleep either. That may explain things.

> I notice both you and Vippy seem to have a problem with that concept, and
>that both of you are allegedly "engineers". What's that say about the
>occupational field...???

Rather good, I'd say. I'm now a Life Member of the IEEE, don't pay dues anymore. Nothing extra to reach that.

Electronic engineering is an interesting, rewarding, and (often) a creative professional occupation. I've enjoyed the career and continue to do so in part-time work.

> Oh, I accept that you may have had a student pilots permit at one time.
>Lots of people start flying then never finish. You were just one of them.

Private flying is not a requirement for electronics engineering.

>>> Other than my hang glider, I don't own an aircraft either, but I still
>>>manage to get to fly on a regular basis.
>>
>> Wow. "Pilot in command" of a T-6! You are a "left-seater?"
>
> First of all, I'd LOVE to have PIC time in a T-6. But what I'd REALLY

>like to know is where YOU are coming up with this...?!?! I have never
>indicated ANY experience in the T-6.

Tennessee CAP doesn't have any T-6s? Tsk, tsk, tsk, its a
standard aircraft around here for CAP. Old aircraft, went out of
production decades ago.

What do you "fly?" Aeronca C-3s? :-)

Maybe rebuilt or replica Wright Flyers?

> "Delusional"...?!?! "Sociopath"...?!?! I said you have numerous excuses
>as to why you don't finish your licenses and you relate it to your
>"career"...?!?! Someone's "delusional" here, Your Putziness, but it ain't
>me.

Since when did a pilot's license pertain to anything in radio?

Steam Robeson has gone off on the deeper end again.

> And since you brought up your "expert knowledge" in aeronautics, how come
>you've not finsihed up THAT license...?!?!

No such license was required for my work. No pilot's license is
required to design, produce, or work on civil or military avionics.

I don't claim to be any "expert" on avionics. However, in comparison
to Steam's ignorance, I appear to be an "expert." :-)

>>> And that's about what it was when I got my license in 74. I started
two
>>>years earlier, doing the usual "kid jobs", etc, to earn money to fly with.
>>
>> Isn't that so wonderful! You did "kid jobs" at age 19.

> Up until I went to boot camp...Yup.
>
>>But...wait...wasn't "Sgt Putz" in the USMC then?
>
> Not until September 1974. Wanna refigure the math, Your Putziness?

Why? Are you busy with your "CV" in here? :-)

Does the USMC have sergeant pilots? If so, what aircraft?

You seem to think having a pilot's license is Very Important to
radio knowledge. How come Steamy wasn't a USMC pilot if
he had a private pilot license two years before joining?

Inconsistency. Tsk, tsk, tsk. That's getting to be another
"seven hostile actions" thing, isn't it?

>>In 1974 I was a senior staff engineer at RCA Corporation and
>> was granted my first patent.
>

> And now look where you are...generating hundreds of bits of hate-mail in
>a newsgroup dedicated to a field of radiocommunications in which you have
>expressed no real interest in being part of .

Tsk, tsk, tsk...still with the bad sentence structure. Did you
enlist in the marines to hide the shame of failing high school
English? :-)

This newsgroup is about AMATEUR RADIO. Do you understand
radio? I don't think so. You seem to think a pilot's license is
needed to operate a radio. That's bizarre.

>> Poor baby. Probably hasn't been in a TRACON or done anything
>> but curse at ATC personnel.
>
> Why do you persist in humiliating yourself, Lennie?

Humiliating? Nope. I've been to a TRACON. I've talked to ATC
personnel away from one. No problems, no badness, no
humiliation.

Steamy is imagining things again, poor guy.

>>Tsk, tsk, tsk...Robeson thinks he knows collision avoidance.
>
> Ever see my name in an NTSB report vis-a-vis a midair?
>
> Guess I DO know something about collision avoidance.

Sorry. By Robesian logic, one has to be IN something to "know
about it." Since you claim to have never been in a mid-air,
you know NOTHING about it. :-)

> Not really. That's your self deluded ideation of what I MUST need in
>order to make YOURSELF happy. If that's what it takes, indulge yourself.

Tsk, tsk, tsk...you need mental counseling. Medical science
must have some new drug that would help you.

> Hmmmm...that's funny. Seems I remember trying to coax the Licenseless
One
>into doing some tutorials on microwave principles...NOW you find it
appropriate
>to "lecture" me..?!?!

Someone has to. Steamy knows less about microwave technology than
operating the knobs on his OBS...but NOTHING about the circuitry or
systems behind the front panel.

> Funny how your willingness to "impart knowledge" seems to be tentative
>on your desire to be Newsgroup Hero.

Steamy is still imagining things. This is just discussion in a newsgroup.

Steamy thinks it is all about "fighting." Bizarre. Must be paranoia
or some form of sociopathy. Certainly unbalanced.

> It doesn't work.

Steamy doesn't work IN electronics. The closest he's been is as a
purchasing agent in a small firm for less than a year.

> One out of four, Lennie. I do take great sport in insulting you. Of
>course it's all possible by the fuel you provide.

Sociopathy for sure, Steamy, you've become infected with it.

You cannot play well with others. You need counseling and
therapy...possibly a drug prescription.

> Morse Code testing was not the topic. It may be in YOUR singular mind,
>but there are others in this forum who can discuss more than one topic
>simultaneously.

Tsk, tsk, tsk. Steamy hasn't been able to discuss ONE topic without
insulting others.

>>> Hmmmmm....profanity, demeaning insults and failure to "play well with
>>>others" noted of the person who just accuswed someone else of the same
>>>traits.
>>
>> "Accuswed?!?" Rage and message typing do not go together.
>
> Rage...?!?! Naw! I spend more time smiling and laughing as I poke yet
>another hole in your silly ramblings...You DO make it easy.

What is this word "accuswed?" It's not in my dictionary.

Does it mean you are married to cursing? That's a possibility...

Get help, Steamy. You will be better for it.

Will this legislation have a negative impact on the receivers in our ham radio equipment? Has anyone seen the standards manufacturers will be made to follow when designing receivers? Will these standards reduce the receiver's sensitivity or receive capability in any manner?

Lets keep the discussion within the realm of reality, Larry. Saddam didn't threaten the "rest of the free world" even prior to the last Iraq war. He was a two-bit dictator of a third world country with a third world military. He could not even defeat Iran, much less the rest of the free world. And, after the reduction of his military during and after the last war, he was even less of a threat to the free world leading into this war.

As for WMD (if he actually had them leading up to this war), he did not use them even to save his country from a direct attack or to save his own life - not exactly what one would expect from a person intending to use them on the "rest of the free world."

> Do-nothing pacifism avoids responsibility.

I disagree. While I'm not a pacifist, I do come from a religious background that advocates pacifism. As I see it, instead of your rather bleak outlook, pacifism requires the ultimate in responsibility for one's actions - the idea that one is not going to lower oneself to the same violence of another unless absolutely necessary, combined with the restraint to hold one's own violent tendencies in check. In a violent world, that requires far more control, and bravery, then the ease of just striking out at anything one objects to.

I think it's important for every American to have the right to voice
their displeasure with their government, -at no risk to themselves-,
while other Americans are dying on the battlefield to protect that
right.

The Constitution doesn't mandate patriotism, and I think the Dixie
Chick merely exercised her right to be unpatriotic and stupid.

Dave, damn! Next time you're this way let me know and I'll buy you
lunch at Alice's Resturaunt, or maybe even Mark Pi's. Put a belt clip
on that Ten-Tec radio, get your knee-key, charts, diagrams, and 8x10
glossies with circles and arrows.

We just might get through this thing if you're ready to open up a
little.

Brian

No, it's not. It's utterly inconsistent, in fact. Not giving a damn about what anyone else thinks is much more likely to endanger you than at least trying to reach common ground with them. The effort to reach common ground doesn't require giving up your own vital interests, such as self defense, but not making that effort makes it more likely that you WILL have to defend yourself.

Right on the money, Dee!

In my experience, sometimes the books were pretty good, in other cases they were almost useless. Cost was not an indicator of quality, either. There were also cases where we were expected to buy a high-priced book and wound up using only a chapter or two.

Some universities dealt in used books and buy-back programs, but they were rare.

Most amateur radio publications are not meant to be university textbooks. Most EE courses are not about radio.

Kindly note the reaction of the average Iraqui to the coming of our
armor & troops. There are 26 million of them, we've lost 100 or so of
ours so far. As ill-founded (YMMV) as the rationale is for getting
into this quagmire is it not coming up a worthwhile endeavor anyway?

He is a spammer because his posts, per the newsgroup FAQ and charter for the "rec.radio" hierarchy, are specifically NOT appropriate here and are supposed to go to a different newsgroup - and HE KNOWS THAT because he had to apply for permission to post on that other newsgroup and was granted it. Many of his stories are NOT policy issues. Granted, there's alot of ranting by the participants here that are also off topic, but their error doesn't justify his.

You will note that I don't contest his posting on "rec.radio.amateur.MISC". That's because the FAQ and charter DO permit it there (but technically, it should be CROSS-POSTED, not separately posted, to "rec.radio.info", which he isn't doing).

Well, I see that my point went completely over your head on this one: Why
didn't BP contact K6PYP or KC6OKA to get the other side of the story? Here's
why: BP wasn't interested in TRUTHFUL reporting but would rather smear the
reputation of individuals he didn't personally like. They probably should have
sued him for defamation of character (which is one of the things that can
breach the "CA Shield Law" for the press).

In the truth of this situation, you will find that the repeaters in question
were so far apart (~150 miles) that one could not interfere with the other in
their respective counties, especially considering the FM capture effect - and
that the real issue here was the Mexican's malicious interference for wanting a
"clear channel" (i.e. no one else on it) vs. a "usable channel" (which is what
the capture effect would give them up to the northern border of San Diego
County).

Fred's actions, although absolutely disgusting, are not illegal in any way. I don't know what actions you refer to by Gordon that "the FCC will do for free" because the only action I am aware of him doing is his teaching activity which the FCC doesn't do at all.

> >Mr. Pasternak is paying himself a SALARY for collecting the

Read the unified newsgroup FAQ for all of "rec.radio" and that should make it clear to you that his posts on this group are inappropriate.

As I have said before, just because others have gone off-topic doesn't justify more off-topic posts.

Nothing wrong with that...

>As I see it, instead of your rather
>bleak outlook, pacifism requires the ultimate in responsibility for one's
>actions - the idea that one is not going to lower oneself to the same
>violence of another unless absolutely necessary, combined with the restraint
>to hold one's own violent tendencies in check.

There IS something wrong with that.

Embedded in that long sentence is the self-enobling "lower oneself
to the same violence of another" only slight modified by the
appended "...unless absolutely necessary." That means some
implicit enoblement which is no defense of anything, just a
refined form of braggadoccio.

There is NO courage in martyrdom or of letting others walk all over
you in symbolic conquest. Being a martyr is only "glory" as
perceived by others believing the same thing...all of which becomes
null and void when the martyr and the believers are dead, destroyed.

>In a violent world, that
>requires far more control, and bravery, then the ease of just striking out
>at anything one objects to.

While martyrdom and combat-for-what-one-believes-in can both
result in death, the combatant at least DOES something.
Martyrs resign themselves to death without doing anything at
all. That's a violation of the basic, built-in imperative in the
human race: Survival.

Aiding and abetting martyrdom might give emotional comfort to
those living in some intellectual fantasy world, but it is totally
unrealistic. All the intellectual fantasies put together are a
very meager sustenance, insufficient to keep a martyr alive.

Pacifism is often motivated by personal fear. That is not a redeeming attribute. It isn't noble or on some "higher plane" when the motivation is purely personal. Is selfishness a noble attribute? I don't think so.

I too come from a religious background, a religion begun by a Catholic priest of long ago named Martin Luther. One might say it began when Luther nailed a document to his church door (a simplistic viewpoint, perhaps, but illustrative). Many centuries ago that took considerable courage when the Catholic church considered themselves "higher" than ordinary folk and didn't want to "lower" themselves to their level by having Bibles only in Latin rather than in the native language. The Catholic church reformed itself after Lutheranism spread. That was good for all. It was NOT an easy task. History shows that.

Pacifism is a form of denial, an avoidance of responsibility, emotional selfishness. Such grows into "noble thoughts higher than the common emotional level" when sheltered from harm...sheltered by the very "lower level" common folk the pacifists declare they "rise above." Nonsense.

I didn't say it was. Just (correctly) pointed out that this was yet
another thing you've NOT accomplished.

>> First of all, I'd LOVE to have PIC time in a T-6. But what I'd REALLY
>>like to know is where YOU are coming up with this...?!?! I have never
>>indicated ANY experience in the T-6.
>
> Tennessee CAP doesn't have any T-6s? Tsk, tsk, tsk, its a
> standard aircraft around here for CAP. Old aircraft, went out of
> production decades ago.

Unless someone has a T-6 in private ownership in CAP colors, there are NO
T-6's being flown by Civil Air Patrol...In California Wing or any other. There
were none when I was a member of CAWG in the late 80's, and I see none on the
current roster.

>What do you "fly?" Aeronca C-3s?

Currently? The Cessna 172, 182, 172RG, 210 and the American
Aviation/Grumman AA1A/TR-2.

You?

>Since when did a pilot's license pertain to anything in radio?

Since you once again assert "expertise" in something but cannot
demonstrate practical experience in it. A pilot's license would be prima facie
evidence that you accomplished SOMETHING.

>Steam Robeson has gone off on the deeper end again.

At least I have the steam to go in deep, Lennie. You're just petered out!

>> And since you brought up your "expert knowledge" in aeronautics, how
>come
>>you've not finsihed up THAT license...?!?!

>
> No such license was required for my work. No pilot's license is
> required to design, produce, or work on civil or military avionics.

No...Only to prove practical experience in APPLYING your work. Again, you
may know what goes on INSIDE the box, but you have zero-point-squat experience
IN the air using it.

>I don't claim to be any "expert" on avionics. However, in comparison
> to Steam's ignorance, I appear to be an "expert."

You "appear" to be expert in several things...none of which includes
practical radio communications or aeronautical navigation.

>You seem to think having a pilot's license is Very Important to
> radio knowledge. How come Steamy wasn't a USMC pilot if
> he had a private pilot license two years before joining?

Having a pilot's license is important to being able to substantiate
practical experience in aerial navigation.

And you seem to not be able to keep the math straight on when I joined the
Marine Corps and when I got my license.

>Inconsistency. Tsk, tsk, tsk.

My thoughts exactly. Wanna go back throught the last couple days
exchanges in this thread alone and see why YOU are once again in error?

>This newsgroup is about AMATEUR RADIO. Do you understand
> radio? I don't think so. You seem to think a pilot's license is
> needed to operate a radio.

Where did you see me say that?

I think making such silly conclusions without supporting evidence is...

>bizarre.

Thanks...just the word I was looking for...

> systems behind the front panel.

But...but...but...LENNIE! This is a newsgroup on Amateur Radio...NOT civil Avionics!

And I know more than you allow yourself to assume I know. But that's YOUR fantasy, and I'll let you enjoy it.

>> Funny how your willingness to "impart knowledge" seems to be tentative
>>on your desire to be Newsgroup Hero.
>
> Steamy is still imagining things. This is just discussion in a newsgroup.

No it's not. It's all about a ner-do-well ex radio technician's desire to prove himself "better" than mere mortals because he is too cowardly or too proud to sit for the same civil radio exams they had to sit for.

>Steamy thinks it is all about "fighting." Bizarre. Must be paranoia
> or some form of sociopathy. Certainly unbalanced.

Another diagnosis from your correspondence course trained psychology major missus, Lennie? You've still not reconcilled us with how you at once stated she was a licensed therapist, then turned around an said she's NOT a psychologist or psychiatrist.

In your words..."bizarre".

>You cannot play well with others. You need counseling and
> therapy...possibly a drug prescription.

You certainly take great pleasure is talking about psychotropic drugs all the time, Lennie. Wonder if I make a couple calls to ER's in your area if I'd find out if you were a frequent flier for drugs yourself?

>Get help, Steamy. You will be better for it.

Check the mirror, Your Confusedness. Must be terrible to be at your age and have so many things un-done.

Whew.

Steve

Then I guess he's "withdrawn" for the renew-for-fee scheme that W5YI, and
now the ARRL seem to find lucrative.

>But it reduces to a pecuniary interest that IS banned by the rules because he
>is accepting compensation to write and make a transmission (which is then
>re-transmitted as noted below). There is a rule that does forbid this.

Then, Dieter, may I suggest you write an appropriate letter of concern to
Mr. Hollingsworth and voice your concerns? I know he's an active Amateur
himself and must be aware of Mr. Paternak's service, yet he's not taken any
action nor made any effort. Perhaps if you prodded him a bit?

>Read the unified newsgroup FAQ for all of "rec.radio" and that should make it
>clear to you that his posts on this group are inappropriate.

Then if we strictly enforce the FAQ's we can expect a reduction of, say,
95% of all the posts here? Including yours vis-a-vis what is
appropriate/inappropriate?

>As I have said before, just because others have gone off-topic doesn't
>justify
>more off-topic posts.

Well....nuff said, I suppose. If you are THAT concerned about the
potential violations of Part 97, then I'd expect you to write the FCC as
suggested. Otherwise I don't forsee any resolution to the situation. I for
one enjoy being able to see and then comment on the pertinent parts of his
posts here as it applies to them.

>Knovak, William Saffire, etc.

Good point, Clay. There are also large numbers of "liberal democrats" who have not opposed the war at all.

>Do we no longer agree with our founding

It all basically comes down to the White House feeling that we are threatened enough, and the chances of success high enough, to make military action worthwhile.
>
> Is OBL winning or losing?

We'll know in a few decades.

Remember who trained OBL (a murderous bastard) in the use of weapons and the organization of a covert anti-government movement. The CIA was willing to turn a blind idea to "resistance" atrocities against the Soviets back then.

Then the Soviets finally left, and the Moscow-tied Kabul govt. collapsed, Afghanistan erupted in civil war which finally ended when the Taliban took over. Were the Taliban better than the Moscow-tied govt. the USA helped topple?

>Has capitalism so failed us

>the same $10E9 and convert our economy from hydrocarbon based to
>nuclear/hydrogen based and let our current oil fed foes starve or sell them
>the technology for the price of laying down their arms?

That sort of thing is "boring" to many people, Clay.

There's also the fact that, as Jon Bloom's link points out, the USA had a role in empowering him and selling him weapons and weapons technology.
>

>needs to be a clear, fixed set of principles that our friends and foes
>cannot mistake. Oh... and please something other than "Might makes right.".

A lot of this really boils down to the tendency of American foreign policy to be willing to partner with all sorts of murderous bastards simply because they are suupposedly not as bad as some other murderous bastards. Then the mess created has to be cleaned up by another war.

For example, the USA backed the Shah of Iran (a murderous bastard) because he was anti-USSR and would sell us oil cheap. A blind eye was turned to the Shah's domestic atrocities. It took a radical group to overthrow him because moderate groups were exterminated. Then Iran went from being a friend to a foe, so the USA helped Iraq, and turned a blind eye to SH's atrocities for a while.

You still don't get it Jon. After 12 years of them waffling over the Iraq problem
I couldn't care less what France Germany Russia nor the UN thinks about it. Obviously their views are contaminated beyond recovery by their financial interest
in keeping Saddam in power. I agree with the administration, we must not wait for
the next version of 9/11.
I doubt you'd have done so, but I, for one, wondered following the 1993 WTC attack, how they'd do it next time, in a better effort to do it right. We learned the answer on 9/11. Allowing Saddam to arm the Islamic terrorists by allowing our European "friends" to stonwall and delay until nothing *can* be done is futile folly.

It's not a matter of being 100% correct. It's a matter of DUE DILLIGENCE, which was lacking here. Had BP tried to contact those on the other side of the story and was refused an interview, that would be different. I have been informed by those two individuals I mentioned in an earlier response that no contact attempt was made that they know of - despite the fact that one of them had a listed telephone number.

See due dilligence above.

> >Fraud is everyone's problem.
>
> You can prove fraud? You can prove that Mr. Pasternak's expenses are NOT
> the +/- $1000 he claims?

Circumstantially, YES:
1) His competitor, Community Video Associates Inc., does the same thing as "Newsline" when they put together "This Week in Amateur Radio" yet TWIAR's expense is 10% of what Newsline's claimed expense is. CVA is a non-profit organization and thus subject to public inspection per 26 USC 6104, so you can verify their expenses for yourself. After eliminating the maintenance cost for the "instant update" phone line ($50/month - and that's generous; it's probably cheaper since it doesn't call out), that leaves an 85% greater cost incurred by "Newsline" (as compared to its competitor). Granted, if the difference in cost were less, such as 10%, this wouldn't be an issue, but with such disparity, one has to wonder.....

2) Via a request of one of the member clubs, the Los Angeles Area Council of Amateur Radio Clubs asked in response to one of "Newsline's" requests for funding to identify the extent of the expenses. "Newsline" turned down the request. The only reason NOT to disclose, especially to a group which may potentially fund the activity, is if something illegal, illicit, or unethical is going on and the person performing that activity does not want to be discovered as having done it.

For six years (1988-1994), I worked as a U.S. Government auditor (for a certain Treasury Department agency that everyone hates this time of year), and based on that training, experience, and the several tax fraud cases that I uncovered during that career, I can tell you that in my professional opinion that these two factors above are STRONG indicators of fraud and/or fraudulent behavior. His lack of ethics in his reporting is a weaker but additional indication. Furthermore, I know of no counterindications that would otherwise explain the situation in a non-fraudulent way.

If you don't believe me, ask him to explain his expenses and see what kind of response you get.

I wouldn't have a problem with that. RH may be unaware that BP is paying himself a salary, but I'm certain he's aware of the rest of it (i.e. the reporting activity). Unfortunately, it's this one fact that changes everything.

Definently 80%. I'm not certain that it would reduce by 95%; I haven't actually counted the posts. :-)

The only reason I haven't done so yet is because I don't have sufficient PROOF. I have only the indications.

However, you will find that for each post he has made here with the "Newsline" script, a complaint has gone to his ISP for violating the newsgroup charter - and NOT ALL of those complaints over the past 6 months have come from me. If he would simply post his stuff where it belongs ("rec.radio.info") and not here, there'd be nothing to complain about as far as his ISP is concerned

Of course "pacifism" covers a wide spectrum. At one extreme are folks who would rather be killed than kill, no matter what the circumstances. At the other extreme are those who will fight, but won't *start* a fight.

In addition, there's the whole dimension of conflict resolution and not empowering those who are likely to become violent. Selling SH's Iraq weapons and the technology to make them empowered him. Guess who sold his regime things like anthrax and botulinum toxins.

>As I see it, instead of your rather

Yup. Some folks, however, cannot see beyond the old ideas of violence.

>In a violent world, that
>requires far more control, and bravery, then the ease of just striking out
>at anything one objects to.

I understand it quite well, Dick. I also understand that there are two sides to the story. That's a concept you have repeatedly failed to get on a variety of issues discussed in this NG over the years, and it doesn't surprise me a bit that you don't get it now. It's so much simpler and comforting to pick a side and demonize all who don't agree with you.

Early Western civilization involved human sacrifice. Fortunately it was outgrown.

> The ironic part is that Islam is the only one of the Big Three
>(Christianity, Judism and Islam) that actually teaches acceptance of the
>other two as fraternal brothers.

I disagree! The Christianity I know teaches acceptance of Judaism and Islam as well as almost all other religions.
>
> I wish I spoke Arabic and understood the culture better to understand
>how they warp it to be just the opposite.

Couple of things:

- Islam isn't a monolithic religion any more than Christianity is. Sunnis, Shiities, lots of varieties, just like there are Catholics and Presbyterians and Jehovah's Witnesses.
>
- It is my understanding that the writings which form the basis of Islam can be categorized into roughly three types:

1) Things which are core beliefs, directly attributable to the Prophet and must be accepted because they are central to the religion (monotheism, for example).

2) Things which are generally accepted to be true and attributable to the Prophet and are accepted by most

3) Things which may be true and may be attributable.

The trouble is that the dividing lines and classification are not precise. Something that most consider as 3) may be considered as 1) by a few radicals. Christianity has a similar thing - some folks think every word of the Bible must be literally true, even though contradictions clearly exist if the stories are taken literally. (Example - the two creation stories in Genesis).

One major difference betwen Islam and Judeo-Christianity has to do with how those religions spread. Judaism existed long before its people had a homeland, and survived millenia of persecution and existence as a minority religion. Christianity was an underground movement for centuries before being adopted by Constantine.

But Islam spread like wildfire from its beginning, and achieved widespread dominance of much of the known world within the lifetime of its founder.

> Of course Christianity has/had Jerry Falwell, Jim Jones, Jim Bakker, the
>Crusades, etc...

The KKK, witch burnings, religious wars, and of course the Spanish Inquisition.

>and I can find nothing in the Bible that preaches the kind of
>INtolerance that Christianity has spawned.

Oddly enough, most of the war and violent actions occur in the "Old" Testament. The "New" Testament is full of "love thy neighbor as thyself", "turn the other cheek" and such. I seem to recall that Jesus and His disciples were pretty much all pacifists in the extreme.

> Maybe that's why I have about a zilch-point-squat tolerance for ANY
>organized "religion".

So since there are two sides to the story you're obligated to ride the fence.
Still,
and forever, never ever take a stand. Careful. Some fences are sharp.
With friends like you freedom need look out for its enemies. The Pogo
principle applies.

Do be careful on that fence, Jon. And please pass that concept on to
the rest of the Newington crew. Might save a few emergency room calls.

You guys need to read up on Islam. Any Muslim is always worth more than any number of Infidels, or non-Islamics. Take that concept far enough and you soon begin to see what our real threat is.

It was just a brief stop for a 2m mag mount antenna. My cheapy Pro-Am
1/4 wave had some mashed coaxial cable. The coax had a silly molded
fitting at the antenna end which precluded repair. I selected a Hustler
5/8 wave antenna and went on my way. There are lots of repeaters
between Columbus and Cincinnati but I made only four QSOs during the
drive. The longest and most pleasant was with a YL on the Cambridge
machine. I don't know where the abundance of Technician Class ops are
spending their time but it doesn't appear to be on 2m FM.

> We just might get through this thing if you're ready to open up a
> little.

I'm not really in the mood to "open up" on morse proficiency if opening
up means I need to declare that someone whose maximum morse speed is
five words per minute is proficient in the use of morse. That'd be
dishonest.

They have no future except their own graves. Even today these codeless stooges are impaling themselves by the thousands upon the gates of true ham radio. Their blood flows like a filthy torrent into 27MHz. All non-CW activity is a despicable lie, promoted by these congenital gangsters who have no sense of true communication. They should be hit with shoes. God will grill their bellies in hell, where they will fry in their own fat as their souls wail in lamentation.

I'm sorry I must have blacked out there for a minute. Did I say anything?

Very few pacifists are talking about martyrdom, Len. Most instead believe violence should be a very last resort - far beyond the use of force when it is just more convenient than an alternative.

> (snip) Pacifism is often motivated by personal fear.
> That is not a redeeming attribute. (snip)

Is is also inaccurate. Pacifist all over the world have placed themselves in danger while acting on their views. Indeed, many have faced public ridicule and harassment just for speaking out against violence (just look at your own messages for an example of that - you don't see them in this newsgroup talking about you). Others have faced much more serious consequences.

In reality, hiding in the majority, especially when violence is involved, is the truly safe route - it takes no effort and offers no personal risk. Which is more brave, the punk riding the shirttails of the bully or the person who stands up to the bully to say he is wrong? Which were more brave, the ones who went along with Saddam or those who stood up to say he was wrong?

It is amazing, isn't it? We spent years building up governments like Saddam's solely because they were willing to do violence for us, only to scream bloody murder when it no longer fits our agenda. Are we doing the same thing again - placing another violent government in Iraq to control the Iraqi people (control as defined by our political, military, or business interests). I truly hope Bush's words are much more than just rhetoric - that a government truly concerned for the Iraqi people, not just the political, military, or business interests of us and our friends, will be offered. Sadly, I think the temptation of this opportunity will be simply too much to resist - the Iraqi people will be screwed again and will continue to hate us for it.

> So we object to Saddam so we just struck out at him.

We now object to Saddam. As you well know, our government and military didn't do so for many years. Instead, we spend years building up his government with both political support and military aid. Perhaps if we not done so, our young men and women would not be over there today and the Iraqi people would have had freedom years ago.

But all that is in the past. The question now is what will happen next. Will we insert a government that is truly concerned with the interests of the Iraqi people or will it be a government more concerned with the political, military, and business interests of us and our friends? The rhetoric from Bush sounds good, but our actions (ignoring our allies and the UN) already suggests the worst.

The real threat, as I see it, is that millions and millions of people see the West in general and the USA in particular as empire builders who want to conquer and control anyone with anything valuable - like oil. I'm NOT saying that's an accurate perception!

Maybe the scenes of joyful Iraqis tearing down the statues of SH will help change that perception. Maybe Iraq can be rebuilt and reorganized into a free country whose govt. doesn't invade and threaten its neighbors. And maybe the rest of the UN can take some responsibility in the rebuilding process.

Or maybe the country will be torn by civil war and ethnic rivalry, while the world's focus is elsewhere. How much attention does Afghanistan get these days?

The real solutions lie in the follow-up work.

You're saying that all those Christian martyrs like Peter and Paul had no
courage. Most of them could have saved themselves by simply acknowledging the
deity of the Roman emperor. But they would not acknowledge the deity of
anything but their one God. Nor would they fight over it.

So is violence. It's obvious that Saddam was motivated by personal fear.

> That is not a
> redeeming attribute.

True.

> It isn't noble or on some "higher plane"
> when the motivation is purely personal.

What about when it's not?

> Is selfishness a noble attribute?

If it is logical selfishness, yes. It means that the person takes
responsibility for their own life. Martyrdom can be very selfish, because it
says that a person values their ideals more than their life.

> I don't think so.
>
Well, there you have it.

> Pacifism is a form of denial, an avoidance of responsibility,
> emotional selfishness.

Not at all. It's a different set of values. Ultimately, peace must prevail or
we will all be destroyed.

> Such grows into "noble thoughts
> higher than the common emotional level" when sheltered from

> harm...sheltered by the very "lower level" common folk the
> pacifists declare they "rise above." Nonsense.
>
Not at all. At one time it was common for disputes of all types to be settled violently. Then came pacifist ideas such as the rule of law and control of one's behavior. Once it was common and acceptable for parents to do physical violence to their children, husbands to do physical violence to their wives, employers to do physical violence to their workers, etc. Much of that has been eliminated from civilization. The same principles apply on a larger scale.

>am NOT the only one who has said so. There are others who have called the
>posting of "Newsline" here as spam.

Then write to them, coordinate an effort and be done with it. You've
spent more time making an issue out of it than spending time discussing
anything that was in the "news release" itself.

>It's not a matter of being 100% correct. It's a matter of DUE
DILLIGENCE...(SNIP)

I reiterate my previous question: "I refer to the general news media...are
they 100% right and completely unbiased 100% of the time?"

>Had BP tried to contact those on the other side of the
>story and was refused an interview, that would be different. I have been
>informed by those two individuals I mentioned in an earlier response that no
>contact attempt was made that they know of - despite the fact that one of
>them
>had a listed telephone number.

Making phone calls, travelling for interviews, etc, cost money. Even one
trip of one day's journey can rack up $100 of legitimate expenses, especially
in Southern California. One day's work can put him 1/10th of the way to that
$1K he is claiming.

>> I got your point. I repeat my question...The general news media is
>ALWAYS
>> 100% right or 100% unbiased...?!?!
>
>See due dilligence above.

You've not answered MY question, Dieter. When the "professional"
newscasters can't even gt it 100% right 100% of the time for the great amounts
of expenditures (and resources!) they have, why should a guy doing it part time
?

Yes...I agree that everyone should strive to get it right 100% of the time,
but I am NOT swayed by your argument that Mr. Pastrnak has made any great
imposition here. Certainly far more bandwidth has been expended here with your
arguing about where it rightfully belongs than if you'd said nothing and just

killfilled him.

>Circumstantially, YES:
>1) His competitor, Community Video Associates Inc., does the same thing as
>"Newsline" when they put together "This Week in Amateur Radio" yet TWIAR's
>expense is 10% of what Newsline's claimed expense is.

Wal-mart sells a great generic cola that sells for about .17$ a can...Do you think I should stop drinking Pepsi or Coke at .75$ just because someone does it cheaper?

>After eliminating the maintenance cost for
>the "instant update" phone line ($50/month - and that's generous;...(SNIP)

Unless he's having to pay for the phone as a business...Even 501(c)3 organizations have to pay "business rates" in many areas.

>2) Via a request of one of the member clubs, the Los Angeles Area Council of
>Amateur Radio Clubs asked in response to one of "Newsline's" requests for
>funding to identify the extent of the expenses. "Newsline" turned down the
>request. The only reason NOT to disclose, especially to a group which may
>potentially fund the activity, is if something illegal, illicit, or unethical
>is going on and the person performing that activity does not want to be
>discovered as having done it.

Does he have a legal obligaton to respond?

>Furthermore, I know of no counterindications that would otherwise explain the
>situation in a non-fraudulent way.

Well, Dieter, he's been doing this for a great many years now, and I KNOW his service is widely known by FCC staffers and the public in general. So tell me...WHY is it that no one of any consiquence has called into question his "service" before?

>If you don't believe me, ask him to explain his expenses and see what kind of
>response you get.

Does he have a legal obligation to respond?

>I wouldn't have a problem with that. RH may be unaware that BP is paying
>himself a salary, but I'm certain he's aware of the rest of it (i.e. the
>reporting activity). Unfortunately, it's this one fact that changes
>everything.

Other than making some kitchen table calculations on what you THINK he should be claiming as legitimate expenses, you've not said or demonstrated in any substantial way any fraud, Dieter.

>Definently 80%. I'm not certain that it would reduce by 95%; I haven't
>actually counted the posts. :-)

OK...I'll buy your 80%!

>The only reason I haven't done so yet is because I don't have sufficient
>PROOF.
>I have only the indications.

Well then...There we are.

>However, you will find that for each post he has made here with the
>"Newsline"
>script, a complaint has gone to his ISP for violating the newsgroup charter -
>and NOT ALL of those complaints over the past 6 months have come from me. If

We're going to lose some frequencies if the only thing going on are
the repeaters automatically IDing every hour. Perhaps Len is right.
Pretty soon amateur radio will be only about HF.

ARES on 147.06 in Lancaster had a nice net last night. Lots of public
service events coming up.

Dave, I wouldn't want you to be dishonest. Here's what I can do for you. I recall that you stated that "20wpm is more proficient than 13wpm." I'll tabulate all the wpm rates between 13 and 20wpm and you can select the lowest one at which proficiency is achieved. We won't even bother with 5wpm.

OK. Here goes:

14wpm
15wpm
16wpm
17wpm
18wpm
19wpm

OK, which one is where proficiency begins?

Brian

>
>
> It is amazing, isn't it?

Not at all. Totally predictable. It's like selling a psychotic a gun
and then being shocked when he turns it on you. Long history of that
sort of thing - the USA sold Japan all sorts of technology and raw
materials in the '20s and '30s.

> We spent years building up governments like
> Saddam's solely because they were willing to do violence for us, only to
> scream bloody murder when it no longer fits our agenda.

The basic policy has been something like "we have to support these
people in order to counter the Soviets, who are even worse". Plus
America "needs" cheap oil. End justifies the means, all that sort of
rot. Not much thought was given to exactly who was being empowered.
And it turns out that the Soviets were as scared of us as we were of
them.

What really needs to change is the policy of Western republics blind
acceptance of repressive regimes based on convenience or a perceived
bigger threat.

Not dealing with some repressive regimes might mean things like
more-expensive gasoline. Are Americans willing to make that sacrifice?

> Are we doing the
> same thing again - placing another violent government in Iraq to control the

> political, military, or business interests of us and our friends, will be
> offered. Sadly, I think the temptation of this opportunity will be simply

> too much to resist - the Iraqi people will be screwed again and will
> continue to hate us for it.

There's actually a whole bunch of issues to muddy up the situation. Who are "the Iraqi people" - Kurds, who have little loyalty to any Bagdad govt.? Shiites? Sunnis? The concept of nation-states is a very Western one.

And of course there's big money at stake. With SH gone, who owns Iraq's oil? How will the new oil money be spent, since the sanctions will finally be lifted? Will the Iraqi people get a piece of the action, or will it be like the breakup of the Soviet union?

Don't be surprised if France, Germany and Russia wind up getting all their investment back (with interest) without having sent one soldier or any money to support the war or the rebuilding.

Reaction in the Arab world seems to be mixed. Some are jubilant that the tyrant is gone, and Iraq has a much brighter future. Others are angry and even sad that the allegedly "elite" Iraqi army and Republican Guard crumbled so fast. Did the USA make more friends or enemies by this war? Too soon to tell.

Most of all, it's not over yet. Parts of Iraq are still not under coalition control, and there are non-Iraqi fighters (a la the Afghan mujahadeen of the '80s) engaging coalition forces. No WMDs have been found yet, which raises some scenarios:

1) There never were any WMDs (not very likely)

2) There were WMDs, but SH destroyed them all (only a little more likely than 1)

3) There are WMDs, they just haven't been found yet (we all hope this is true, but wishing doesn't make it so)

4) The WMDs are now in someone else's hands, somewhere else. This is the scariest scenario, because they may turn up where we really don't want them.

(comedic interlude)

Didja ever notice how the most famous of those leaders always has a
three-day beard? How does he DO it? If somebody shaves every three
days, then there's a 33% chance they'll have a 3 day beard, a 33%
chance of a 2 day beard, and a 33% chance of being clean-shaven. But
that guy ALWAYS has a 3 day beard!

(end comedic interlude)

So I could move there and get citizenship if I were willing to fill
out the forms, learn the information required on the citizenship
tests, and pledge allegiance to the republic.

Which means that if enough Palestinians did the same thing, they could
eventually take over. But that would take some time.

Indeed:
http://www.ctnow.com/news/opinion/op_ed/hc-afghan0410.artapr10,0,1275296.story

Key quote:

"To make matters worse, Afghanistan's politics and stability are beholden
to warlords who were in power before the rise of the Taliban. These
warlords are despised as the main cause of corruption and tyranny.
Democracy and free markets will never take root in an environment
dominated by them. Unfortunately, the re-emergence of these warlords is
directly related to U.S. financial and military support, which is the sole
source of their power."

Of course, that's probably just a lot of liberal whining, eh?

>> I truly hope Bush's words are much more than just rhetoric - that a

>> will continue to hate us for it.

More likely is that, as in Afghanistan, we'll get tired of nation building
(which before 9/11 Bush said repeatedly was something he didn't think we
should be doing) and leave Iraq to find its own way. The result won't be
pretty.

> There's actually a whole bunch of issues to muddy up the situation. Who

True, but it's one that the powerful in the Middle East are committed to
because, well, they're in power.

> Don't be surprised if France, Germany and Russia wind up getting all

And as a bonus, "Tommy points" from the Arabs and the profitable business relationships that go with them. (If you're not a Celts fan you may not know what Tommy points are. Closest equivalent: attaboys.)

> 4) The WMDs are now in someone else's hands, somewhere else. This is the
> scariest scenario, because they may turn up where we really don't want
> them.

You're missing the beauty of it, Jim. No WMD in Iraq? That's because they got moved to Syria. We'll have to go get them. (Three weeks later...) Ooops! No WMD in Syria? That's because they got moved to Yemen. Better go get them... rinse, repeat, ad infinitum.

Jon

>violence should be a very last resort - far beyond the use of force when it
>is just more convenient than an alternative.

Pacifists aren't doing any martyrdom in this country. They
don't have to worry about long-term imprisonment or death.
Only the violent pacifists will have to worry about an over-
nighter in the pokey.

It is very easy to be a pacifist in the USA. Pacifists can feel
safe and protected by the guarantees of the First Amendment.
No problem. Trouble is, those pacifists haven't thought further
about how come we still have those guarantees after almost
227 years of national existance.

Those guarantees didn't happen by magic or divine inter-
vention. They haven't remained in place, guaranteed, because
a group of self-righteous noble-thinking "we are the moral
superior" pacifists refused to participate in keeping those
guarantees in place.

>> (snip) Pacifism is often motivated by personal fear.
>> That is not a redeeming attribute. (snip)
>
>Is is also inaccurate. Pacifist all over the world have placed themselves
>in danger while acting on their views.

Okay, give them a medal and a pretty certificate, broadcast the
ceremony on international television.

Dwight, there's a difference between the oxymoronic "active
pacifists" fomenting a revolution in order to be free of oppression
and the pacifists I'm describing. Real Pacifists won't fight for
anything. They absolve themselves of responsibility, lay back,

refuse to take action. Not to worry in the USA. Some editor in journalism will pick up on that, toss in some "noble" adjectives and "moralism" titles and they are given publicity.

You may have forgotten the "hell no, we won't go!" shouting and hollering of the 1960s. Most of that shouting was done by young people who faced conscription into military service. They feared "dying in Vietnam." They felt they were "too good for lower-class military service." They were moral superiors. As a more noble group they felt entitled to enjoy the guarantees of a better life. Those guarantees had been kept in place by "lower class, less morally superior" citizens in a very large world war and a smaller one in northeast Asia and the beginnings of the MAD standoff between the USSR and USA, held in place by the resolve and work of non-pacifists.

>Indeed, many have faced public
>ridicule and harassment just for speaking out against violence (just look at
>your own messages for an example of that - you don't see them in this
>newsgroup talking about you). Others have faced much more serious
>consequences.

You have forgotten the returnees from Vietnam being spat upon and ridiculed by the morally-superior peaceniks in the 60s and 70s. You have forgotten the rash of anti-war motion pictures of that time and the media portraying the military and government as instruments of evil. The peaceniks and media felt safe doing all that...the guarantees of the US Constitution permitted them free speech. They felt morally superior. They felt safe to express themselves. Guarantees of safety were the responsibility of the lower-class, less superior people. It wasn't the nobles' task. They were owed it, they felt. Noble people feel like that.

There hasn't been any conscription in the USA since 1973. For a few months longer than 30 years the USA military has been all-volunteer. In those three decades a few things happened that threatened our guarantees and the fates of several nations besides our own. Pacifists didn't help keep our guarantees or take action.

The USSR dissolved, not from any actions of pacifists, but from the inherent socio-economic faults of communism. The Germanys united and "the wall" fell from action, not a result of pacifism. No pacifists stopped the nation of Iraq from invading their tiny neighbor. Pacifists didn't deter the hijacked airliners crashing into the WTC and Pentagon. Activists in the fourth plane took over before it could strike any target. Pacifists didn't remove the Taliban from Afghanistan...activists are removing the last vestiges even now.

> In reality, hiding in the majority, especially when violence is involved,
>is the truly safe route - it takes no effort and offers no personal risk.

"Safe?" In a perverse way, death is "safety." In an environment where one may be killed for opposing a regime by not worshiping it, there is an infinite amount of risk.

>Which is more brave, the punk riding the shirttails of the bully or the
>person who stands up to the bully to say he is wrong?

[mental picture of a single Chinese male "opposing" a tank in Tienanmen Square] "Standing up" against the bullies is sometimes idiotic. That Chinese individual could have become a bloody mass of protoplasm in a few seconds, trying to "stop" 30-odd tons of tank. Very emotional TV moment...and also almost a videobite of martyrdom.

>Which were more brave,
>the ones who went along with Saddam or those who stood up to say he was
>wrong?

The USA and UK for standing up against the do-nothing world opinion is the most brave, especially all those volunteers of the US military. That's my answer. It isn't an answer for your loaded question.

Most of those who thought Saddam Hussein was wrong were either silent or dead. There was no guarantee of free speech in Iraq. There was no glorifying videobites of pacifists on Iraqi TV protesting the invasion of Kuwait a dozen or so years ago. Perhaps some Kurds in northern Iraq were pacifists...we don't know...several hundred were gassed to death. Pacifists didn't stop the 8-year Iraq-Iran war...the UN took some action because world oil supplies were being affected. Iraq and Iran got hand-slaps. Iran had a revolution and revolutionaries took over the US Embassy in Iran, imprisoned the staff. USA didn't take enough action. About two years after the end of the Iraq-Iran War, Iraq invaded Kuwait. A coalition led by the USA kicked out Iraq. Pacifists didn't do it but their nobility rose to the top and demanded "go no further!" Pacifists don't want to do anything. They are above such things as actually doing something. They are morally superior.

Here, have a flower...

> can select the lowest one at which proficiency is achieved. We won't

> even bother with 5wpm.

I've also stated that 25 wpm is more proficient than 20, 30 wpm is more proficient than 25, 35 wpm is more proficient than 30 and 40 wpm is more proficient than 35.

> OK. Here goes:
>
> 14wpm
> 15wpm
> 16wpm
> 17wpm
> 18wpm
> 19wpm
>
> OK, which one is where proficiency begins?

To further add to your confusion, I've stated that I believe morse proficiency begins at a point somewhat higher than 10 wpm. You'll need to begin typing numbers from 11 through 40. The answer will be in there somewhere.

Excluding the "tabloids," they may not be 100% correct, but they TRY, and when possible, confirm a situation from multiple sources and attempt to solicit the other party's side - that's due dilligence - lacking here.

Yes, and his competitors do it for $100/MONTH, not $100/day. It's obvious that his expenses are overinflated.

Killfiling someone (i.e. filtering) is a LAST resort in fighting spam. Getting
the spammer to stop and/or closing him down is always an earlier step.

I am aware of that - and even if the "instant update" line is on the business
measured rate, most if not all of the calls are INCOMING, which means the cost
isn't charged to that line. My local phone book indicates that this rate is
$19.22/month for single-line business measured rate customers (plus $0.04 for
the first minute and $0.01/min for additional minutes under the measured rate
for OUTGOING calls - which from this line should be none). Add the $6.00 FCC
Long distance access fee and local taxes, and one arrives at a cost per month
in the neighborhood of $30.00. Out of the other $20.00 (since I said $50), I'm
assuming the cost of calling to upload the new message each week. All other
calls are assumed to be in the $100/month overhead that the competitor also
incurs.

> >discovered as having done it.
>
> Does he have a legal obligaton to respond?

If "Newsline" is a non-profit organization, YES, he is required to respond else face losing the organization's non-profit status. He can choose to make the inquiring party file a request for the form 990 or form 990PF to the IRS to get the information (26 USC 6104(b) or (d), the latter for "private foundations") but may not fight such a request. The application (IRS form 1023 or 1024) for non-profit status is also subject to inspection (26 USC 6104(a)). If "Newsline" isn't a non-profit organization, then under the Internal Revenue Code, it is by default a FOR PROFIT business, and thus the violation under 47 CFR 97.113 has occurred (specification: Preparing the content of an amateur radio transmission for profit - thus being indirect compensation for a transmission).

> >Furthermore, I know of no counterindications that would otherwise explain the

> "service" before?

Some people have. They just haven't stayed with it like I have. Just because he's gotten away with a violation of law doesn't mean that what he did is legal because he hasn't been prosecuted (civilly or criminally), nor with the continuation of the activity does the period of limitations close.

> >If you don't believe me, ask him to explain his expenses and see what kind of
> >response you get.
>
> Does he have a legal obligation to respond?

If he doesn't, file an IRS form 4506-A and get the information from them. If there's no application for exempt status (form 1023 or 1024) on file, then the organization isn't exempt and my case is proven.

I actually did do this exact thing with regard to one of our area repeater coordination groups about 7 years ago. This was during a period of time where that particular group wasn't even mailing acknowledgements for "request for coordination" applications (nor acting on them). After finding out that the group didn't have non-profit status (via a request to the IRS on form 4506-A), I filed a complaint to the NFCC challenging their legitimacy as a repeater coordinator. About 6 months after that, this group all of a sudden started having regular meetings and started acting on RFC applications (granting some of them). Considering that at least one, if not both of the other repeater coordinators for "socal" does have IRC 501(c)(7) non-profit status, you should be able to figure out which group I'm talking about. :-)

> >I wouldn't have a problem with that. RH may be unaware that BP is paying

>
> Other than making some kitchen table calculations on what you THINK he
> should be claiming as legitimate expenses, you've not said or demonstrated in

> any substantial way any fraud, Dieter.

I agree that I haven't absolutely demonstrated it. I have demonstrated strong indications of fraud that this organization refuses to produce any evidence to counter. Based on what I know, I have no reason to believe that my assertion is false and I have those indications which point ONLY to the assertion being true.

> >Definently 80%. I'm not certain that it would reduce by 95%; I haven't
> >actually counted the posts. :-)
>
> OK...I'll buy your 80%!
>
> >The only reason I haven't done so yet is because I don't have sufficient
> >PROOF.
> >I have only the indications.
>
> Well then...There we are.

Note however, who controls the proof. If the indications are false, the organization has been challenged on it (not in a way that accuses them; just a request for justification of expense) and has failed to produce anything that may counter the indications. Also, this is not the first time I have indicated this on this group, and the organization's members do supposedly scan this newsgroup - so where is their rebuttal?

> >However, you will find that for each post he has made here with the

As I said before, filtering is not the optimal solution to fighting spam. The best solution is elimination at the source.

Thats true, its just stating statistics. However, chosing how you look at the numbers is another story.

>However the fact can then be used
>to support advocating Morse.

Thats what I mean. Chosing to look at the numbers that way is advocating Morse code.

N2EY claimed more Morse code sales indicates Morse code is growing, which means more poeple are interested in it, which means Morse code is more useful (according to N2EY's logic).

>proficient than 25, 35 wpm is more proficient than 30 and 40 wpm is more
>proficient than 35.

Thats common sense. What is the lowest rate of proficiency?

It could depend on reflex, then its 10 wpm. It could also depend on "pleasant" sounding word rate. Channel capacity, as someone pointed out.

What's your definition of proficiency, and whats the number?

>To further add to your confusion, I've stated that I believe morse
>proficiency begins at a point somewhat higher than 10 wpm.

The studies show 10 wpm is the speed of proficiency.

After having 10 wpm, you lose your ability to do 5wpm. Therefore, 10 wpm is not more proficient than 5 wpm - they are two different skills.

In some real-time encoding schemes, both reflex and non-relex real-time encoding is desired. (Imagine having 10 wpm, but not losing your 5 wpm real-time encoding skill).

As Morse code is finite, and used for communication, this is not the case here. The goal for Morse coders is to get 10 wpm or higher <real-time encoding> speed.

Pointing out the increased numbers is merely stating a fact. In and of
itself that is NOT advocating anything. However the fact can then be used
to support advocating Morse.

>They have no future except their own graves.
>Even today these codeless
>stooges are impaling themselves by the thousands upon the gates of true
>ham radio. Their blood flows like a filthy torrent into 27MHz

Your ignorance leads you to believe that. Some no-coders know alot more than some Extras. Its better to be lean (without code) and mean than fat and sluggish.

Only an appliance operator would refer to 27MHz as a bad segment, which shows you bought into the cult and have a limited view of amateur radio (appliance operator group).

>All
>non-CW activity is a despicable lie, promoted by these congenital
>gangsters who have no sense of true communication.

That's what the Church of CW would like you to believe. If all non-CW activity is a lie, would you like broadcast radios to have only CW broadcasts? Of course not.

Its actually the CW "gangsters" that tries to recruit with Morse code and pressure amateurs to learn Morse code. Their recruitment of amateurs comes with the heavy recommendation (or pressure) of Morse code.

They use deceptive media tactics, such as claiming accomplishments where there are none, using the best to represent the whole, claiming to participate in technical aspects (such as homebrewing), while really hating it, and other methods to spread their lies. The methods and lies told by the Morsers are what's "despicable".

Dots and dashed, abbreviations and codewords are not true communication.

>They should be hit
>with shoes.

No, free choice is the answer. Unfortunately, they may recruit through Morse, but drive away quality. Unfortunately, that does not look good to regulators.

>God will grill their bellies in hell, where they will fry in
>their own fat as their souls wail in lamentation.

God is not in hell - the Devil is. Long-time Morsers tend to have more fat. Less physical activity does that, you know.

>I'm sorry I must have blacked out there for a minute. Did I say anything?

You must have been possessed. Once you see the truth, you will be outraged.
Lets just hope its not too late.

> >proficiency begins at a point somewhat higher than 10 wpm.
>
> The studies show 10 wpm is the speed of proficiency.

The "studies"? Your one source is the final authority?

> After having 10 wpm, you lose your ability to do 5wpm. Therefore, 10 wpm is not more proficient than 5 wpm - they are two different skills.

That'd be true if it actually happened. Someone who is proficient in morse at 35 wpm does not lose his ability to copy 5 wpm. Why don't you attempt to argue something about which you are knowledgeable?

> In some real-time encoding schemes, both reflex and non-relex real-time encoding is desired. (Imagine having 10 wpm, but not losing your 5 wpm real-time encoding skill).

I can imagine that at any time.

> As Morse code is finite, and used for communication, this is not the case here.
> The goal for Morse coders is to get 10 wpm or higher <real-time encoding>
> speed.

It is quite obvious that you have no understanding of the subject.

Dee,

I was hitting numerous repeaters from my mobile. I know that if I can
hit them from the car, it'd be quite easy for someone operating from any
little burg to hit them. Ohio has a large number of hams.

Jon:

As long as Americans desire to remain a free and independent nation, we
will always have to defend ourselves. We didn't become free and
independent by negotiation and diplomacy. We struggled, fought, and
sacrificed in order to earn our freedom. We then rose to become the most
powerful nation on the planet, and we use our power to export the freedom,
justice, and democracy which we have come to take for granted. We are
not exporting misery, as the (hopefully) late Saddam Hussein and his
regime had been doing. I think it's about time that Americans stopped
"giving a damn about what other people think" in a much bigger way.

Dwight:

So you're opposed to the war. Fine, be that way. Just thank God you're an American, and you won't be thrown feet first into an industrial plastic shredder for disagreeing with the government. You will simply be dismissed as a hopelessly misinformed, intellectually lazy, physical coward -- as your response would indicate.

BTW, the newly free people of the city of Baghdad have spent the day rejoicing and tearing down statues of Saddam Hussein. A curiously odd response for people who were victimized by us nasty old Americans trying to impose our will upon them!

I don't think it is much of a thought experiment. We will eventually have to pay for these conflicts and our government loves to hide taxes in consumer goods and services. By doing so, people never fully realize how much taxes they're actually paying to the government. Therefore, I expect gas taxes to increase just like the many other hidden federal taxes will. And, for those who do realize it and complain, there will be people out there saying it is necessary for defense (defense = war - today's wars are never described as war). Heck, as you probably well remember, this was routine stuff during the cold war.

Yes any one in any little burg can hit them but some of those little burgs are so small that the one or two hams in them aren't listening all day. In Columbus, no problem, plenty of people to talk to. In Cincinnati, no problem, again plenty of people to talk to. But in between is a very different story. That stretch between these two cities is very low in population density.

>
> Yes, from a source that advocates Morse code. Do you have a better source?

Not only better, I have more than one. Maybe if you do some research,
you can find more and better sources. Try not to rely too much on the
internet.

In future, you might run across this quote:

"A large number of those attempting to increase their morse code copying
ability seemed to hit a wall at a speed of about ten words per minute.
It proved difficult to move beyond the ten word per minute level no
matter how often or how long the practice sessions. After a long period
with little evident increase in copying speed, a breakthrough would be
achieved. A student would find that his speed had suddenly gone from
ten words per minute to thirteen or even fifteen."

"One way to limit the effect of the 'wall' is to always practice with
code five or ten words per minute faster than you can comfortably copy.
Make no effort to write down the characters. Just copy along in your
head. Don't worry about missing a few letters or even an entire word
here and there. You'll find that with each practice session, you are
able to copy more and more of the text. In a very short time, your code
speed will increase markedly." --Dave Heil K8MN

Good luck in finding other source material.

> >> Channel capacity, as someone pointed out.
> >

> >to us.
>

> I'm not surprised that a Morser would not know about channel capacity.

What's a "morser"? My neighbors had a cat which was a pretty good mouser.

Channel capacity isn't a factor in morse proficiency. You can either copy a particular speed or you can't copy it. We don't even need a channel. Just sit in a room with me and copy code. You're trying to make this too difficult, Vipul.

> >Someone who is proficient in
> >morse at 35 wpm does not lose his ability to copy 5 wpm.
>
> Maybe not for you. After not using at 5wpm, others may forget.

Not "maybe". Not for me and not for any good morse op known to me. Again, why not discuss something with which you are familiar instead of trying to impress me with your tap dancing?

2216. Article in World Radio

Newsgroup: rec.radio.amateur.policy
Date: 2003-04-11 04:02:38 UTC
From: "Ryan Lughermo, KC8PMX" <kc8pmx@diamondcs.net>
Message-ID: <b76f1k$be9jq$3@ID-189073.news.dfncis.de>
Source record: 64478

I personally have not seen the exact text, but recently in the magazine World Radio there was an article by James Wades, WB8SIW referencing amateur radio and public service. In this article from my understanding he makes a comment in regards to the idea that only 2% of hams participate in public service activities and the rest are "freeloaders."

I hope to locate the text to get a better "read" on the article, but was wondering what your comments are? I see some of the point of this article possibly, in reference to the public service/emergency service communications are the "justification" of our vast allocations that we are afforded.

Knowing Jim personally from a meeting before, my read on his personality is that he is one that is "never wrong, no matter what," so the comment is not much surprise. He however is a EXTREMELY intelligent person who also is extremely active in NTS and other traffic activities, and has published a wonderful text regarding nets and traffic handling etc.

I don't know of any one who has lost their ability to copy at 5wpm after advancing to the higher levels. It just doesn't happen. Generally the problem is they get so bored at that slow speed, they fall asleep! Figuratively speaking that is. When I was that slow, people on the air did slow down for me and chatted with me a while, but did bail out after a short QSO simply because the slow speed was boring.

Dee,

I don't think we have a connect here. There are lots of little burgs
with a few hams in them. You'd think at least some of them would be
listening to the repeaters they can hit. Also, I wasn't limiting my
discussion of the areas *between* Columbus and Cincinnati--I was
including those two large metro areas. There are few folks to be found
on 2m FM, even at "drive time". Maybe they're all night owls. I wasn't
on during the evenings. I make this particular drive on different days
of the week and about six times per year. The day of the week or time
of day don't seem to make much difference.

I listen to repeaters in my local area both earlier and later in the day
and I find little activity outside of specific net times. I was in
Pittsburgh all day yesterday and found activity on two of the
metropolitan Pittsburgh machines for short periods during the hours
between 8:30 AM and 6 PM. Total operators involved--perhaps six.

Again, where have all the 2m FM ops gone? Where are all the new Techs?

Dave K8MN

Welp, I don't think so. You said that "20wpm is more proficient than
13wpm." And above, you -claim- to have stated that "40 is more
proficient than 35 which ismore proficient than 30 which is more
proficient than 25 which is more proficient than 20."

Why do you want me to restart the list at 11?

Do you think proficiency begins at 11wpm?

If so, why do you think it?

It is a fact.

>> - What was Palestine like before 1948 in terms of
>> agriculture, industry, education, civil rights?

> Did Palestine exist as a separate entity prior to 1948? I honestly
>don't know.

It was part of the Ottoman Empire until the end of WW-I and
then part of the British Mandate territory until the War of
Independence (1948) which followed the end of the Mandate.

The name "Palestina" was "bestowed" upon the land by the
Romans after their conquest about 2000 years ago, but we Jews
always referred to it as Eretz Yisrael (The Land of Israel).

What are now referred to as "Palestinian territories" were
occupied and administered by Jordan (the West Bank, which we
refer to as Judea and Samaria) and Egypt (Gaza) at the end of
the British Mandate and were never independent. They were
liberated from those countries' control during the Six Day War
(1967) and their disposition has been in dispute ever since. In
the Oslo Accords (1992), Israel agreed to give 92% of the area
to the Arabs for a separate state upon lasting peace guarantees,
which were not forthcoming, so the territory remains in dispute.

Does it exist as a separate entity today? There are lots of
us who say no.

> They feared "dying in Vietnam." (snip)

Ah, now I get it. You're confusing pacifists with those opposed to a particular war. Millions of Americans opposed the Vietnam war, including many millions who were certainly not pacifists and were far too old to be drafted. This included college professors opposed for intellectual reasons, religious people, parents afraid of losing children, grandparents afraid of losing grandchildren, wives afraid of losing husbands, people who didn't like the reality they saw on television every night, people shocked at seeing unarmed students being shot on American college campuses by soldiers, active duty military personnel who were tired of that seemingly endless war, veterans who remembered well what was really happening over there, and, in the end, the vast majority of Americans at the time.

And, yes, that certainly included some young men who were afraid to die and didn't feel the government had a right to force them to do so (using the draft). And, even though I enlisted into the Army at the time, I didn't then, and I don't now, support a military draft.

> (snip) The USSR dissolved, not from any actions
> of pacifists, but from the inherent socio-economic
> faults of communism. The Germanys united and
> "the wall" fell from action, not a result of
> pacifism.

Actually, the wall fell mainly because of changing attitudes in Europe. Germany had recently opened up new trade with Russia, Margaret Thatcher was openly talking about the same, France and Germany were helping to build an oil pipeline into Europe from Russia, polls showed most in Europe were more afraid of the US under Regan than the USSR under Gorbachov, and so on. Mikhail Gorbachov quickly realized Russia was better off doing business with Europe than continuing an endless cold war. It was only at that point the wall came down.

Regan had no idea what was happening at the time. The White House was still talking about no confirmation while CNN was showing East German soldiers rolling up barricade wire and using cranes to lift sections away (with Germans breaking off pieces of the wall for souvenirs). In spite of that, Regan held a press conference days later to claim credit for the situation.

By the way, my wife and I were living in Germany, and both working for the military, up to about a year before the wall came down. Even at that point, it was clear things were changing between Europe and Russia - that the wall was coming down soon. I even told friends here about it at the time. Therefore, we were not at all surprised to see the wall come down - only sorry we were not still there to see it ourselves.

That was not the UN mandate at the time. The original purpose of the organization was to "preserve peace, advance justice and constitute a permanent structure for international cooperation." The UN Charter at the time said nothing about rebuilding nations after a conflict.

Perhaps if this country had not imposed its will upon them twenty years by backing Saddam Hussein, those people would have been dancing long ago and a few hundred thousand Iraqis would not have died in two wars. Of course, the cameras will never show the Iraqi families who lost love ones crying, will they? Yes, I do oppose this war - I find it very distasteful to kill that many people to fix the mess this country helped to create. I clearly would have preferred a more peaceful solution.

We have done much of that, to our everlasting credit.

> We are
> not exporting misery,

Unfortunately, we HAVE caused a lot of misery, usually by propping up dictators who we think serve our interests. Remember, Saddam received substantial assistance from the US during the Iran-Iraq war of the 1980s. He was no less brtual then, and we were well aware of it. But we saw him as a counterweight to the mullahs in Iran, so we helped him retain power.

It depends who the other people are. The Saddams, Hizbollahs and Islamic Jihads need to be defeated. But why make enemies of those who agree that they need to be defeated but have different views of how to do it?

While it's certainly true that American assistance was critical, the Europeans themselves did most of the heavy lifting -- literally as well as financially.

And it's not like the Marshall Plan was altruism. Its purpose was to promote free-market economies and to prevent the spread of communism in Western Europe by repairing the social fabric of that region. (Eeek! Social work! Must have been a bunch of damn liberals!) It was done, in short, to serve our own interests as well as those of the Europeans. There's absolutely nothing wrong with that, and we have a right to a certain amount of pride, but we should remember as we polish our halo that we, too, benefited.

> What shred of
> evidence do you have which indicates that history will not repeat itself
> in the case of Iraq?

For one thing, there are others who CAN help now. In 1948, who besides the US was in a position to supply significant financial help? Also, both the UN leadership and the leaders of some of the key UN member countries have expressed a willingness to help rebuild Iraq. That said, the bulk of the money will probably come from the US. If things go well, however, that money, like that of the Marshall Plan, will have been well spent.

To further your claims, several central and southern Ohio repeaters are linked throughout the state, and even across several states. If anyone is listening, they're listening for specific people, not your average traveler.

I've programmed in every possible 2M repeater pair, and every 2M FM simplex frequency, with 146.52 my "priority" frequency. I put my radio on scan when I'm in my car. It's generally a waste of electricity. Very few times do I hear anyone talking outside of drive time and then only on a couple of repeaters.

Where have all the hams gone?

Some of us learned long ago. Others are still learning. Some will
never learn.

>Is there any hope?

Definitely yes!

>I simply don't see it.

Consider how acceptable violence and repression used to be, even in
civilized Western republics like the USA.

Husbands beat their wives, parents beat their children, employers beat
their workers and the workers rioted in return.

Slavery - the actual treatment of human beings as property - was
legal and protected (by force) in much of this country until only 160
years ago. A country that promised "all men are created equal" and
"freedom and justice for all".

Except for a few land purchases here in the East and some remaining
"reservations", most of the USA's land area was obtained from its
original inhabitants by force of arms.

But today almost all of that sort of behavior is considered
unacceptable, and forbidden by law. Long slow progress, but progress
nonetheless.

Or consider this: Women got the right to vote in the USA in 1920 -
almost 150 years after the nation's founding on the principle of "all
MEN are created equal". Did they have to use violence to get it?

Weapons of mass destruction are a relatively new thing, compared to
the long sorry history of warfare. Fortunately the people who make the
decisions are pacifist enough not to have used them since 1945.

Coalition air forces could have turned Bagdad into another 1945 Dresden or Tokyo, but they chose not to, and used precision rather than brute force. Not perfect but better.

The mission of pacifism in the 21st century is to oppose the policies that lead to wars, and go after them long before the shooting starts. It's clear that support of SH and the Afghan mujahadeen in the 1980s were mistakes. The challenge is to not make those mistakes again.

You didn't respond to my question, I'll try again but with a different
spin: What makes you think we won't approach the reconstruction of
Iraq differently from the way we handled the same problem in Europe?

> The UN Charter at the
> time said nothing about rebuilding nations after a conflict.

Right. The bottom line then is the same as it is now. We didn't need
the UN then to get the job done and we don't need the UN again to get
the job done. As in history does tend to repeat itself doesn't it?

Historically I've been a rather strong supporter of the UN but after
this debacle to hell with it. WHO and UNICEF work. The rest is all
about a bunch of niggling socialist non-entities who pick our pockets
then kick us in the ass.

138 years. But who's counting? :-)

> Weapons of mass destruction are a relatively new thing, compared to the
> long sorry history of warfare.

Yes, but not as recent as people may think. The Greeks tossed infected bodies into besieged cities in a crude form of biological warfare. In the French and Indian War, British general Amherst distributed blankets infected with smallpox to aid in exterminating the Indians.

> Fortunately the people who make the

Pacifist enough, or not desperate enough?

> Coalition air forces could have turned Bagdad into another 1945 Dresden

> force. Not perfect but better.

Vastly better for the residents of Baghdad.

> It's clear that support of SH and the Afghan mujahadeen in the 1980s
> were mistakes. The challenge is to not make those mistakes again.

SH, yes. In the case of the mujahadeen, it's not so clear. They, at least, were acting in legitimate self defense. The error in Afghanistan came after the Soviets left when we abandoned the progressive elements of Afghan society, allowing the warloads and eventually the Taliban to take control and set the country back hundreds of years. Had we engaged in that nasty ol' nation building then, 9/11 probably would never have happened. 9/11 happened not because of a lack of warmaking but because of a lack of peacemaking.

What IS hopeful is that the Administration is saying it's committed to rebuilding Iraq. I hope that's true, because if we don't it will turn into Afghanistan squared. But when it comes to this Administration, I'm from Missouri.

You really have to take some steps to deal with that reading
comprehension problem of yours. Since I've stated that I believe that
morse proficiency is somewhat higher than ten words per minute, any list
would have to begin with a number higher than ten. The number "11"

qualifies.

> Do you think proficiency begins at 11wpm?

No.

> If so, why do you think it?

I don't "think it".

I should hope that it is unacceptable. I certainly don't want the descendants of the original inhabitants showing up around here attempting to regain their land by force of arms. After all, I paid for it.

> Or consider this: Women got the right to vote in the USA in 1920 -

Not as long as there were men willing to do almost anything to avoid the sharp-tongued nagging of a spouse or who were interested in having meals prepared or saw the benefit of sex on a regular basis. Voting rights for women was the easy hurdle compared to the very real crisis now before us: Do women have a right to membership in an all male, private golf club? The Great Cincinnati ARA Stag Hamfest name was changed a couple of decades back and it has been all down hill from that point.

> Weapons of mass destruction are a relatively new thing, compared to

Way back when I was a kid living in this area in the 1950's, a chemical plant a short distance down the Ohio had two huge storage tanks full of mustard gas, a World War I-era relic. The tanks were poorly secured and in poor physical condition as evidenced by their rusty surface. I shudder to think what would have happened should a tank rupture have taken place. Those tanks are long gone but a number of chemical plants in the area still produce or use some vile stuff like phosgene. If a large enough quantity of that stuff ever gets loose in the narrow Ohio Valley, the descendants of the original inhabitants won't even need to use force to reclaim their land.

In the final analysis we did more, much more than anybody else even
thought about doing or were able to do for their friends & allies.
Would the French have done what we did if they were able to do so? As
if.

The indisputable bottom line is that we saved hundreds of millions of
Western Europeans from living like the Poles, Hungarians and the
Czechs did for 45 or so years. Considerations of altruism or not aside
who benefitted most, the citizens of France and Italy for instance or
us who are at least 3,000 miles away from all of them? I think you
agree with me in this respect.

Pffft! WHAT "UN leadership"? I still don't have qsl cards from some of those "leader's" non-entities.

> and the leaders of some of the key UN member countries have
> expressed a willingness to help rebuild Iraq.

Those turkeys spent twelve years locked in debate and doing nothing while Saddam Huessein spit in their faces and now they suddenly want to do something "useful" in Iraq? After 100+ Yanks gave their all to depose the swine after "The UN" postulated even more aimless endless debate about whether somebody should go in and get the job done or not?

> That said, the bulk of the
> money will probably come from the US. If things go well, however, that

I basically agree with that WRT to the current situation. What I do not agree with however is the notion that the UN as a body has some inherent right to tell us how much patience we need to develop for that organization's impotence. While they do nothing and we fund it.

I do, but I don't look down on those we helped just because we helped
them, or because they haven't prostrated themselves at our feet in
gratitude.

>> For one thing, there are others who CAN help now. In 1948, who besides
>> the US was in a position to supply significant financial help?
>
> Nobody. Which is my point.

But others are in a position to supply help in this case. You asked for
evidence that history won't repeat itself. One element of that is that it
is at least POSSIBLE that others will help now. It was IMPOSSIBLE after
WW2.

>> Also, both the
>> UN leadership
>

Doesn't that also describe the behavior of the US until last year? Do you
think the US would have attacked SH had it not been for 9/11?

> and now they suddenly want
> to do something "useful" in Iraq? After 100+ Yanks gave their all to
> depose the swine after "The UN" postulated even more aimless endless

Why not find out whether they truly want to be useful? Why prejudge what
their behavior will be? After all, if the UN process looks like it's going
to become fruitless, we can always go ahead and do what needs to be done

ourselves. If we blow off the UN we're letting them off the hook. They can say they were never given a chance to help. Instead, hold their feet to the fire.

>> That said, the bulk of the

Who said they could TELL us to do anything? I'm saying let's see if we can get agreement on what will be done.

You know, my neighbor doesn't have the right to tell me what to do, nor I him, but if I'm doing something that disturbs him or he's doing something that disturbs me, I certainly want to talk to him about it. The bottom line is that if you don't like the way other UN member states are behaving, you're still better off talking to them than ignoring them. Talk costs nothing.

Besides, Tony Blair wants to try to have the UN involved, and don't you think we owe him at least a shot at it? He's certainly been a stand-up guy. Why would you want to throw him under the wheels of the bus, politically speaking?

Considering how many young people died in Vietnam, that was a pretty
rational fear.

> They felt they were "too good for
> lower-class military service."

All of them? How many did you interview?

> They were moral superiors. As
> a more noble group they felt entitled to enjoy the guarantees

> "lower class, less morally superior" citizens in a very large
> world war and a smaller one in northeast Asia and the beginnings
> of the MAD standoff between the USSR and USA, held in place
> by the resolve and work of non-pacifists.

Did you know that some young people left the country rather than be
forced to fight in Vietnam? Sweden was a popular destination.

From what I saw in the Vietnam era, most of the anti-war protest was
an expression of conscience that the war was not morally justified and
was not necessary for the defense of the USA. I remember a group
called "Vietnam Veterans Against The War", composed of servicemen who
had done tours of duty in Vietnam.

Vietnam was a French colony that was under Japanese control during
WW2. After WW2, some Vietnamese wanted their country to be
independent, and asked the USA for help in breaking away from France.
But the USA and other Western nations would not help out, so the
Vietnamese turned to the USSR for help - and got it. Just like some
colonies who wanted independence from Britain 227 years ago, and
turned to France for help.....

I remember a

> >Indeed, many have faced public
> >ridicule and harassment just for speaking out against violence (just look at
> >your own messages for an example of that - you don't see them in this

>
> You have forgotten the returnees from Vietnam being spat upon
> and ridiculed by the morally-superior peaceniks in the 60s and
> 70s.

A few did that. Not many. They were wrong. The people to blame for
Vietnam were the politicians who gave the orders, not those who
carried them out.

Anti-war protestors were beaten, jailed, some even killed.

> You have forgotten the rash of anti-war motion pictures of
> that time and the media portraying the military and government
> as instruments of evil.

Were those anti-war movies inaccurate?

> The peaceniks and media felt safe doing
> all that...the guarantees of the US Constitution permitted them
> free speech.

Guess they shouldn't have actually USED it, huh, Len?

> They felt morally superior. They felt safe to
> express themselves. Guarantees of safety were the responsibility
> of the lower-class, less superior people. It wasn't the nobles'
> task. They were owed it, they felt. Noble people feel like that.

Where DO you get such mixed-up ideas? Were there no "upper class"
people fighting in Vietnam?

I recall a man who was heavyweight champion of the world. They wanted
to draft him, but he said no, he didn't think the war was justified
and he would not go. Spent five years in jail, lost his title, the
prime of his carrer and a whole lot of money.

The reality was that the Army almost certainly would not have put him
in a combat situation, and he would have done his service in some rear
area. But his conscience would not allow him to accept such a deal.
Principle of the thing.

I also remember how Richard Nixon campaigned for President in 1968,
saying he had a secret plan to end the war in Vietnam. Took over five
years but he made good on his promise.
>
> There hasn't been any conscription in the USA since 1973.

That's when you say the Vietnam war ENDED, right?

It wasn't pacifists who sold weapons and weapons technology to Iraq,
either.

> Pacifists didn't deter the hijacked
> airliners crashing into the WTC and Pentagon. Activists in
> the fourth plane took over before it could strike any target.
> Pacifists didn't remove the Taliban from Afghanistan...activists

Pacifists didn't train or fund the people who became terrorists,
either. Nor did pacifists put the Taliban into power.
>

> moment...and also almost a videobite of martyrdom.

Speaking of martyrs - we're coming up on the 91st anniversary of the sinking of the Titanic. Not one of the engineering officers of the Titanic survived, because they were all below decks to the very end. They were keeping steam up and the dynamos turning so that there would be lights and power for the radio.

At least some of them could have escaped if they had left their posts. But they did not, even after the abandon ship order was given. Were they martyrs?

> >Which were more brave,

> US military. That's my answer. It isn't an answer for your loaded
> question.

Not a loaded question at all. No rational persondisoputes the bravery of the troops fighting to free Iraq. The question is why does the USA support such regimes in the first place?

> Most of those who thought Saddam Hussein was wrong were
> either silent or dead. There was no guarantee of free speech in
> Iraq. There was no glorifying videobites of pacifists on Iraqi TV
> protesting the invasion of Kuwait a dozen or so years ago.

Pacifists didn't sell weapons or weapons technology to Iraq. Nor the techniques of how to make chemical weapons.

> Pacifists didn't
> stop the 8-year Iraq-Iran war...the UN took some action because
> world oil supplies were being affected. Iraq and Iran got hand-
> slaps.

Not because of pacifists. Because of the perceived need for cheap oil.

> Iran had a revolution and revolutionaries took over the
> US Embassy in Iran, imprisoned the staff. USA didn't take
> enough action.

USA installed the repressive regime that was overthrown by those revolutionaries, who then installed a different repressive regime. Neither was the work of pacifists.

What action should the USA have taken to free the hostages?

> About two years after the end of the Iraq-Iran
> War, Iraq invaded Kuwait. A coalition led by the USA kicked
> out Iraq. Pacifists didn't do it but their nobility rose to the top
> and demanded "go no further!"

INCORRECT. The first Gulf war was stopped because the goals had been achieved.

Here are some direct quotes from the "pacifists" who decided to stop that war short of kicking out SH's regime.

(thanks, Jon):

"The ending wasn't quite as clean as it might have been if Saddam Hussein had come to that tent [at Safwan on March 3, 1991], laid down his thing and maybe left office ... I miscalculated. I thought he'd be gone ... We might have handled the flying of helicopters differently. So I think there's room for some ex post facto criticism here ... [But] I think history will say we did the right thing."

--Former President George Bush, PBS interview with David Frost, aired January 1996 (taped Dec. 12, 1995).

"We had a crucial but limited objective in the Gulf War: to reverse Iraqi aggression, and to cripple Saddam's offensive military capabilities ... Occupying Iraq with thousands of American troops for the indefinite future and creating a gaping power vacuum in the Persian Gulf for Iran to fill [is what would have happened] if we had pressed on to Baghdad in 1991."

--Brent Scowcroft, national security adviser, 1991. "Why We Stopped the Gulf War," Newsweek, Sept. 23, 1996, p. 3.

"I was just damned glad to have the victory in our hands with the minimum loss of casualties, and I was willing to settle for that because that's a hell of a lot more than anybody's had in a war as long as I can remember."

--Gen. H. Norman Schwarzkopf, commander, U.S. Central Command, "The Gulf War," Frontline, Jan. 9-10, 1996.

"So of all the criticism of Bush Administration decision-making during Operations Desert Shield and Desert Storm, it is this marching-to-Baghdad canard that has the least merit. As a diplomatic, political or even military matter, marching to Baghdad would have been a disaster in the making. Iraq might have fragmented in unpredictable ways, which would have played into the hands of

the mullahs in Iran. The mullahs could have
exported their brand of Islamic
fundamentalism with the help of Iraq's
hiites and quickly transformed themselves
into the dominant regional power."

(Past tense added.)

--James A. Baker, III, secretary of state,
1989-92. "Why U.S. Did Not March on to
Baghdad," Washington Times, Sept. 11, 1996.

Yup, those "pacifists" Bush/Scowcroft/Schwarzkopf/Baker....

--

If an American believes that a particular war is wrong, do they not
have a responsibility to protest against that war? Or should they
simply accept whatever the President says?

Don't be fooled by how slowly my messages appear in the newsgroup, Phil. I posted the message above before you responded to Jim. Therefore that comment didn't apply to your answer to Jim, but to questions in general.

However, since you seem open to questions, perhaps you can answer a few of mine. Continuing with question about citizenship, could I, a non-Jew, immigrate to Israel and participate fully in the system there - vote, seek political office, work for the government, serve in the military, attend any state financed school, and so on? If not, why not?

>> I've heard some jobs are now limited to just
>> Jews - police, military, and so on. But I
>> don't know that to be a fact - it could be just
>> anti-Israeli propaganda.
>
> It is a fact.

Well, I've heard others say that, but didn't know for sure. Anyway, I guess that answers part of my question above. So, why is that the case, Phil? The concept of equal rights for all and separation of church/state are fundamental to the American way of thinking. As such, the exclusion of others, based on religion or anything else, just doesn't feel right to me.

I believe you once said you hold dual citizenship. If so, how do you reconcile the two political systems? They seem totally at odds with each other. Do you believe in the equal rights for all and separation of church/state like we have here or do you believe in the exclusion of others from full participation within a religious state? I truly hope this country is never controlled by any religion, though some religions are almost certainly seeking exactly that.

> (snip) In the Oslo Accords (1992), Israel agreed to

So, what is it going to take to end the dispute? I'm just as uncomfortable with the images of Israeli tanks shooting up Arab neighborhoods as I am with the Arab car bombings and so forth. Is there some sane way to end this madness or do we just accept an endless cycle of violence?

If you want to limit it to just a service and take the hobby
aspect away, then there should be nothing on the air that does not
have anything to do with public service. Therefore the bands would
be unused 99% of the time and the amateur "service" would only
need a fraction of the frequencies it now has.
It is the chat about uncle arthur and other non-public service
things that keep the bands in use so that all the frequency space
allocated to amateur radio is there when public service is needed.
I see nothing in the regulations that state that everyone who
obtains an amateur radio operator's license is required to
participate in public service.

Syria is next. That will save you from 'thinking' about it. And guess what? I doubt the military gives two hoots about your opinion on the subject of US self defense. And thank goodness for that.

Correct in all aspects Bill. Syria is next. Or let me ammend that. It
should be, since were already there and geared up to go.

Didn't George Patton want to do that with 'our friends the Russians' ?? Boy
did we miss a chance there.

I read it, and I agree with him. Most 'hams' today are not only freeloaders on the work and sweat of those before, they have no concept at all that this is not a hobby. Its a service.

We exist because of our demonstrated capabilities in providing emergency communications. For little to NO COST to the public.

Thats why were here. Not to chat on 20 about uncle arthur paying you a visit last night.

That's your opinion. Others would say that those who protested the
Vietnam war were patriotic.

>> young people who faced conscription into military service. They
>> feared "dying in Vietnam."
>
>Considering how many young people died in Vietnam, that was a pretty
>rational fear.

Most of those protesters survived to this day and some are the "leaders" of present-day USA.

Research the casualty figures of WW2. The USA "had no business going to Asia or Europe to fight a war" was a common thought November 1941 and earlier. Prove it was a correct philosophy.

>> They felt they were "too good for
>> lower-class military service."
>
>All of them? How many did you interview?

Several hundred, mostly as a civilian. I'd already completed my 8-year US military service, had received an Honorable Discharge.

How was your military service for the United States?

>> They were moral superiors. As
>> a more noble group they felt entitled to enjoy the guarantees
>> of a better life. Those guarantees had been kept in place by
>> "lower class, less morally superior" citizens in a very large
>> world war and a smaller one in northeast Asia and the beginnings

>> by the resolve and work of non-pacifists.
>
>Did you know that some young people left the country rather than be
>forced to fight in Vietnam? Sweden was a popular destination.

Canada was much more popular than Sweden. Most Canadians can speak English. I can speak Swedish and have visited there three times. Sweden is a European neutral, was so throughout the last century. Sweden still has compulsory military service, has had such throughout the last century. In the USA the draft ended in 1973, 30 years ago.

>From what I saw in the Vietnam era, most of the anti-war protest was
>an expression of conscience that the war was not morally justified and
>was not necessary for the defense of the USA. I remember a group
>called "Vietnam Veterans Against The War", composed of servicemen who
>had done tours of duty in Vietnam.

Most of them had ONE tour. How many tours have you done?

Let's cry great big crocodile tears and wail forever about Vietnam
and awful WAR!

Let's bring out minor examples and highlight them to "prove" that
war is terrible, ghastly, brutal, and SHOULD NEVER BE.

Fight for peace.

>Vietnam was a French colony that was under Japanese control during
>WW2. After WW2, some Vietnamese wanted their country to be
>independent, and asked the USA for help in breaking away from France.
>But the USA and other Western nations would not help out, so the
>Vietnamese turned to the USSR for help - and got it. Just like some
>colonies who wanted independence from Britain 227 years ago, and
>turned to France for help.....

Of course..."similarities!"

France struggled through EIGHT YEARS of fighting the Vietminh
during the French Indo-China War...1944 through 1952, just 59
to 51 years ago...NOT 227 years ago. That French colonial
country, taken (by force of arms, really) long ago, had been
fractioned and conquered by others before. Research the
distance from France to Vietnam and compare from the UK to
North America. Did the French speak any form of Vietnamese
when they took over than colony? Were they of the same
racial background? Did they share a common history?

Segue to 1775 and the "English Colony" of the Americas.
English for the most part through ancestry, language, and a
shared history of roots IN Europe. The Revolution of 1776
was more of a civil war with a direct resentment of rule by
royalty. The colonialists resented rule by royalty and wanted
independence. You may have read about it.

Hop back to 2003. Guess who were PARTNERS in the Iraqi
Liberation...USA and United Kingdom!

Where was France? Have the French ever had any victory
of their own in two centuries? They couldn't hold Vietnam,
even with lots of aid from the USA. They folded. It was a
"dien-ben-phooey" for them.

>> You have forgotten the returnees from Vietnam being spat upon
>> and ridiculed by the morally-superior peaceniks in the 60s and
>> 70s.
>

>A few did that. Not many. They were wrong.

They were all over the press and TV at the time. I was a working adult back then, had received my Honorable Discharge from US Army service. Peace and flower-power and free love for everybody. Wonderful, widespread exposure in the media.

They felt "better red than dead." Communism was a wonderful thing they thought, everyone retreat to a commune and commune with nature. No worries, no problems. They could do so in safety, protected by non-peaceniks.

Meanwhile, away from the applause for "Dr. Strangelove," a quiet majority kept to MAD, loitered the B-52s just short of the USSR, practiced on "oil burner routes" just in case, installed the BMEWS and those advanced electronics in Alaska. They kept on volunteering for military service even though the draft was on until 1973, kept watch in NATO in places like Berlin. Boomers and sharks were active in the oceans, aided by things like SOSUS and advanced sonar, resolve and responsibility of their crews. Oh yes, some of us evil, code-hating professionals even helped on making precision munitions that minimized collateral damage while improving targeting accuracy.

>The people to blame for
>Vietnam were the politicians who gave the orders, not those who
>carried them out.

Well, then, speaking as a moral superior, your experience in such order-giving should be a model for all politicians.

>Anti-war protestors were beaten, jailed, some even killed.

Better get some media involved on such "gangster" tactics and bring the "ciminals" to trial!

>> You have forgotten the rash of anti-war motion pictures of
>> that time and the media portraying the military and government
>> as instruments of evil.
>
>Were those anti-war movies inaccurate?

Yes. Hunt the radio surplus stores for a "Gold Code Receiver."

You won't find any. It existed only in movie.

Did the USA suffer any nuclear bombardment during the Cold War? Was MAD successful in preventing wholesale slaughter of the "western" world? Did the USSR survive past 1991?

>> The peaceniks and media felt safe doing
>> all that...the guarantees of the US Constitution permitted them

>> free speech.
>
>Guess they shouldn't have actually USED it, huh, Len?

Not only did they USE all of it, the media made them a glorious
example of a "superior moral" group.

You evidently weren't aware of what was happening then, young
as you were.

>> They felt morally superior. They felt safe to
>> express themselves. Guarantees of safety were the responsibility
>> of the lower-class, less superior people. It wasn't the nobles'
>> task. They were owed it, they felt. Noble people feel like that.
>
>Where DO you get such mixed-up ideas? Were there no "upper class"
>people fighting in Vietnam?

The "moral superiority class," the peaceniks thought they WERE
the "upper class." They felt they could accomplish things by
NOT doing things.

Did you fight in Vietnam?

>I recall a man who was heavyweight champion of the world. They wanted
>to draft him, but he said no, he didn't think the war was justified
>and he would not go. Spent five years in jail, lost his title, the
>prime of his carrer and a whole lot of money.

TS. Cassius Marcellus Clay changed his name to Mohammed
Ali after turning professional in boxing. I fail to see any
redeeming qualities for human society in professional boxing
other than as entertainment.

>The reality was that the Army almost certainly would not have put him
>in a combat situation, and he would have done his service in some rear
>area. But his conscience would not allow him to accept such a deal.
>Principle of the thing.

FEAR not "principle." Let's not kid anyone, mighty moral superior.

Elvis Presley served in the US Army. BFD.

How have Ali and Presley fared since then?

>> There hasn't been any conscription in the USA since 1973.
>
>That's when you say the Vietnam war ENDED, right?

The end of US military conscription happened on 27 Jan 73.

>> For
>> a few months longer than 30 years the USA military has been
>> all-volunteer. In those three decades a few things happened
>> that threatened our guarantees and the fates of several nations

>> besides our own.
>
>Like what?

Almanacs are full of such information. I can't be your history
teacher all the time. DO YOUR OWN WORK.

You may begin with MAD, try the Sinai (twice), Lebanon, both
places for peacekeeping forces. There's the Philippines, at least
two countries in the middle of Africa, an island in the
Carribbean called Cuba that once had IRBMs from the USSR
pointed at us (but while the draft was going on), Haiti, Grenada,
Panama (USA built their canal). There's the DMZ in Korea, the
Korean War still technically going on (its a sort of perpetual
truce). "Checkpoint Charlie" is gone in Berlin now that the
USSR dissolved and the Germanys reunited.

>> Pacifists didn't help keep our guarantees or
>> take action.
>
>There are actions other than military ones, Len.

Of course...lie down and "stop" a tank sometime.

>> The USSR dissolved, not from any actions of pacifists, but
>> from the inherent socio-economic faults of communism.
>
>It also did not dissolve because of any war.

Ah...so a place called Afghanistan "meant nothing" to the
soviet republics? Better check the years the USSR was in
there and the body counts they accumulated. Better check
out a few places in middle Europe (Hungary is an example
that comes to mind) where force of arms aided and abetted
communist ideology as a ruling party.

>> The
>> Germanys united and "the wall" fell from action, not a result
>> of pacifism.
>
>Not because of any war, either.

The Germanys were DIVIDED by post-WW2 "peace negotiations"
so that eastern Germany could be taken over by communists.
That was in all the papers and recorded fact.

>> No pacifists stopped the nation of Iraq from
>> invading their tiny neighbor.
>
>Which one - Iran or Kuwait?

Iran is almost the size of Iraq. Kuwait is much smaller in area.
Try a recent history book of the last decade for help.

>It wasn't pacifists who sold weapons and weapons technology to Iraq,
>either.

USSR/Russia, France, Germany were the biggest sellers.

Did any of them help the Iraqi people? Were any of them involved
in the second Gulf War?

No to all the above.

>Pacifists didn't train or fund the people who became terrorists,
>either. Nor did pacifists put the Taliban into power.

Ah, you are finally seeing the light of dawn! Amazing!

Tell us how pacifists, peaceniks, and flower-power love children
stopped those groups. At any time.

>Speaking of martyrs - we're coming up on the 91st anniversary of the
>sinking of the Titanic. Not one of the engineering officers of the
>Titanic survived, because they were all below decks to the very end.
>They were keeping steam up and the dynamos turning so that there would
>be lights and power for the radio.

How many passengers did they "save?"

>Not a loaded question at all. No rational persondisoputes the bravery
>of the troops fighting to free Iraq. The question is why does the USA
>support such regimes in the first place?

Another Gang of Four member exhibits typos in the "heat" of
message battle... :-)

How in the world did you get the idea that the USA "supported"
Iraq since 1980?!?!? Iraq is oil-rich and has sold petroleum on
the world market...is that "support?!?"

"Support" isn't defined as largely keeping a hands-off policy due
to a touchy Middle Eastern sociopolitical situation in the 1980s.

"Support" ENDED - in no uncertain terms - when Iraq invaded
Kuwait in 1990.

>> Most of those who thought Saddam Hussein was wrong were
>> either silent or dead. There was no guarantee of free speech in
>> Iraq. There was no glorifying videobites of pacifists on Iraqi TV
>> protesting the invasion of Kuwait a dozen or so years ago.
>> Perhaps some Kurds in northern Iraq were pacifists...we don't
>> know...several hundred were gassed to death.
>
>Pacifists didn't sell weapons or weapons technology to Iraq. Nor the
>techniques of how to make chemical weapons.

Pacifists didn't STOP all that military hardware from Russia, France,
or chemical, civil engineering services from Germany.

>What action should the USA have taken to free the hostages?

Teach the Iranians morse code and love for the most effective
mode in ancient amateur radio, of course.

>> About two years after the end of the Iraq-Iran
>> War, Iraq invaded Kuwait. A coalition led by the USA kicked
>> out Iraq. Pacifists didn't do it but their nobility rose to the top
>> and demanded "go no further!"
>
>INCORRECT. The first Gulf war was stopped because the goals had been
>achieved.

Kiss my yes, Jimmie. Peaceniks were all over DC and glorified in
the media before and after the first Gulf War. Plus the Middle
Easterners themselves didn't want to cause any more trouble with
Iraq...Iraqis are mostly Arab in case you haven't noted..

>Here are some direct quotes from the "pacifists" who decided to stop
>that war short of kicking out SH's regime.

Jimmie boy, I've already heard and seen those quoted individuals.

You sum up the Gulf War(s) in the ultra-simplistic "it's all about
oil!" and won't be corrected on it. It's far more complex than
that...but it's nice for you in trying to win message points. :-)

Have your years of experience in government affairs made you
an "expert" in What To Do and What Is Correct? I don't think so.

Have your years of military service made you an expert on
warfare? I don't think so.

How have you been doing on 97.3.(e) to improve world opinion...
Peacefully?

Research "grapeshot" and "throatshot" such as at the Battle
of Culludden...deliberate point-blank range firing of cannons
loaded with scrap metal into advancing ranks. Research the
deliberate bayonetting of wounded found on a battlefield as a
"humanitarian" gesture.. Research some places such as the
Andersonville POW camp during the American Civil War.
Research the deliberate firebombing of cities such as the
northeastern section of Tokyo in 1945. Research 1988 and
a certain air force, now non-existant, dropping poison gas on
its countrymen to quell a political uprising.

Warfare is NOT a game. It is brutal. It isn't a spectator sport
enjoyed sitting in front of a television on Saturday afternoons.

Sometimes war is necessary.

>> Fortunately the people who make the
>> decisions are pacifist enough not to have used them since 1945.
>
>Pacifist enough, or not desperate enough?

Not suicidal. Research the acronym "MAD" and find out if it
worked.

Try 1988 and the southeastern part of Iraq for "pacifism" in
action. Bye-bye a few hundred Kurds.

>> Coalition air forces could have turned Bagdad into another 1945 Dresden
>> or Tokyo, but they chose not to, and used precision rather than brute
>> force. Not perfect but better.
>
>Vastly better for the residents of Baghdad.

...and Kirkuk, Mosul, Najaf, and Tikrit for similar cities.

Those who don't like "collateral damage" are welcome to research
Coventry or parts of London as well as Hamburg and Berlin.

>> It's clear that support of SH and the Afghan mujahadeen in the 1980s
>> were mistakes. The challenge is to not make those mistakes again.
>
>SH, yes. In the case of the mujahadeen, it's not so clear. They, at least,
>were acting in legitimate self defense. The error in Afghanistan came
>after the Soviets left when we abandoned the progressive elements of
>Afghan society, allowing the warloads and eventually the Taliban to take
>control and set the country back hundreds of years. Had we engaged in that
>nasty ol' nation building then, 9/11 probably would never have happened.
>9/11 happened not because of a lack of warmaking but because of a lack of
>peacemaking.

Research "League of Nations" and the aftermath of 1918 and what
happened to a certain Weimar Republic. Research what happened
to a certain Russian Revolution of 1917 and its aftermath. Research
what happened in Indonesia and their Civil Wars which killed about
as many as were victims in those German and Polish camps having
their entrance gates marked "Arbeit Macht Frei."

Nasty old USA is "to blame" for all of those, isn't it?

Clearly, 97.1.(e) hasn't been used effectively. The "international
language" of morse code hasn't been effective in all that for a
half century. So much for the "public service" of morse code
and peaceful coexistance. :-)

>What IS hopeful is that the Administration is saying it's committed to
>rebuilding Iraq. I hope that's true, because if we don't it will turn into
>Afghanistan squared. But when it comes to this Administration, I'm from
>Missouri.

Best not to be. The "representative" from Missouri appears in here
from time to time. Everyone has seen his "feelings." Null-making.

The "20s and 30s" was 80 to 70 years ago.

Back then there WAS a case to be made for morse code.

Tell us all about the "sorts of technology 'sold'" to Japan
80 to 70 years ago.

Tell us where Hallicrafters, National Radio, and RME have
gone.

Bad form, OM. You dwell on the past too much without
thinking of the present-day and the future.

>>Is there any hope?
>
>Definitely yes!

There IS a chance that all of S25 will be rewritten at WRC-03.

>>I simply don't see it.
>
>Consider how acceptable violence and repression used to be, even in
>civilized Western republics like the USA.

You were there. Tell us about it.

>Husbands beat their wives, parents beat their children, employers beat
>their workers and the workers rioted in return.

Tell us about being a victim. First-person stories have nice
visceral quality about them.

>Slavery - the actual treatment of human beings as property - was
>legal and protected (by force) in much of this country until only 160
>years ago. A country that promised "all men are created equal" and
>"freedom and justice for all".

160 years is roughly 8 generations. Morse code and the telegraph
were new then, "high-tech" for its time.

159 years and approximately 8 generations later, some amateurs
are adamant about knowing morse code for a radio license.

Radio as a communications medium is only 107 years old.

>Except for a few land purchases here in the East and some remaining
>"reservations", most of the USA's land area was obtained from its
>original inhabitants by force of arms.

Eastern thinking may consider the Louisiana Purchase a garage
sale or Alaska picked up at some auction.

The center of population of the USA has long since been WEST
of the Mississippi River.

>But today almost all of that sort of behavior is considered
>unacceptable, and forbidden by law. Long slow progress, but progress
>nonetheless.

159 years after the first commercial use of telegraphy and 107
years after the start of radio as a communications medium,
some amateurs insist, some adamantly, that morse code testing
is required for an amateur radio license.

No real progress in the Archaic Radiotelegraphy Society.

Perhaps in using transistors and discarded tuna cans, yes.

>Or consider this: Women got the right to vote in the USA in 1920 -
>almost 150 years after the nation's founding on the principle of "all
>MEN are created equal". Did they have to use violence to get it?

Consider this: In US amateur radio, the predominant demographic
group of licensees is composed of WHITE MALES.

>Weapons of mass destruction are a relatively new thing, compared to
>the long sorry history of warfare. Fortunately the people who make the
>decisions are pacifist enough not to have used them since 1945.

The year 1988 will mark that as untrue.

>Coalition air forces could have turned Bagdad into another 1945
>Dresden or Tokyo, but they chose not to, and used precision rather
>than brute force. Not perfect but better.

The "brute force" technique is apparantly what this renowned
historian (and military NON-veteran) considers the charging
across an open field in formation by rank and file during the
American Civil War...which ended in most world armies about
the turn of the last century.

The year now is 2003 and it is NOT 1944 and pipe-dreaming
about the 8th Air Force flying B-17s by day (10 crew per plane)
and RAF flying Lancasters by night over the same target. It
is NOT 1945 and B-29s dropping thousands of incendiaries on
Tokyo, setting fires so great that the last flight (of 4) could not
hold position due to updrafts and diverted to a secondary.

Neither is this 159 years ago and the commercial birth of
wired telegraphy. Neither is it 107 years ago and the birth of
radio as a communications medium. Spark as an RF
generation source is outlawed.

>The mission of pacifism in the 21st century is to oppose the policies
>that lead to wars, and go after them long before the shooting starts.

"Hell no, you won't go!" You didn't. Feel proud.

>It's clear that support of SH and the Afghan mujahadeen in the 1980s
>were mistakes. The challenge is to not make those mistakes again.

It's clear that the support of ARRL and the olde-tyme morsemen
of the 1930s to 1950s for morsemanship as king was a mistake.
The challenge is not to keep repeating it for an avocation.

Recall 97.1.(e) and compare that to ALL the warfare that has
engulfed the world since the end of WW2. Where has all that
"goodwill" gone, what did it do?

None of which are WMD as the term is now defined. WMD are generally
defined as chemical, biological and nuclear weapons. It's certainly true
that many things that have been done in warfare are brutal. And to the
victim, dead is dead whether killed by WMD or by a pointed stick. But the
term WMD doesn't refer to all those other weapons.

> Warfare is NOT a game. It is brutal. It isn't a spectator sport
> enjoyed sitting in front of a television on Saturday afternoons.

Gosh, really, Professor Len? Just who, in your fevered imagination, do you
think believes that war isn't brutal?

> Sometimes war is necessary.

Yes, particularly in defense against aggression. Of course, which side is
the aggressor and which the defender tends to be determined by the victor.

>>> Fortunately the people who make the
>>> decisions are pacifist enough not to have used them since 1945.

>
>I try to be as clear as possible.

You're usually vry unclear. PArt of the problem is that you attach your own definitions to words, rather than use the definitions everyone else uses. For example, you talk about "ham radio" as if it is not the same thing as "amateur radio". To everyone else, the two terms mean the same thing.
>

You asked about "some people". Depending on who it is, I base my
decision as to the value I place on their opinion. Most of the anti-war
types
I've seen interviewed are patently uninformed...hence I value little
as to their opinion.

"Mutually-Assured Destruction" involves two powers EACH
possessing annhilation weapons. That policy did not involve
Iraq.

Would you rather have waited a long time to FIND OUT, Jon?

Would it please you if, in the future, Iraq got to the point of USING
chemical, biological, or nuclear weapons capable of killing
MILLIONS? I'm sure you would. You are safe up in the outskirts
of Boston...nobody would DARE go in there and do anything...

No, Jon. [try to avoid the antagonistic "moral superior" phrasing]

I was forming an opinion on the Middle East at the time, getting
to travel to Fort Irwin on business involving military electronics.
That's a large desert warfare training center. You may heard
mention of it in Tom Clancy novels.

Jon, I'd already served my country in the military 1952 to 1960.

I don't really need some League person telling me where my
patriotism "should be." In ANYTHING.

>> Bye-bye a few hundred Kurds.
>
>A few thousand, actually. But who's counting?

>> Nasty old USA is "to blame" for all of those, isn't it?
>
>Eh? Of course not. Your point being what?

I don't know what in hell YOUR point is...but I admit some curiosity.

Are you here after an absence to stir up "action?"

Are you and your League cronies all "moral superiors" in anything
you mention.

Sure sounds like it...

>Still obsessing over Morse, Len? Some day you really must get a life!

I have a nice life, Jon. I've never used any morse, nor had to use
any morse in all the 50 years since I first fired up a transmitter on
HF while serving the US Army in Japan...nor any time thereafter
on legally transmitting everywhere in the EM spectrum from VLF
to about 22 GHz.

You seem to imply that having an amateur radio license makes you
some kind of "moral superior" on things NOT about amateur radio.
That implication is common to the PCTA. Strange behavior about
a hobby which is partly defined by 97.1.(e) in Title 47 CFR.

Have a nice day. I had one and expect to have one tomorrow.
Morse code isn't part of that.

Please explain how demonstrated skill in morsemanship makes
one an "expert" or "moral superior" on geopolitics.

>
>Is that a bad thing?

For licensing in US amateur radio it is considered "bad" by many.
So much so, they've not bothered to get into US amateur radio.

>>Thats what I mean. Chosing to look at the numbers that way is advocating
>>Morse code.
>
>Is that a bad thing?

That is biased, incorrect, a mistake, an error. It is spin,
propaganda, self-interest, and a lot of not too good
attributes.

>>N2EY claimed more Morse code sales indicates Morse code is growing,
>
>Morse code USE. Is that not a logical conclusion?

There is a dearth of business information in regards to the
"growth" of morse code use.

>>which means more poeple are interested in it,
>
>Is that not a logical conclusion? I don't think many people are buying new
>keys, paddles, keyers, software, filters, rigs and other Morse-code-related
>equipment and then not using it.

If your only "hammer" pounds out morse code, then everything
must indicate morsemanship to you.

>>which means Morse code is more useful
>>(according to N2EY's logic).
>
>If something is used more, is it not more useful?
>
>Why does it bother you if someone proves that Morse code is useful?

Morse code is NOT "useful." Of all the US radio services that
existed since the end of WW2, only two retain morse code
modes for any sort of communications purpose. One of them
is maritime radio services but the maritime world has gone over
to voice and data and GMDSS has supplanted the old 500 KHz
morse-required international distress and safety frequency.

Morse code mode is slow and error-prone in requiring humans
at each end to be the encoder and decoder. Maximum
throughput is, at best, 30 WPM only be very skilled and
experienced morsemen. The slowest teleprinters in radio
communications have been 100 WPM for four decades, can
do so 24/7 with enough paper to reload, don't need food,
don't need breaks, don't need to go to the bathroom. Data
rates can go to 200+ WPM equivalent and use forward-
error correction codings to improve reliability through
interference.

Every OTHER US radio service gets along quite fine without
using morse or ever envisioning its use. US amateur radio
licenses MUST have demonstrated morse code cognition
to have below-30-MHz privileges. The only logic in that is to

preserve a living museum of the airwaves and constant
re-creation of the past. That's hardly in all 5 parts of 97.1.

I'll just consider you as a museum artifact.

Enjoy your glass case.

Your point? And more to the latest...many obvioulsy had no
desire to defend the Saddam regime.

> Nor does either change the fact that many are not out
> cheering our invading Army right now - they're home crying over the loss
of
> a son, daughter, husband, wife, mother or father. War is ugly.

I never said it wasn't. The fact still remains that the coalition
executed the most precise offensives ever accomplished with
minimal civilian losses. Additionally, you seem to forget the
Americans that mourned the loss of a son, daugher, husband,
wife, mother or father on 911...or those that lost a son, daughter...
as part of the coalition losses.

> The government, military, and press, are working hard to
> make sure Americans never see that ugliness.

WHAT? This war has been covered by the press to the degree
that no other war ever was...front line stuff and all. Do you even
watch the news? It was within minutes of the first loss of coalition
forces that it was reported on TV. Every single coalition member
loss has almost instantly been reported.

> If we're going to scream for war, then we should
> also have the balls to honestly look at the results.

I absolutely do. More than you know...and that's something
I have done for many years. Where will you be on Memorial
Day this year?

> > The fact that any American doesn't understand why

The Amherst story is somewhat in doubt. There's no clear evidence it was
actually done. The risks to Amherst's people make it doubtful.

Still, the idea was proposed. The letter that is quoted makes it clear that
Lord Jeff wanted to wipe out the Indians, and thought smallpox might do the
job.
>

Not enough pacifists. "Blessed are the peacemakers"....

Nation-building or not, it is my understanding that what really ticked off OBL & Co. was the presence of "infidel Crusader/Zionist" troops in the holy land of Arabia. Didja know he and some of his mujahadeen buddies showed up in SA in 1990 and wanted to free Kuwait themselves? Said it was an Arab problem, and Arabs should solve it without help from unbelievers. He was politely turned away. They shoulda let him have a crack at the Iraqis....

I found something that he had co-written and sent as an open letter over at
http://www.traverse.com/people/ka8hib/carc/feb01.htm and it reads about
like you say, although significantly tamer. I can't speak whether the World
Radio article is any different.

He's got a good point - although a bit overstated. We do have other
important public benefits in addition to emergency services. Suggesting
that only those people involved with ARES/RACES/SKYWARN are the ones
"paying the toll" is just hyperbole. However, increasing the number of
amateurs involved in these organizations is a darn good idea and it's an
idea that deserves promoting. It is a very important part of the service
and it's also one of the parts that is the most visible to the public at
large. Deeping our involvement in emergency communications is a very good
way to ensure the viability of amateur radio.

Let me give you my view of the speech of desent.

There are several levels of disent...

1. Those that seriously and logically question why?
2. Those that simply say NO and do so in an overt fashion
such as public demonstrations.
3. Those that say NO and do so in an aggressively overt fashion
which can and often is used by our enemies to bolster the
position of our enemy (Jane Fonda going to Hanoi...perfect example)
4. Those that demonstrate and in so doing, violate the law which
infringes other people's rights.

I support 1 and don't consider it unpatriotic.
I support 2, but believe the participants should understand
they may be giving aid/comfort to the enemy and that they
should understand and accept responsibility for their
public comments.
I believe 3 and 4 are clearly unpatriotic.

Your mileage may vary,
but that's my opinion.

Cheers,
Bill K2UNK

There ya go painting that broad paintbrush again, Dick. You forget that we the peons are at the mercies of what our governments do. The people of France and Germany have no more control over what their government does than we do of ours--just like the Iraqi people not having much control over what their government did/does. Criticize where criticism is due. I do not fault the French or German, or any other, people in general. Nor should anyone.

With all due respect, Dwight...Iraq is no third world country. Iraq is in the state it is because of a bastard for a dictator. As N2EY had pointed out, Iraq had the capacity to become a resort country. I do agree their military is third world-ish. Goodness, imagine what our military leaders would think if our soldiers started doing what Iraq's did?! The irony is yet that our military leaders encouraged those soldiers to "put down their weapons."

Isn't that interesting? We teach our children these wonderful principles.
The very principles that, when defended and upheld as we are adults, become
the targets of accusatory slang, etc. Very curious.

BRIAN, PUHLEEZE!!!! The Iraqi people are scared to death. Just two months
ago they would have done the exact same thing to the coming of the Iraqi
armor & troops. While I am proud of our troops, I distrust the glee and
happiness of a people who, to date, have been programmed to react exactly
the way they are to whomever is carrying the guns. Give this time...even if
the celebration is generally the majority of the people, it will end when
they realize they have to work hard now to bring their country into the 21st
Century.

yeah, and you're too wrapped up in your resentment and bitterness to be human about what you think, Dan. Why don't you just keep saying that prayer, "Kill 'em all and let God sort 'em out." Problem with that, what will God have left to sort?

```

So, you've missed them you are saying? Maybe you agreed with a president who keeps stating it's "his" government. That's just one of the many, many statements I've heard him make that really concern me. Then, there's the great Rumsfeld...oh, good grief, what a brat he must've been when he was a little boy.

To all radio amateurs

SB QST ARL ARLB029
ARLB029 IARU admits three new member-societies

The International Amateur Radio Union (IARU) has admitted three new
member societies. The National Association Radioamateurs of Georgia
(NARG), the Federation of Radiosport of the Republic of Armenia
(FRRA) were voted in April 10; the Vietnam Amateur Radio Club (VARC)
officially joined IARU on April 4
----------------------------------------------------------------------

Perhaps Brian Kelly would like to welcome the Hmong to amateur radio.

...at no risk to himself.

Rumsfeld: [France and Germany are] "old Europe."

Perle: Sy Hersh [Pulitzer Prize winning reporter] is the closest thing
American journalism has to a terrorist.

DeLay: Fermez la bouche, Monsieur Daschle. [Okay, DeLay isn't part of the
Administration, but he's tight with them.]

Other examples can easily be found.

>> Why is it that countries

Examples?

Oh, and if it's all about following money, who's going to benefit
monetarily from those rebuilding-Iraq contracts that are being offered
only to selected US companies?

>> In significant part, it's because we've told them in so many words that

No, they've said they disagree with us. That's not the same thing.

I'm convinced that you "don't think," and don't know what proficiency
is.

I'll amend the list to start at 11wpm. Here goes. Try real hard to
decide which is the lowest level of proficiency. Does Morse
proviciency begin at:

11wpm
12wpm
13wpm
14wpm
15wpm
16wpm
17wpm
18wpm
19wpm
20wpm
21wpm
22wpm
23wpm
24wpm
25wpm
26wpm
27wpm
28wpm
29wpm
30wpm
31wpm
32wpm

33wpm
34wpm
35wpm
36wpm
37wpm
38wpm
39wpm
40wpm?

Best of luck, Brian

Really? Then why were there people without a military backgound (as well
as people with one) protesting the war precisely on the grounds that war
is brutal?

There also are a lot of people around the world who have plenty of
experience with the brutality of war but who were not in the military. The
term in vogue these days for such people is "collateral damage."

Note, too, that only a small percentage of those serving in the military
have had direct experience of war. Thankfully, may I add.

> Those who want to put their heads in the sand and deny any of the

>
> "Mutually-Assured Destruction" involves two powers EACH possessing
> annhilation weapons. That policy did not involve Iraq.

Exactly. There have been wars between a power with WMD and a power without (e.g., US/Vietnam, USSR/Afghanistan) yet WMD were not used. Clearly, MAD was not the deterrent in these cases. Something else must have been. What do you think it was?

> Would you rather have waited a long time to FIND OUT, Jon?

Nope.

> Would it please you if, in the future, Iraq got to the point of USING
> chemical, biological, or nuclear weapons capable of killing MILLIONS?
> I'm sure you would.

Len, are you really claiming that I would be pleased if Iraq used WMD? Do you know how utterly asinine that is?

> You are safe up in the outskirts

> No, Jon.

Well then, there is more than one possible reason for the inaction against Iraq in 1988, isn't there? In fact, it wasn't pacifism that caused world inaction, it was apathy.

> [try to avoid the antagonistic "moral superior" phrasing]

Should I have told you to go research it? Or is that "antagonistic 'moral superior'" phrasing reserved to you?

> I was forming an opinion on the Middle East at the time, getting to
> travel to Fort Irwin on business involving military electronics.
> That's a large desert warfare training center. You may heard mention
> of it in Tom Clancy novels.

I don't recall having heard of Fort Irwin. All my military electronics business was conducted in the eastern US (Aberdeen Proving Ground, Fort Benning, Naval Research Lab) and in field locations (Aleutians, Diego Garcia). But I don't think any of that either validates or invalidates my point of view on Iraq.

> Jon, I'd already served my country in the military 1952 to 1960.

How is that relevant? Does military service automatically make all of your opinions correct?

> I don't really need some League person telling me where my patriotism

> And we turned a blind eye to atrocities they committed. Do you think
> captured Soviets were treated as POWs under the Geneva convention?

No, but that doesn't mean the Afghans' willingness to engage in warfare was illegitimate, does it? How they behaved during the war (and the Soviets weren't much better, by the way) is a separate issue.

>>The error in Afghanistan came
>>after the Soviets left when we abandoned the progressive elements of
>>Afghan society, allowing the warloads and eventually the Taliban to take
>>control and set the country back hundreds of years.
>
> This was during whose administration?

Both G. H. W. Bush and Clinton. The Taliban came to power in 1996, in large part because Pakistan (with the acquiescence of the US) wanted stability in Afghanistan rather than the chotic rule of local warloads and the attendant continual civil warfare.

By the way, a significant factor in US thinking was that they were looking for alternate oil and gas pipeline routes out of the Gulf.

> Not enough pacifists. "Blessed are the peacemakers"....

Peacemakers are not necessarily pacifists. Pacifists eschew war altogether. Peacemakers attempt to avoid or end war by creating the conditions for peace. Paradoxically, that sometimes means engaging in war in order to create the conditions for peace.

> Nation-building or not, it is my understanding that what really ticked
> off OBL & Co. was the presence of "infidel Crusader/Zionist" troops in
> the holy land of Arabia.

Yep. The thing is, he didn't return to Afghanistan until after the Taliban took control, in 1996. This was after he was expelled from Sudan. Suppose Afghanistan had been built up, starting in 1989, using the progressive elements that existed there to build a modern state (or what passes for one in that part of the world). It would probably not have been possible for OBL to return to Afghanistan from Sudan. Or if he did, he wouldn't have been able to set up the organization that he did. 9/11 might never have happened.

> Didja know he and some of his mujahadeen buddies showed up in SA in 1990
> and wanted to free Kuwait themselves? Said it was an Arab problem, and
> Arabs should solve it without help from unbelievers. He was politely
> turned away. They shoulda let him have a crack at the Iraqis....

Talk about your no-lose situation!

>>What IS hopeful is that the Administration is saying it's committed to
>>rebuilding Iraq. I hope that's true, because if we don't it will turn
>>into Afghanistan squared. But when it comes to this Administration, I'm
>>from Missouri.
>
> There's a good article on slate.com about that entire issue.

I'll check it out, thanks.

Amateur Radio Newsline™ Report 1339 - April 11, 2003

The following is a closed circuit report. Here is Amateur Radio Newsline's support fund administrator, Andy Jarema, N6TCQ.

--

For the month of February we heard from: Monthly contributors Joseph Bartzi, Jr., KC8DKF of Wadsworth, OH, and Scott Hensley of the Area Communications Team, of San Jose, CA. Total contributions were $25, with NO clubs heard from. On the other hand, our expenses were $661.

That doesn't work! We need your help to keep these newscasts on the air!

I'll make you a deal: you send whatever you can, and I will take the next few weeks to catch up on who's been helping us stay on the air over the past year.

A reminder that Am,ateur Radio Newsline™ is a federal, 501 (c)(3) non-profit corporation. All contributions are tax-deductible.

The address for the Newsline Support fund is PO Box 660937, Arcadia, CA 91066. If you missed it, it will be given again at the end of this week's newscast. I'm Andy Jarema, N6TCQ.

--

Thanks Andy. That ends the closed circuit with Amateur Radio Newsline report number 1339 with a release date of Friday, April 11 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. Australia says its time to restructure that nations Amateur Radio Service and ham radio in Iraq. These stories and more on Amateur Radio Newsline report number 1339 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING: AUSTRALIA SAYS TWO LICENSES WILL DO

The Wireless Institute of Australia says that its time to restructure ham radio down-under and that two licenses will do. David Jones, VK4OF, reports from last weekends W-I-A Annual General Meting in the city of Adelaide:

--
Audio report only. Hear it at http://www.arnewsline.org
--

Jones' report quotes a press release from Wireless Institute of Australia President Ernie Hocking, VK1LK. We will have more in future Amateur Radio Newsline reports. (Q-News)

**

AMERICA AT WAR: BAGDHAD RADIO CLUB STATION CLOSED FOR DURATION OF WAR

Ham radio will hopefully re-emerge in Iraq after the war has ended. In the meantime, the Daily DX and the ARRL Letter relay information from Diya Sayah, YI1DZ. This, on the plight of one of that nations best known Amateur Radio operations.

YI1DZ, is one of the primary operators at the Baghdad Radio Club YI1BGD station in Baghdad. He reported that just prior to the outbreak of hostilities in Iraq that he had dismantled the station. Also, that all of the equipment is stored in as safe a place as possible.

Daily D-X Editor Bernie McClenny, W3UR, says that he doubts there will be any activity in the near future from YI1BGD or any other Iraqui Amateur Radio station. The YI1BGD club station went on the air in the 1970s and the Iraqi Association for Radio Amateurs remains an International Amateur Radio Union member-society. (ARRL, Daily DX)

**

IN THE PUBLIC LIGHT: AMATEUR RADIO AT NAB-2003

I'm Bill Pasternak, WA6ITF, in Las Vegas Nevada, where the National Association of Broadcasters Convention Amateur Radio Reception is just winding down. An estimated 700 hams involved in the broadcast profession spent the last 2 hours enjoying one anmothers company. They also heard a brief talk by ARRL Presodent Jim Haynie, W5JBP, who used the occasion to thank thee Las Vegas Amateur Radio Club for an important monetary donation:

--

Haynie: "I want to thank the members for the $1000 donation to the (ARRL) Education and Technology Fund. We think it is particularly important in as much as the Big Project as we call it -- in slang terms -- is teaching kids about Amateur Radio who will hopefully be the next engineers at your radio station or something like that. This exposure to electronics is very important to Amateur Radio and very important for industry.

So with that, have a good time , and again my thanks to the Las Vegas Amateur Radio Club for your vey wonderful and generous donation."

--

Well over 100,000 broadcasters and those in allied businesses attended the 2003 National Association of Broadcasters convention. Among them where three friends who hads not seen one another in almost three decades. They are Dick Flanagan, W6OLD, Martin Geisler, WA6TIC and this writer. All of us were members of the Palisades Amateur Radio Club back in the 1970's. Ill be back with more about this radio club after a short airplane ride home.

Annd less we forget. The N-A-B Amateur Radio Reception was again co-sponsored by Kenwood Communications and CQ Magazine.

Reporting from a quiet alcove just outside the Las Vegas Convention Center on my way to McCarren airport, I'm Bill Pasternak, WA6ITF, for the Amateur Radio Newsline. Don. (ARNewsline™)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the WD9AKO and K9BAR repeaters serving Bolngbrook Illinois.

(5 sec pause here)

**

RADIO LAW: HAM RADIO CC&R BILL REINTRODUCED IN CONGRESS

Another Congressional attempt is under way to provide relief to amateurs prevented by private deed covenants, conditions and restrictions from installing outdoor antennas. The ARRL Letter says that New York Representative Steve Israel has again introduced the "Amateur Radio Emergency Communications Consistency Act" into the current session of Congress. The measure, designated HR 1478, would require private land-use regulators such as homeowners' associations to reasonably accommodate Amateur Radio antennas consistent with the PRB-1 limited federal preemption. PRB-1 now applies only to states and municipalities. (ARRL)

**

RADIO LAW: CALIFORNIA PRB1-LIKE LAW TAKES A GIANT STEP

Some good news for hams living in the Golden State. ARRL Southwestern Division Director Art Goddard, W6XD, says that the California version of PRB-1 passed the Local Government Committee on a unanimous vote at its April 2nd meeting. Goddard says that the next step for A B 1228 is the full California State Assembly.

Representing ARRL at the Committee hearing were Dean Straw, N6BV and Pacific Director Bob Vallio, W6RGG. In his bulletin, Goddard took the time to thank Mike Mitchell, W6RW, Assembly member Bob Dutton and his staff as well. (ARRL SW Div. Newsletter)

**

SPECTRUM SHARING: SATELLITE-FED TRANSLATORS IN THE COMMERCIAL FM BAND

The FCC has assigned RM-10609 to a proposal by Calvary Chapel of Twin Falls and two smaller broadcasters. This, for authority to allow satellite-fed translators or Satellators in the "non-reserved" F M 92 to 108 MHz band. Amateur Radio's Bruce Tennant, K6PZW, has more.

--
As we all know, 92 to 108 Mhz is the band that is currently used by commercial broadcasters, over-the-air-fed translators and most Low Powe F-M stations. Currently, what are called Satellators are restricted to the 88 to 92 MHz band and the translator must be owned by the primary station.

But Calvary Chapel of Twin Falls and the other petitioners want the FCC to allow satellite-fed translators in the non-reserved F M 92 to 108 MHz band. The petitioners claim this proposal will have little impact on existing stations in the spectrum. This is because there is currently a freeze on new terrestrial translators in that band.

The FCC has not indicated when it might act on the Calvary Chapel of Twin Falls rules change request.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

So far the only major objection has come from National Public Radio. N-P-R generally supports the Twin Falls petition, but proposes that coverage distance limitations be set for Satellator operations. More is on the web at http://gullfoss2.fcc.gov/prod/ecfs/comsrch_v2.cgi (CGC Communicator)

**

HAM TESTING: FCC AND VEC'S TO MEET IN JULY

The 2003 National Conference of Volunteer Eximination Coordinators Conference in Gettysburg, Pennsylvania is set for July 25th. This is the annual get-together between the FCC and the Volunteer Examination Coordinators that maintain the question pools and handle all Amateur Radio testing.

Planners say that last years conference was a success and that they are looking for input for this year'a agenda. Please send any thoughts you have for this years conference to John Creel, WB3GXW. John's e-mail is WB3GXW@arrl.net (NCVEC)

**

RESCUE RADIO COMS: THE BOSTON MARATHON NEEDS YOU

If you are planning a trip to Massachusetts later this month and will have a hand held radio with you, the ARRL Letter says that the Boston Marathon can use you.

The 107th running of the event is slated for Patriots' Day, Monday, April 21st. Planners say that they still need more Amateur Radio volunteers to assist with communications for this year's event. If you want to donate your time, please contact Paul Topolski, WSEX by e-mail to w1sex@arrl.net or Steve Schwarm, W3EVE, at w3eve@arrl.net.

Once again, that's the Boston Marathon, on Monday April 21st and its looking for hams top help out. (ARRL)

**

ON THE AIRWAVES: THE LIBERAL RADIO NETWORK

Venture capitalists from Chicago are reportedly behind an effort to start a liberal leaning talk radio network. One that might offer an alternative to conservative talk show hosts heard across the airwaves these days.

The group will be called AnShell Media L.L.C.. Its backers are reportedly investing an initial $10 million. They are also hoping for assistance from like minded entrepreneurs.

With the intent to be on the air by this fall, the are talking with comedian and author Al Franken about working with the network. They also hope to attract other politically liberal entertainers and political guests as well. (ThePolicyPeport nerwsletter)

**

UPCOMING EVENTS: FIELD DAY - VCARS AT THE REAGAN LIBRARY

The Ventura County Amateur Radio Society will conduct it's Field Day 2003 operations on the grounds of the Ronald Reagan Persidential Library and Museum, in Simi Valley, California. According to Peter Heins, N6ZE, this will mark the third year of Field Day operations in conjunction with and co-sponsored by the Reagan facility. (N6ZE)

**

UPCOMING EVENTS: COMMEMORTING FRANK LLOYD WRIGHTS WESTCOTT HOUSE

The Westcott Wireless Preservation Association will be hosting special event station W8AGA on Saturday, May 3rd. The operation will taker place from Frank Lloyd Wright's Westcott house in Springfield, Ohio.

The Westcott Wireless Preservation Association serving the Westcott House Foundation by continuing radio operations at the Frank Lloyd Wright designed Westcott home. Wright designed Ohio's only prairie style house for Burton and Orpha Westcott in 1907. The house is now undergoing extensive restoration and will eventually be opened to the public as a house museum.

But in the here and now, the special event station is coming on the air. A special QSL card will be issued to any station with a confirmed QSO with W8AGA and who sends a QSL card and SASE to the Westcott Wireless Preservation Association. QSL information is on the web at

www.westcotthouse.org/w8aga (Press release)

**

CONVENTIONS AND HAMFESTS: MILWAUKEE - A SUPER SUCCESS

On the convention and hamfest circuit, word that last weekends A-E-S Superfest in Milwaukee Wisconsin is being called a super success. A late season storm made for some fairly inclement weather but it did not dampen the spirit of the regions ham community that showed up in droves to see what was new and buy what was hot.

According to industry sources the weather may have played to the advantage of dealers by driving the crowds to the display floor. And while Friday was a bit slow, Saturday more than made up for it with lots of high tickeet items moving out. We are told that averaged out sales were pretty good on both days and nobody is complaining.

The Superfesrt is held every April and is sponsored by Amateur Electronic Supply. (ARNewsline™)

**

CONVENTIONS AND HAMFESTS: RENO NEVADA IN MAY

And word that the Spring 2003 Reno Ham Swap will be held Saturday May 10th between 7:00 AM and 1:00 PM local time. The event is sponsored by the Reno Nevada Area Metro Simplex Amateur Radio Club. For Complete Details Visit the website at http://k7xc.tripod.com/hamswap/ (Via e-mail)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

HAM RADIO IN SPACE: BIG UK ARISS SUCCESS

Its one of the best ARISS contacts to date. This, as students at the Rushey Mead secondary school near Leicester England spent about 10 minutes talking with U-S Astronaut Ken Bowersox KD5JBP on board the International Space Station. It took place on Friday April 4th, and this is how it sounded:

--
contact audio
--

Rushey Mead is a U-K secondary school for 11 to 16 years olds. It also has an active amateur radio club. But for this special occasion, the GB2NSC station of the National Space Center was chosen for the space talk. John Heath, G7HIA operated the station. Here's more of the QSO.

--
contact audio
--

Students, teachers, parents, and the media were present as twelve youngsters asked questions about life in space of Ken Bowersox, KD5JBP.

More contact audio is at Howard Longs website. It is in cyberspace at http://users.skynet.be/fa059641/2003_04_01.htm (ARNewsline™ audio with courtesy of Howard Long, G6LVB.)

**

HAM RADIO IN SPACE: PC SAT ECLIPSE POWER PROBLEMS

AMSAT says that PC Sat is still going strong, but is on ragged edge of power budget during maximum eclipses. This is according to Bob Bruinga, WB4APR, who reports that controllers have caught the satellite on several occasions doing a low power reset.

Bruninga adds that fortunately they have been able to restore the bird before the batteries went to negative power budget. WB4APR recommends that since there are as many as 50 users per day, it is best if everyone turns off any unattended user stations at night when PC Sat is in eclipse. (ANS)

**

EMERGING TECHNOLOGY: SECURITY PROBLEM WITH SENDMAIL - PSTCH AVAILABLE

According to its developer, the most widely used program for transferring e-mail between computer networks has a security flaw. One that could allow attackers to disrupt the flow of e-mail and intercept messages.

The program involved is called Sendmail. The security flaw does not directly affect your personal computers but it does put e-mail and information sent over the Internet at risk. Fixes for the vulnerability are available, free of charge, at Sendmail's Web site by applying a patch or upgrading to the latest version of Sendmail.

Atlanta-based Internet Security Systems Inc estimates that Sendmail handles as much as three-quarters of all Internet e-mail traffic. Sendmail Inc. which developed the program is located in Emeryville, California. (Published news reports)

**

EMERGING TECHNOLOGY: TUBE-TYPE PC'S

It seems that a venerable old friend simply refuses to die the death of technical obsolescence. The vacuum tube continues its reemergence into the audio marketplace, this time -- believe it or not -- in Personal Computerss.

The first tube motherboard appeared last year in response to PC gamers who craved the allegedly "more natural" sound produced by vacuum tube technology. Those who have seen the boasrds call it a strange sight to behold.

More on this May-December marriage of filament and silicon can be found at the website at http://www.neoseeker.com/Articles/Hardware/Reviews/aopenax4btube (CGC Communicator, Clayton Creekmore and neoseeker.com)

**

ON THE AIRWAVES: DIGITAL RADIO MONDIALE IS ON ITS WAY

After long years of gathering a consortium, prototyping and testing, Digital Radio Mondiale has announced that there will be an official launch at the World Radio Conference in Geneva, in June. Thiis according to a report in shortwave.com.

Digital Radio Mondiale, better known by its initials D-R-M is the world's only non-proprietary, digital broadcasting system for short-wave, medium-wave and long-wave with the ability to use existing frequencies and bandwidth across the globe. With near-FM quality sound, DRM hopes to revitalize the AM broadcasting bands below 30 Mhz in markets worldwide.

And right on the heels of the launch announcement came the granting of two highly significant standards for DRM. First, the International Electrotechnical Committee has given the Digital Radio Mondiale on-air system its highest stamp of approval as an International Standard. This was followed by the International Telecommunication Union granting permission for any broadcaster to use existing frequency assignments for DRM digital transmissions. This, provided that there is no interference with other stations. (ASWLC)

**

INTERNATIONAL -IRELAND" A WALKERS FESTIVAL

Over in Ireland, word that theTipperary Amateur Radio Group provided emergency communications support for up to 300 walkers expected to take part in the A-her-low Hillwalking Festival. The event was held the weekend of April 5th and 6th in Irland's Galty Mountainsl. (GB2RS)

**

DX

In DX, word that G3RWL, will be active as 8P6DR from Barbados through the 20th of April on 10 to 40 meters. He will also be on 80 and 6

meters if he can arrange the antennas. (GB2RS)

And VK3OT will be active as VK9XI from Christmas Island through April 21st. He will be concentrating on CW on the H-F bands and 6 metres. Priority will be given to High Frequency CW when 6 is closed. More info is on the web at http://members.datafast.net.au/electronics/path.htm

**

THAT FINAL ITEM: THE PARC FIELD DAY FILM LIVES AGAIN

And finally this week some very good news for ypou ham radio cinema fans. After having been among the missing for over two decaders, a famous ham radio movie has surfaced. And it will soon have its first official public screening since its restoration was completed. The guy who has the movie on his shelf -- our own Bill Pasternak, WA6ITF, has some background on this ham radio cinematic classic:

--
The film's real name is simply Field Day 1971. It is a tongue - in cheek look at the planning and execution of the ARRL Field Day operating event by what was then one of the most active radio clubs in the United States. My home radio club The famed Pallisades Amateur Rado Club of Culver City California. Home of "good-guy the gokld plated radio" repeater.

Field Day 1971 was produced and edited by George Hively, W6GRH, -- then WA6YEA -- as a club project over thirty years ago. Hively, who has spent his life in the motion picture business wrote the script, supervised the filming, edited it together and provided the music and the narriation. And notice we said filming. Field Day 1971 was produced long before the advent of home videotape. It was shot using Super 8 millimerter motion picture film and consumer cameras. The sound track was on a separate tape cassette. In fact, it still must be projected that way -- even today.

A preview screening of the restored movie took place a March 8th at the HandiHams winter camp in Malibu California. They loved it. As a result of that enthuiastic welcome, a public showing of Field Day 1971 to the California ham radio community has been tentatively scheduled for Wednesday evening May 14th. This, hosted by the Santa Clarita Amateur Radio Club that meets just North of Los Angeles.

And for those of you who are wondering where the movie has been hiding the past 20+ years, this might surprise you. It has been kept safe and well protected by a former PARC member -- Richard Burton, the ex-WB6JAC. Richard contacted us a few months ago asking if we would like to have the movie. We said yes, and with the assistance of Anita O'Delll, N2IHX, the movie was brought back to projectable condition.

Because there is only one projectable print of Field Day 1971 available it cannot be lent out. But W6GRH tells Amateur Radio Newsline that plans call for it to be transferred to video -- either VHS casssette or

possibly DVD. And the sound will always match the picture that way. We hope.

With Field Day `71 -- the movie -- sitting on my desk as I record this, I'm Bill Pasternak, WA6ITF.

--

Meantime, those wanting to attend this first public screening in two decades of this riotous movie, you should consult the Santa Clarita Valley Amateur Radio Club website for meeting details. Its on-line at www.w6jw.org. Scroll down and click on "Monthly Meetings" for more. (ARNewsline™)

>some Extras. Its better to be lean (without code) and mean than fat and
>sluggish.

You ned to read his post a bit more closely.

Can you say..."sarcasm"...?!?!

>Only an appliance operator would refer to 27MHz as a bad segment, which shows
>you bought into the cult and have a limited view of amateur radio (appliance
>operator group).

(1) 27 Mhz IS a "band segment". Not a segment of any Amateur allocation,
but it IS a segment. Or didn't your "comm prof" teach you that?

(2) How does MENTIONING any given part of the electromagmetic spectrum
identify one as an "appliance operator", Vipul?

Here....13.5MHz...There's a band segment...Now, can you tell if I have
only factory built stuff, or do I like to build stuff too?

>That's what the Church of CW would like you to believe. If all non-CW
>activity
>is a lie, would you like broadcast radios to have only CW broadcasts? Of
>course
>not.

But WHY not? Think of all the spectrum we'll save from all those wasted
sidebands!

>Its actually the CW "gangsters" that tries to recruit with Morse code and

>methods to spread their lies. The methods and lies told by the Morsers are
>what's "despicable"

What's TRULY "dispicable", Vipul, is that an allegedly educated person is
allowed to act out in public like you do!

Oh? Those dots, dashes and abbriviations were just noise that wee
pretended to fill the airwaves with until voice was invented?

Those dots, dashes and dashes CONTINUE to be noises that people just
aimlesly fill the airwaves from almost every country on the face of the
earth...?!?!?!

>>They should be hit
>>with shoes.
>
>No, free choice is the answer. Unfortunately, they may recruit through Morse,
>but drive away quality. Unfortunately, that does not look good to regulators.

Oh! But wait! YOU would force us to NEVER use code adn to NEVER learn it!
"Free choice" is OK while YOU ae getting what YOU want, Vippy?

>God is not in hell - the Devil is. Long-time Morsers tend to have more fat.
>Less physical activity does that, you know.

God is in all places at all times. How do you think he supervises EE
classes, Vippy?

No luck needed, Brian. I believe that morse proficiency begins somewhat above the speed of ten words per minute.

>not
>more proficient than 5 wpm - they are two different skills.

How assinine.

Vippy, after you learned how to divide 468 by a frequency in MHz to find
the wavelength of a dipole on a calculator, did you forget how to do it on
paper? If so, I don't even want you around on Field Day or in ANY kind of
disaster situation...simulated or otherwise.

You never cease to amaze me with the narrowmindedness of your intellect.

Perhaps, but all we can see is your words.

You seem to WANT all those weapons of mass destruction NOW
to "prove" something.

>> You are safe up in the outskirts
>> of Boston...nobody would DARE go in there and do anything...
>
>Your knowledge of US geography is no better than your knowledge of Iraq's!

Whatever. Hartford, who cares. New England is several states
up in the northeastern tip of the USA. Not important to this
thread. Only important to the presumed aristocracy there.

>Well then, there is more than one possible reason for the inaction against
>Iraq in 1988, isn't there? In fact, it wasn't pacifism that caused world
>inaction, it was apathy.

Pacifism is a form of apathy.

>> [try to avoid the antagonistic "moral superior" phrasing]
>
>Should I have told you to go research it? Or is that "antagonistic 'moral
>superior'" phrasing reserved to you?

No. It is reserved for the League aristocracy.

>I don't recall having heard of Fort Irwin. All my military electronics
>business was conducted in the eastern US (Aberdeen Proving Ground, Fort
>Benning, Naval Research Lab) and in field locations (Aleutians, Diego
>Garcia). But I don't think any of that either validates or invalidates my
>point of view on Iraq.

Fort Irwin is the US Desert Warfare Training Center. That's where
the US armor and mechanized infantry trained to whip the Iraqis
in Desert Storm in '91 and again during Iraqi Freedom in 2003.
Training seems to have worked out. Want to fault it?

>> Jon, I'd already served my country in the military 1952 to 1960.
>
>How is that relevant? Does military service automatically make all of your
>opinions correct?

It lends one HELLUVA LOT OF RELEVANCE, Jon. It may not
be "correct" to your aristocratic outlook but it has relevance
after training to "close with, and destroy the enemy."

>> I don't really need some League person telling me where my patriotism
>> "should be." In ANYTHING.
>
>Has some League person been telling you that?

Several. For years. All of them were morse tested.

>Do you feel free to tell others where their patriotism "should be"?

I'm expressing an opinion.

If you don't like that opinion, go suck an egg. It's a free country
Jon. Remember those old civics lessons? Absolutely NOTHING
in the Constitution says I have to enjoy your opinions or tip my
to them or salute or whatever and shut up.

>>>> Nasty old USA is "to blame" for all of those, isn't it?
>>>
>>>Eh? Of course not. Your point being what?
>>
>> I don't know what in hell YOUR point is...but I admit some curiosity.
>
>What I'm curious about is whether you know what YOUR point is. I have my
>doubts.

Poor baby. You don't understand, really. Sometimes war is the
only solution out of a mess created by another.

Sooner or later some country was going to have to be the premptive
country in shutting down some regime or whatever threatening
others. In this new history, the USA and UK were partners in being
that first country.

I'm supporting that action. You don't like that. TS.

>> Are you here after an absence to stir up "action?"
>
>Just passing the time of day, Len. How about you?

You are mumbling about being a moral superior in realpolitik.
I don't think you are.

You might try to get back close to what the newsgroup was
created for in the first place. Amateur radio policy.

>> Are you and your League cronies all "moral superiors" in anything you
>> mention.
>>
>> Sure sounds like it...
>
>Oh, my! "Moral superiors"? Who is the one in this conversation who's
>claiming moral superiority on the basis of military service and defense
>work? Not me.

Yes, you've become a "moral superior" on geopolitics and
fighting for peace. You seem to dislike several politicians
who've made decisions...yet you don't seem to have the
qualifications to sit in judgement of them...other than that
wonderful "moral superiority."

Your "solutions" are to do nothing. Null solution.

>> You seem to imply that having an amateur radio license makes you some
>> kind of "moral superior" on things NOT about amateur radio.
>
>I don't imply it, you infer it based on your prejudices against amateurs
>and the League. I'm not responsible for your prejudices.

I'm not responsible for your aristocratic attitude, Jon.

[the cake was wonderful but some buttered rye bread would be nice]

I'm NOT "prejudiced" against "all radio amateurs." Just those too
full of themselves who think morse code is still king.

"The League" still can't get its act together on the morse code test
issue. They remain null, no opinion. No guts to take a stand on
the issue. Real "leadership" qualities there. <applause of one hand>

>> Please explain how demonstrated skill in morsemanship makes one an
>> "expert" or "moral superior" on geopolitics.
>
>That's just silly. Your obsession is showing agin.

"Agin?" Bad dialect.

War is bad, no-code is terrible evil filthy. Fight for peace.

There, I mumbled some phrases of familiar themes. Happy?

Now, what have you done to fulfill 97.1.(e)?

>Phil? The concept of equal rights for all and separation of church/state are
>fundamental to the American way of thinking. As such, the exclusion of
>others, based on religion or anything else, just doesn't feel right to me.

Firstly, there is no "separation of church and state" in the country although many - maybe even a majority - chafe at the power (mostly political) that the minority fundamentalist/Orthodox establishment wields as the swing vote in the constant coalition political system - Israel is the only significant country to still have a system of proportional representation by party in the legislature, and it's only been two years since the Prime Minister was elected by direct vote rather than by appointment within the party receiving the most votes.

When I lived there, I found that the concept of "separation" was foreign to even those who were dissatisfied with the religious control and felt that it was yet another thing that America was trying to foist upon them. It was literally a foreign concept.

We here regard "Jewish" as a religion. The Nazis regarded "Jewish" as a race. The truth lies somewhere between - it's a culture, an ethnicity. On the Israeli identity cards, that shows up as "nationality". We have friends who hold both US and Swedish passports (by birth) and who travel freely between the countries. They regard themselves not as Americans or Swedes but as "Jewish". This is very European - one can immigrate to most any European country, speak (or mis-speak) the language like a native, even become a citizen and be fully acclimated and integrated (to some extent) into the society, but yet they are not "French" or "Danish" or "Portugese" as the "people" there see it.

We here in the 'States have the concept of the Melting Pot, but as my erstwhile teacher the late Supreme Court Justice Thurgood Marshall once said about the American Negroes (he used that term to his dying day) "we either didn't get into the pot or we didn't get melted down".

> I believe you once said you hold dual citizenship.

I had to relinquish my claim to Israeli citizenship when I returned to the 'States to work for the FCC. I can get it back only if I immigrate to Israel (again).

> If so, how do you
>reconcile the two political systems? They seem totally at odds with each

>church/state like we have here or do you believe in the exclusion of others
>from full participation within a religious state? I truly hope this country
>is never controlled by any religion, though some religions are almost
>certainly seeking exactly that.

It has never neen a simple thing for me to resolve. Part of it is that I adhere to a denomination within Judaism which is considered unacceptable by the Orthodox (and vice versa, may I add), so I do believe in "freedom of worship separate from state control". However, I also believe that if I'm going to live in a country that is set up along ethnic lines that that is the system I can work is as long as the "ethnic" is mine.

Within that "ethnic" I strongly believe in equality. If I want a multi-ethnic culture, the "States is the place and that's one reason why I'm still here.

Interesting side light - when I was about to leave Israel to come to the 'States and work for the FCC, Motorola waved a lot of cash in front of me to come to Tehran and run their frequency management office (they were the communications management contractor to the Shah's government). That wasn't my "ethnic" and anyhow my then-wife missed all the conforts of the 'States.

First of all, both Arafat and Sharon have got to go. It's a very personal thing between them for many years, just as the business between Bush and Sadaam became personal.

Then, reasonable leaders will have to sit doen and revive Oslo. It can work. How it will work I leave up to my nephew who is an Israeli diplomat (and holds both a US and Israeli amateur call sign, may I add).

Who said that life has to be simple?

> and their peoples think.

Actually you agree with, or at least are immobilized by, those who
vigorously oppose acting against said despots and strongly oppose those
who finally have decided to act to end the despots brutal grip and the
threat to us. These attitudes and actions at taken
not for any altrusitic reason but instead from the position of primary
concern for their own fianancial advantage. How does that make any
of you much better than the despots?

"The friend of my enemy is my enemy". There's little difference in being their
friends
and in looking the other way. And by according their opinions the same weight
as those opposed to the despots, you condone same. All in the name of
"go along, get along" It's an attitude sure to eventually bring us down should
it become predominant.
The old ways won't do in the age of fast transportation, easy border crossing
and easily portable WMD. Couple that with a religion which we are "bound" to
tolerate when one of its main goals is the subjugation or destruction of all
others, and you have the recipe for disaster.

I know, I know- France, Germany and Russia say they just want to give
diplomacy more time. Time we may well not have. Isn't twelve years, eight of
them Clinton era years,
enough? Saddam has stonewalled for so long he truly beleived that he could
carry on with it indefinitely....and would have, by your leave. Meanwhile arming

terrorists worldwide with who-knows-what to use on US in the US.

Fortunately we now have a President with something besides his sex life and
his
alleged "legacy" on his mind, one who *doesn't* duck for cover at every
political noise.

When a former Clinton primary adviser states on TV that he thanks the good Lord

every day that we have Bush instead of Gore in the White House, it may mean nothing to you but you're a small minority.

And yes- Syria may well be the next focus. It looks more and more like they hav
e
supplied and supported Saddams regime throughout, and nave helped store and hide the WMD. Also are givign haven to Saddam's terrorists, those who manage to escape their countrymen's wrath. If it proves out that Syria is where some of Saddam's WMD have been taken, what choice do we really have except to go destroy them, even if it does require attacking then Syrian regime? It is only marginally less despotic than Saddam's, and is definitely a supporter and hotbed

of terrorists who operate abroad..

Does anyone over there remember who started what, why, and who did what to whom in order to create the absolute enviroment of mayhem that exists today?

The Israelis insist it's the Palestinians fault, and the Palestinians vice versa. I sympathize with Israel's right to exist, but at the same time I don't see Palestinian tanks mowing over Israeli homes and building "settlements" where only weeks ago Palestinians already lived.

I say we disarm them both, cross breed them for two generations, then dare them to kill thier own blood.

I don't expect any groveling by the Euros sixty or so years later, the
only reason I got into the subject of the Marshall Plan is because
it's a prime example of our well-established national inclinations,
e.g., there is no reason to expect that Iraq won't be another
beneficiary of our historic post war largess.

> >> For one thing, there are others who CAN help now. In 1948, who besides
> >> the US was in a position to supply significant financial help?
> >
> > Nobody. Which is my point.
>
> But others are in a position to supply help in this case. You asked for
> evidence that history won't repeat itself.

Ya made a wrong turn. I asked Dwight if he had any evidence which
indicated that we would treat Iraq any differently than we treated, as
examples, our former enemies the Germans and the Italians almost
immediately after WW2. But he ducked the bullet and responded "The
question now is what will happen next. Will we insert a government
that is truly concerned with the interests of the Iraqi people or will
it be a government more concerned with the political, military, and
business interests of us and our friends?"

So it seems that the question remains on the table in the minds of
some, mostly those who those who lost their bets about how events
would go in Iraq. Soreheads looking for a way out.

> One element of that is that it
> is at least POSSIBLE that others will help now. It was IMPOSSIBLE after
> WW2.

They're already circling their wagons. Sayeth Putin yesterday: "Well maybe we can help by writing off the $8-12 billion Iraq owes us". With Schroder and Chiraq clucking approvingly. Gee guys, thanks for all the "support". BLEH!

Then all three of 'em came off with this CRAP:

"But France, Germany and Russia, all opponents of the U.S.-led invasion of Iraq to topple Saddam Hussein (news - web sites), said they could not support any effort to begin a rebuilding program that was not led by the United Nations."

(Reuters)

This really cooks it for me. In other words they don't give a rat's patooie about relieving the suffering in Iraq, all they care about who controls the recovery effort. It's the Old Europe syndrome again, the suffering millions be damned, what really matters is CONTROL.

>
> Doesn't that also describe the behavior of the US until last year?

Yeah. Now that nonsense is over. Hugely.

> Do you
> think the US would have attacked SH had it not been for 9/11?

Of course not. We wouldn't have eventually nuked Hiroshima and Nagasaki if the Japs hadn't hit Pearl Harbor either. We almost invariably have to get caught with our drawers down around our ankles before we wake up, come roaring out of our "splendid isolation" and do what we gotta do. An unconventional war on terrorism was formally declared as a result of 9/11 as was conventional WW2 for us on 7/8 Dec 41. The Taliban & OBL have been one pair of targets, Saddam's regime is the latest. Unconventional. Fight fire with fire.

That's pretty Machiavellian but I like it. Problem there is that
they'll screw it up and blame us for putting them in a position to
screw up.

> > I basically agree with that WRT to the current situation. What I do not

>
> Who said they could TELL us to do anything?

Are you kidding? The millions who have opposed our invasion of Iraq
without a UN mandate, a permission slip from the UN to take out
Saddam. If that ain't an attempt to tell us what we can and cannot do
I don't know what is. Din work. I hope they get used to it.

> I'm saying let's see if we can
> get agreement on what will be done.

Yeah, right: While they squabble puff and strut at great lengths as
usual the Iraquis are out of water, electricity, gauze pads and civil
government. Dubya is not gonna let that go very far before he flips
'em the 'ole digit again and we do what we gotta do.

> You know, my neighbor doesn't have the right to tell me what to do, nor I

> costs nothing.

Normally yes, that's only common sense. But there can come a point
when the talking has gotten you nowhere and ya take it to the next
level and call the cops.

> Besides, Tony Blair wants to try to have the UN involved, and don't you
> think we owe him at least a shot at it? He's certainly been a stand-up
> guy.

I could not agree more.

> Why would you want to throw him under the wheels of the bus,
> politically speaking?

I'm not suggesting that, he very well might be able to get somewhere with it. I'm not a Dubya lemming by a long shot, I'm not at all enthralled by Texas Cowboy hipshot politics national and international and I think Tony can be the necessarey counterbalance if he has a shot at playing that role. But in the end he knowingly and voluntarily stuck his neck 'way out and as every politician knows sometimes ya get get the chopping block when ya do that.

From N2EY:

>EE isn't a growth industry? Then why did you go into it?

Because I liked build'g ckts. I did what I like doing. I didn't look to see if it was a growth industry or if it was popular.

>You're usually vry unclear. PArt of the problem is that you attach your own >definitions to words, rather than use the definitions everyone else uses.

Problem is every-1 else uses the wrong def. For ex., the word "Engineer" is often rongly used. Some "Engineers" R lower than the lowest of <REAL> techs.

>For
>example, you talk about "ham radio" as if it is not the same thing as
>"amateur
>radio". To everyone else, the two terms mean the same thing.

We have amateur radio licenses, not Ham radio licenses. "Ham radio" is a sub group of amateurs. Some Cbers R amateurs (tho this be illegal).

It is legal to xmit on the broadcast band without a license, so this can be "amateur radio", but NOT "Ham radio" (since they not have amateur radio license).

Just from this 1 example, "amateur radio" is NOT the same as "Ham radio", tho there R overlaps.

>>which means Morse code is more useful
>>(according to N2EY's logic).
>
>If something is used more, is it not more useful?

Here's the logic:
A: To many people, including me Morse code is fun so I use Morse code.
B: Is Morse really useful?
A: Yes, because many people use it.

You can substitute anything U find fun, such as cable TV. Then cable TV becomes useful.
Don't confuse "fun" with useful. More Hams use it because more Hams find it fun. That does not make it more useful.

2324. Re: Honest code elimination question...no flames please

From K4YZ:
>How does MENTIONING any given part of the electromagmetic spectrum
>identify one as an "appliance operator", Vipul?

Because that band segment ,27 MHz, is not amateur radio, its CB.

>If all non-CW
>>activity
>>is a lie, would you like broadcast radios to have only CW broadcasts? Of
>>course
>>not.
>
> But WHY not? Think of all the spectrum we'll save from all those wasted
>sidebands!
>

So now you want EVERYONE to learn Morse code, even non-amateurs?

>Oh! But wait! YOU would force us to NEVER use code adn to NEVER learn it!
> "Free choice" is OK while YOU ae getting what YOU want, Vippy?

I would never force others not to use code, if they wanted to. So why should
code be imposed on people that don't want to learn it?

Why would I go fight them now, 30 years after the battle ended? I
don't have a duty to do so, and it would be wrong to do so now. Our
country is no longer at war with anyone in Vietnam.

You clearly state that you are on ham radio, go back to the parts,
"I'm on 2m. I'm on 160m through 70cm."

You're not on ham radio in any way shape or form. You're only on the
internet when you're posting here.

> > > > They're

Yet somehow you are able to communicate with Len. I wonder how that
can be if he isn't licensed in the amateur radio service?

Maybe this isn't ham radio?

That would be 11wpm. I listed it above as one of your choices.

Don't the people of France and Germany vote?

> Criticize where criticism is due. I do not
> fault the French or German, or any other, people in general. Nor should
> anyone.

Why not? Assessing fault is as much a right as free speech.

I can recognize someone's right to free speech, but I am just as free
to fault that speech as being unAmerican, unpatriotic, etc.

Cheers,
Bill K2UNK

be?

Those analysts that climed we were bogged down, the war would
become another Vietnam, we didn't have enough troops, the
supply line was too long...they were all wrong...and I never
accorded them any credibility when they said what they did.
In cointrast, the military advisors on FOX News were right
on target.

Do they belive war isn't brutal? (I must have missed that paragraph in the
BoD minutes!)

Notice: Len, completely unable to justify his statement that those who've never served in any military believe that war isn't brutal, tries flailingly to change the subject.

> Which "side" was the aggressor in the Holocaust?

The ones who committed aggression against their own peoples and those of neighboring countries. That would be the Nazis and their allies.

> Do you need a PowerPoint Presentation and laser pointer to show which
> side was "good" and which was "bad?"

No, why, do you have a PowerPoint presentation? Does it show that the Soviets were good guys from December 7, 1941 until September 1, 1945 but bad guys before and after that period?

>>> "Mutually-Assured Destruction" involves two powers EACH possessing
>>> annhilation weapons. That policy did not involve Iraq.
>>
>>Exactly. There have been wars between a power with WMD and a power
>>without (e.g., US/Vietnam, USSR/Afghanistan) yet WMD were not used.
>>Clearly, MAD was not the deterrent in these cases.
>
> Jon, "MAD" wasn't really under discussion, just used as an analogy.

An analogy to what? The point under discussion was that decision makers had been pacifist enough (Jim says) or not desperate enough (I say) to use WMD (nukes, anyway) since 1945. You said "not suicidal" and invoked MAD. So, again, in analogy to what, exactly?

>>Something else must have been. What
>>do you think it was?

If you answer coherently you will perhaps clarify or correct your muddled thinking. It's okay with me if you are unable or unwilling to do that.

> Why not? You say "war is bad" then offer no solution to an impending
> crisis clearly building and want to DO NOTHING. Very peaceful.

When did I say that I wanted to do nothing, Len? My objection to what the Bush administration has done is that by being clumsily disingenuous about their purposes they botched the diplomacy leading up to the war, leaving us at odds with our natural allies and making it likely that we'll have to foot the entire bill (in contrast to Gulf I, where most of the financial cost was borne by others).

>>> Would it please you if, in the future, Iraq got to the point of

> Pacifism is a form of apathy.

It can be if it's done unthinkingly. So is the unthinking beating of war
drums. Both pacifism and militarism can be the result of apathy or the
result of engaged thought.

>>> [try to avoid the antagonistic "moral superior" phrasing]

> Jon. Remember those old civics lessons? Absolutely NOTHING in the
> Constitution says I have to enjoy your opinions or tip my to them or
> salute or whatever and shut up.

Have I suggested you should shut up, Len? Have I asked you to salute
anything? No, all I've done is expressed my own opinion, which is
different from yours in some respects. Apparently, you feel that the mere
act of disagreeing with you constitutes an attack on your right to express
an opinion. You couldn't be more wrong. In my opinion, that is.

>>What I'm curious about is whether you know what YOUR point is. I have my
>>doubts.
>
> Poor baby. You don't understand, really. Sometimes war is the only
> solution out of a mess created by another.

Is THAT your point? You sure take a roundabout way to make it, dragging in
unrelated issues all the while. If you bother to pay attention to what
I've said, you'll know I agree that war is sometimes necessary.

> Sooner or later some country was going to have to be the premptive
> country in shutting down some regime or whatever threatening others.

>
> I'm supporting that action. You don't like that. TS.

What makes you think I don't like it? What makes you think I care whether
you do or don't support the war?

>>> Are you here after an absence to stir up "action?"
>>
>>Just passing the time of day, Len. How about you?
>
> You are mumbling about being a moral superior in realpolitik. I don't
> think you are.

I don't think I am either. See? We agree on something! I also don't think
you're a moral superior, but I'm not sure we agree on that.

> You might try to get back close to what the newsgroup was created for
> in the first place. Amateur radio policy.

If you feel this discussion shouldn't be taking place here, why are you
participating in it?

> Yes, you've become a "moral superior" on geopolitics and fighting for
> peace. You seem to dislike several politicians who've made
> decisions...yet you don't seem to have the qualifications to sit in
> judgement of them...other than that wonderful "moral superiority."

I'm just expressing an opinion. I think my opinion is better thought out
than yours, but there's no moral superiority involved.

> Your "solutions" are to do nothing. Null solution.

Wrong.

>>> You seem to imply that having an amateur radio license makes you
>>> some kind of "moral superior" on things NOT about amateur radio.
>>
>>I don't imply it, you infer it based on your prejudices against amateurs
>>and the League. I'm not responsible for your prejudices.
>
> I'm not responsible for your aristocratic attitude, Jon.

That attitude exists purely in your imagination, Len, informed solely by
your prejudices.

> I'm NOT "prejudiced" against "all radio amateurs." Just those too
> full of themselves who think morse code is still king.

Morse obsession.

>>That's just silly. Your obsession is showing agin.
>
> "Agin?" Bad dialect.

Ah, you are reduced to making fun of typos. Not a compelling argument for
your point of view, Len.

Jon

Jon, that is bunk. Many hate what we are...free,
democratic and successful...and they don't care what we think

Cheers,
Bill K2UNK

As you are one who is not proficient in morse and who does not use or even like morse, I'm sure there are any number of things about it of which you are not aware. That hasn't stopped you from making sweeping statements which have no basis in fact.

To quote a Clint Eastwood character: "A man's got to know his limitations".

Actually, you have no way of knowing that. During the period which
elapsed between the time you asked the question and the time I responded
to it, I've managed to work in a number of other activities which had
nothing to do with usenet.

I don't communicate with Len on the 2m ham band.

> Maybe this isn't ham radio?

You've taken a wrong turn somewhere. I stated that Len doesn't know
what goes on 2m FM as he isn't a licensed ham.

You just jumped to another wrong conclusion. You also listed speeds of
12-40 wpm. All of those are somewhat higher than ten wpm.

The problem is, Dick, that does not in the least characterize my point of view. You want to pigeonhole everyone into one extreme or the other. I believe the Bush administration was inept in its diplomacy, and I'm not sanguine that they'll do better. And I'm distrustful of the Administration because I think they are disingenuous about their motives. But I also think that the removal of Saddam by force was justified. And I'm delighted that the human costs of doing so have been relatively light so far.

> "The friend of my enemy is my enemy". There's little difference in

> us down should it become predominant.

Our task is to change the views of those who were, and still ought to be, our friends. Had the rest of the world stood together against Saddam, there's a good chance that under the threat of troops ringing his country he would have grudgingly acquiesced in disarming himself of WMD. That was, after all, the stated purpose of the war. But we drove our partners away from us both before and after 9/11, making them suspicious of us. The blame for the disunity of the UN belongs to France, Germany, Russia AND the US.

I think the Rumsfeld/Wolfowitz/Perle coterie went out of their way to piss off "Old Europe" because the last thing they wanted was a peaceful resolution that resulted in a disarmed Iraq with SH still in power. They were committed to regime change from day one, and the WMD issue was a red herring used to scare Americans into supporting something they likely wouldn't have supported otherwise.

In the event, though, I think the war was justified by the massive human rights violations in Iraq. (Of course, we only seem to care about human rights violations when the violators are not our allies.) Too bad we weren't smart enough to convince others besides the Brits and Aussies to join us so we wouldn't have to carry the entire load.

> The old ways won't do in the age of fast transportation, easy border

Your understanding of Islam is wretchedly misinformed.

> eight of them Clinton era years,
> enough? Saddam has stonewalled for so long he truly beleived that he
> could carry on with it indefinitely....and would have, by your leave.

If we (Bush I, Clinton AND Bush II) and other Western countries had had a consistent policy and been willing to make it effective, we might have been able to avoid this problem. If we had cared as much about the poor Iraqis in 1992 as we claim to now and hadn't stood by while SH suppressed their uprisings by massacring them, we might have toppled him then and perhaps avoided the problem. Those were failures of will and of diplomacy.

If we don't stand together with other democracies, we'll find ourselves in the position of always having to solve problems by going to war. Is that the best possible approach? Shouldn't we try to effect change peacefully where it is needed by standing together with others, resorting to war only when there is no other choice?

> Meanwhile arming terrorists worldwide with who-knows-what to use on US
> in the US.

There is scant evidence that Saddam was arming terrorists against the US, certainly not with WMD. There were perfectly valid reasons to eliminate Saddam. That isn't one of them.

> And yes- Syria may well be the next focus. It looks more and more like
> they have
> supplied and supported Saddams regime throughout, and nave helped store
> and hide the WMD.

Syria has had WMD and the means of delivering them for a long time.

There are reports of Iraqi WMD scientists fleeing to Syria. Some reports say they are expected to seek safety in France. Is France the next target after Syria? The French have WMD, too, after all!

> Also are givign haven to Saddam's terrorists, those who manage to escape

> is only marginally less despotic than Saddam's, and is definitely a
> supporter and hotbed of terrorists who operate abroad..

Are you aware that before the Iraq crisis the Administration itself said the Syrians had been quite helpful in rooting out Al Qaeda? Diplomatic efforts were responsible for that, not warfare. But I suppose you'd prefer we give up on the peaceful approaches that are working well. After all, we don't give a damn what anyone else thinks.

Jon

You lay too much importance on voting, Bill. It *used* to mean something.
I don't think it does any more. There's too much evidence that the
politicians do whatever the hell they damned well please once they are in
office.

> >
> > Criticize where criticism is due. I do not

Because I think it's pretty damned stupid to blame a whole country of people
for what their governments are doing. Now, if you think it's OK and the
right thing to do, you go right ahead. But, I think you're wrong to do so.

>
> I can recognize someone's right to free speech, but I am just as free

You seem to be forgetting that my point is that PEOPLE of a nation cannot
generally be blamed for what their governments are doing. I certainly don't
want to blamed for anything my government does, since I DIDN'T vote for
them. Nor do I want to be blamed when I think I'm voting for someone who'll
actually represent the people and they turn around and act like every one

else--doing what they please.

What you said was: "Did you notice that we didn't get much if any help from the UN when we almost single-handedly rebuilt Europe after WW2? What shred of evidence do you have which indicates that history will not repeat itself in the case of Iraq?" Perhaps you can see why I took "shred of evidence ... that history will not repeat itself" as referring to the helpfulness of others rather than to the behavior of the US.

As for shreds of evidence about US behavior, consider the case of Afghanistan. Despite assurances from the US that copious help would be coming, the Administration's attention to the problem has been spotty. For example, the Administration's 2003 budget included no request for Afghan humanitarian or reconstruction aid at all! This oversight isn't indicative of a program that has a high priority. One wonders if Iraq will suffer from the same neglect once we're on to the next adventure.

> So it seems that the question remains on the table in the minds of some,

No question that they are concerned about control. So are we!

>> Do you
>> think the US would have attacked SH had it not been for 9/11?
>
> Of course not. We wouldn't have eventually nuked Hiroshima and Nagasaki
> if the Japs hadn't hit Pearl Harbor either.

So why should France and Germany condone attacking SH? Put it another way: If it had been the Eiffel tower and the Brandenburg Gate that OBL's crowd

had attacked, would the US have supported them attacking Iraq? I'm not so sure.

> We almost
> invariably have to get caught with our drawers down around our ankles

> the latest. Unconventional. Fight fire with fire.

There is little evidence that Saddam was directly supporting OBL and crowd, and certainly not with WMD. Saddam was a slug and deserved to be squashed. But it's unclear that doing so will help win the war on terrorism.

>> If we blow off the UN we're letting them off the hook. They can say

They can only get away with that for so long. Even their own people will smell a rat eventually. If, that is, we stop insulting them and making them think the US is the problem.

>> > I basically agree with that WRT to the current situation. What I do

> know what is. Din work. I hope they get used to it.

There's a difference between requiring permission and wanting to achieve consensus. If your characterization were correct, those millions would have continued to oppose the war after the 48-hour ultimatim. But most did not. Clearly, once they became convinced that diplomacy had run its course, they were satisfied. That hardly translates to requiring the UN's permission.

>> You know, my neighbor doesn't have the right to tell me what to do, nor

>Because I liked build'g ckts. I did what I like doing. I didn't look to see
>if
>it was a growth industry or if it was popular.

Gee whiz...ya think SOME folks get into Amateur Radio for similar reasons
and without wondering if it's "popular" or not...?!?!

>Problem is every-1 else uses the wrong def. For ex., the word "Engineer" is
>often rongly used. Some "Engineers" R lower than the lowest of <REAL> techs.

You been drinking last night, or do you have an 8-year old ghost writing
for you today?

Do you realize just how silly this sounds and looks?

>We have amateur radio licenses, not Ham radio licenses. "Ham radio" is a sub
>group of amateurs. Some Cbers R amateurs (tho this be illegal).

WHOA! Where in the Blue Blazes did you come up with THAT gem...?!?!
CBer's can't be licensed Amateurs and vice versa...?!?!

SHOW ME in ANY part of the FCC rules and regs that say THAT, Vipul ! ! !

>It is legal to xmit on the broadcast band without a license, so this can be
>"amateur radio", but NOT "Ham radio" (since they not have amateur radio
>license).

Ahhhhh....You ARE drunk! Or stoned...Or maybe both?

It is NOT illegal to "xmit on the broadcast band without a license"...

Read part 15, Vippy.

>Just from this 1 example, "amateur radio" is NOT the same as "Ham radio", tho
>there R overlaps.

Amateur Radio and "Ham" radio are one in the same. No "overlaps"
involved. The same thing.

Now go sober up and don't come back before you do. Or fire that 8-year
old. Your "stuff" is hard enough to follow as it is.

Where did you go to college again?

Steve

"Lower"? In what way?

>>For
>>example, you talk about "ham radio" as if it is not the same thing as
>>"amateur
>>radio". To everyone else, the two terms mean the same thing.
>
>We have amateur radio licenses, not Ham radio licenses.

That's right. But the two terms mean the same thing. Been that way for many decades. Only you make a distinction.

>"Ham radio" is a sub
>group of amateurs.

No, the two groups are the same. Identical sets.

>Some Cbers R amateurs (tho this be illegal).
>
A cber who gets an amateur radio license is both an amateur radio operator and a cber. I know several who have dine just that - most are nice folks, a few are not. Nothing illegal about any of it as long as all FCC rules are followed.

>It is legal to xmit on the broadcast band without a license, so this can be
>"amateur radio", but NOT "Ham radio" (since they not have amateur radio
>license).

Incorrect. By definition, amateur radio requires an amateur radio license. The term "amateur radio" is DEFINED that way.
>
>Just from this 1 example, "amateur radio" is NOT the same as "Ham radio", tho
>there R overlaps.
>
Which version of AOL are you using? The spellchecker is in every version from at least 3.0

>
>Here's the logic:
>A: To many people, including me Morse code is fun so I use Morse code.

That's true for me. It could be true for you, too.

>B: Is Morse really useful?

Yes, by definition

>A: Yes, because many people use it.
>
>You can substitute anything U find fun, such as cable TV. Then cable TV
>becomes useful.

Only if it is actually used.

>Don't confuse "fun" with useful.

I don't.

A thing is useful if it has a use. Last night I used Morse code on the amateur radio 40 meter band to communicate with 3 other radio amateurs. Lots of fun.

I used the homebrew 100 watt 80/40/20 meter transceiver I designed about 8 years ago for those QSOs. It is powered by homebrew power supplies, and sits on a homebrew table and shelf arrangement that also holds my homebrew transmatch/SWR meter/antenna&rig selector, homebrew speaker, homebrew T/R system. All of which I designed and built myself. Also on the table are an Elecraft K2 (designed by others but built by me), a Telechron mechanical

digital 24 hour clock (built from the parts of several junk clocks of the same manufacture) and my six radiotelegraph keys (all factory made). Plus a lamp from Ikea, some pencils and paper, etc. No computer yet.

When's the last time you contacted another radio amateur using a transceiver you designed and built yourself, Vipul?

>More Hams use it because more Hams find it
>fun. That does not make it more useful.

Sure it does!

In the following deiscussion, the term "ham" and "radio amateur" mean the same thing - just like in any other rational discussion)

If only two hams use Morse code, then it is only useful for those two hams to communicate with each other. One possible 2-way QSO.

If three hams use Morse code, then it is useful for those three hams to communicate with each other. Three possible two-way QSOs and one possible three-way QSO. Total of four possible QSOs

If four hams use Morse code, then it is useful for those four hams to communicate with each other. Six possible two-way QSOs, four possible three-way QSOs and one possible four-way QSOs. Total of eleven possible QSOs.

You can work out the progression for yourself. It's clear that as the number of hams using Morse increases, so do the number of possible QSOs. More possible QSOs equals more useful.

You cannot escape the logic. Not only is Morse code useful for radio amateurs, it becomes more useful as more hams use use it.

None of which means any particular ham MUST use it, or that atest for it MUST be retained. Just that it's useful.

73 de Jim, N2EY

> must indicate morsemanship to you.

I don't use a hammer for that, even though I have several hammers. Also drills, saws, soldering tools, wrenches, pliers, socket sets, and a number of other tools.

For sending Morse code I have a selection of four Vibroplex bugs, a J-37 straight key, and a new Mini-Paddle (thanks to the generous ham who gave me the latter).

>
>>>which means Morse code is more useful

>
> Morse code is NOT "useful."

That is biased, incorrect, a mistake, an error. It is spin, propaganda, self-interest, and a lot of not too good attributes.

In short, Len, it's just plain wrong.

If a thing has a use, it is useful. I used Morse code to communicate with three different hams last night on the 40 meter band. Great QSOs.

Of course Morse code is not useful to someone who doesn't know how to use it, just as a book is not useful to someone who cannot read (except perhaps as fuel or to prop up wobbly furniture).

> Of all the US radio services that
> existed since the end of WW2, only two retain morse code

So what?

> One of them
> is maritime radio services but the maritime world has gone over
> to voice and data and GMDSS has supplanted the old 500 KHz

> morse-required international distress and safety frequency.

And the other is...amateur radio! And this is...an amateur radio newsgroup! And we're discussing whether Morse code is useful...in amateur radio!

How about that, Captain Obvious? ;-) ;-) ;-)

Since Morse code IS used in amateur radio, it IS useful to amateur radio operators.

Why does that bother you so much?
>
> Morse code mode is slow and error-prone in requiring humans
> at each end to be the encoder and decoder.

Guess people shouldn't talk to each other then, huh? Humans at each end, encoding, decoding, making mistakes....

> Maximum
> throughput is, at best, 30 WPM only be very skilled and
> experienced morsemen.

That is biased, incorrect, a mistake, an error. It is spin, propaganda, self-interest, and a lot of not too good attributes.

In short, Len, it's just plain wrong.

The *best* skilled ops do at least twice 30 WPM. I can do 40-45 wpm on a good day. Effective throughput is much higher due to the use of abbreviations, prosigns, Q signals, etc.

> The slowest teleprinters in radio
> communications have been 100 WPM for four decades,

That is biased, incorrect, a mistake, an error. It is spin, propaganda, self-interest, and a lot of not too good attributes.

In short, Len, it's just plain wrong.

Lots of 60 wpm teletype in use, though not as much as before. I was using 60 wpm machines on the air in the mid-70s. Less than four decades ago.

> can
> do so 24/7 with enough paper to reload, don't need food,

> rates can go to 200+ WPM equivalent and use forward-
> error correction codings to improve reliability through
> interference.

Sure. Very useful. Just like Morse code. Hams use all sorts of modes, Len.

> Every OTHER US radio service gets along quite fine without
> using morse or ever envisioning its use.

So? Their needs, goals and resources are different.

What is wrong with live and let live?

> US amateur radio
> licenses MUST have demonstrated morse code cognition
> to have below-30-MHz privileges.

Until the treaty is changed and FCC drops Element 1, that is true. A simple, 5 wpm, receive-only, one-time-in-your-life test is all that's been required for almost 3 years now.

On the other hand, no code skill has been required for an amateur radio license giving all privileges above 30 MHz. Been that way for over 12 years. Lots of real, genuine, first-class, fine-and-upstanding hams hold that class of license. All part of the big happy family we call amateur radio.

Besides, we're talking about Morse code USE, not the TEST. The test is all but gone.

But the USE will continue for a long, long time. Live with it.

>which can and often is used by our enemies to bolster the
>position of our enemy (Jane Fonda going to Hanoi...perfect example)

Jane Fonda didn't just say no. Nor did she just go to North Vietnam, which in
itself is not unpatriotic. (She could have brought back valuable intelligence
just by describing what she saw - highly patriotic).

What Hanoi Jane did was to voluntarily commit actions in enemy territory that
directly resulted in harm to American POWs and possibly others. These actions
are well documented (see:

http://www.snopes.com

for a detailed description of what has and has not been proven about her
actions there).

In addition, her actions actually damaged the antiwar movement and probably
extended the war. Just my opinion.

>4. Those that demonstrate and in so doing, violate the law which
>infringes other people's rights.

See below
>
>I support 1 and don't consider it unpatriotic.

Agreed.

>I support 2, but believe the participants should understand
>they may be giving aid/comfort to the enemy and that they
>should understand and accept responsibility for their
>public comments.

That depends on what the comments are. Each has to be judged on its merits.

>I believe 3 and 4 are clearly unpatriotic.

I agree 100% on 3.

4 is another "it depends" case. Blocking traffic or destroying govt. property is simply criminal activity UNLESS it can be shown that a law is being intentionally broken so that said law can be tested in court. This was done by civil rights demonstrators who sat at the "wrong" lunch counters and refused to give up bus seats.

That said, it's hard to see how blocking traffic in San Francisco can force the courts to test the legality of any war.

--

For a radio-related example, imagine if the FCC somehow banned all live radio/TV/internet coverage of anti-war demonstrations. (I doubt very much any administration would do this, but let's do the thought experiment anyway.)

Suppose some hams defied the ban and used ATV linked to websites to cover various anti-war demonstrations. Suppose they were hauled into court on rules violation charges. (FCC knew who they were because they scrupulously followed all other FCC rules, including ID and non-broadcast rules).

They would then be able to challenge the constitutional basis of the law banning the coverage. (I'm guessing they would win). Their actions would certainly be patriotic because they were forcing the system to work in accordance with the Constitution.

Anybody besides me remember the NSIN?

>Your mileage may vary,
>but that's my opinion.
>
Sounds pretty reasonable to me, Bill.

No, I meant CBers experimenting WITHOUT an amateur radio licence -thats illegal. Technically they are radio amateurs (not professional).

>It is NOT illegal to "xmit on the broadcast band without a license"...

Thats what I said. So, you agree with what I said.

Since they are xmitting on this band, they are radio amatuers.
But, since they don't have amateur radio license, they are not a Ham.

Therefore, there are some radio amateurs that are not Hams.

>No, I meant CBers experimenting WITHOUT an amateur radio licence -thats
>illegal. Technically they are radio amateurs (not professional).

You're STILL wrong, Vipul. CBers CAN "experiment" without an Amateur license...They just can't make any adjustments to the transmitter itself. There are DOZENS of other things they can do with their stations that doesn't violate Part 95.

>>It is NOT illegal to "xmit on the broadcast band without a license"...
>
>Thats what I said. So, you agree with what I said.

That's NOT what you said. No, I do NOT agree with you.

>Since they are xmitting on this band, they are radio amatuers.
>But, since they don't have amateur radio license, they are not a Ham.

People transmitting on a Part 97 allocation without a license and not in compliance with Part 15 are BOOTLEGGERS.

>Therefore, there are some radio amateurs that are not Hams.

Nope. Licensure under Part 97 is necessary to be considered a "radio amateur". Anyone else is just a "radio hobbyist".

>>"amateur radio", but NOT "Ham radio" (since they not have amateur radio
>>license).
>
>Incorrect. By definition, amateur radio requires an amateur radio license.
>The
>term "amateur radio" is DEFINED that way.

It seems too complicated for you. I will try to be clearer. Try to follow.

A radio amateur includes someone that experiments with radio circuits.

It is legal to build circuits and transmit on the broadcast band. A person who builds a circuit and transmits on the broadcast band is a radio amateur.

If that person does not have an amateur radio license, that person cannot be a Ham.

Only one example is needed to prove the assertion. There exists a group of radio amateurs (broadcast band experimenters) such that they are not Ham (no amateur radio license).

So "amateur radio" is not the same as "Ham radio".

>I used the homebrew 100 watt 80/40/20 meter transceiver I designed about 8

From K4YZ:

>OK...Well, I have mentioned 27Mhz on numerous occassions...Does the mere
>mentioning of CB make me an appliance operator?

No, but the author referred to people who operate on CB as "filthy". The author then proposed "Morse code" as the solution for this. Morse code is operating an appliance - although with real-time <human> encoding/decoding.

>Sure...Why not. If Morse Code was taught from grade school, it would be
>exceedingly easy to learn and become a part of our normal activities of daily
>living. In ONE GENERATION, we could reduce the ened for electromagnetic
>spectrum by at LEAST 90%.
>

You heard it here. K4YZ wants EVERYONE (not just radio amateurs) to learn Morse code.

We have more than enough spectrum to make our lives easier. There is no great need of conservation. In fact, much of TV spectrum and even amateur radio spectrum is unused. Learning Morse code would be an unneeded burden on everyone.

>If we teach it from "Day 1", they won't know the difference.

Nothing special at all. Auctioneers do not lose the ability to talk at normal speeds. Musicians can still play Brahms lullaby even after they've mastered "The Flight of the Bumblebee". It's an inherent ability of the human brain to be able to handle information at the highest speed it is trained for and speeds SLOWER than that.

>

You are all messed up in your definitions. Where on earth did you get them?
We are licensed in the Amateur Radio Service. This is the exact term used
in the FCC rules. Common speech reserves the term amateur radio (not
capitalized) to those licensed in the Amateur Radio Service. Ham radio is a
slang term for the Amateur Radio Service. They are one and the same thing.
Ham radio is thus NOT a subset of amateur radio. On the other hand, CB is

never referred to as amateur radio in common speech either by the ham radio community or the CB radio community. FCC rules use the term Citizen's Band Radio Service and the common term is CB radio.

You cannot impose your personal preference of definitions on terms as actually used. It just doesn't work and makes a mess of any attempt to communicate. You need to use the terms in the same manner as the majority of speakers use them. It is this majority consensus of usage that eventually becomes the dictionary definition. Dictionaries are intended to document and support the current usage of the language not freeze it in time. This is why dictionaries are periodically revised, to capture the new and/or changed meanings of words as used in common speech.

>True, but I couldn't imagine doing in anything else. So I would not know what
>else to major in.

English Composition is a sure bet to not be on the list.

>No, thats society's problem. Unclear (or even dishonest) definitions badly
>affect those involved.

Sorry Vippy...YOU are the one with the perception problem here. It's YOUR
place to fix it. Sorry you don't agree.

>What if others call a cheese sandwich a 2N2222, and I say "no that's a cheese
>sandwich"?

Then you've still got a problem. If everyone ELSE calls it a 2N2222, then
YOU had better call it one too if you expect to eat.

>It seems too complicated for you. I will try to be clearer. Try to follow.

WE understand fine. That you want to call a spade a carrot, is fine, but
it's still a spade and you're wrong. Sorry.

>It is legal to build circuits and transmit on the broadcast band. A person
>who
>builds a circuit and transmits on the broadcast band is a radio amateur.

No...A person who builds a circuit and transmits on the broadcast band is
either an amateur BROADCASTER, or a radio HOBBYIST.

A Radio Amateur is a person who has taken the Amateur Radio examination(s)
and possesses an Amateur Radio license.

>Only one example is needed to prove the assertion. There exists a group of
>radio amateurs (broadcast band experimenters) such that they are not Ham (no
>amateur radio license).

Still need your "one example", Vipul. They are radio HOBBYISTS or amateur
BROADCASTERS. They are NOT "radio amateurs" regardless of how YOU rationalize
it.

>So "amateur radio" is not the same as "Ham radio".

Yes it is...One in the same... Absolutely NO difference.

>author
>then proposed "Morse code" as the solution for this. Morse code is operating
>an
>appliance - although with real-time <human> encoding/decoding.

In the Amateur Radio applicaiton, "appliance" refers to commercially designed and constructed radio equipment. I have several radios that do not meet that criteria. It has NOTHING to do with CB or Morse Code.

>You heard it here. K4YZ wants EVERYONE (not just radio amateurs) to learn
>Morse
>code.

And You ALSO heard it here (or at least where I said "is anyone else laughing as hard as I am) that it was sarcasm.

Sarcasm is hard to understand when you have a hard time understanding the language in which it is being used.

>We have more than enough spectrum to make our lives easier.

Perhaps at this exact second in time we do, but if you were ALSO paying attention to agendas outside of Amatuer Radio, spectrum allocations are hot topics, and reallocating them is a big business.

That's why the "Amateur Radio Spectrum Protection Act" is important for Amatuers to not only support, but promote.

>There is no great need of conservation.

(Is it really possible for ONE individual to be so ignorant of current events?)

>In fact, much of TV spectrum and even amateur radio
>spectrum is unused.

Yep. I guess it is.

>Learning Morse code would be an unneeded burden on
>everyone.

Why?

>>(is anyone else laughing as hard as I am...???)
>
>Yes, I am. That's really funny!

The problem is you ae laughing with the crowd with no understanding of WHY you are laughing...The "LAUGHTER" light came on and you reacted.

cheese
> sandwich"?

Check the forward of any dictionary. The correct definition of a term is what the majority of users mean by the term. Dictionaries document the language as used they do not limit the language. If everyone chose to call that sandwich a 2N2222 then that would become not only the term for the transistor but also a term for that sandwich.

Afterall if language were static, we wouldn't have a word for sandwich. It is named for the Earl of Sandwich, who didn't want to interrupt his card game and so told his cook to place some meat between a couple of slices of bread and give it to him. Thus was born the sandwich. But if terms could not take on new meanings, the word Sandwich would have remained limited to use to describe the Earl of Sanwich's domain.

Words can have more than one meaning. Context clarifies the selection of meaning. One can eat a mint or they can visit the mint. One understands from the way it is used that the word mint means a candy in the first part of the sentence but a place where coins are made in the second part of the sentence.

Even though language grows and develops, a single person cannot create his own definitions. No one will understand him. The definitions grow and shift but the usage of the general population not an individual's preference.

Languages grow, develop, and change. That is the way life is.

Dee D. Flint.

From Dee Flint, N8UZE:

>It's an inherent ability of the
>human brain to be able to handle information at the highest speed it is
>trained for and speeds SLOWER than that.

For some real-time encoding/decoding schemes, you <may> lose your ability to realtime encode/decode at a speed lower than a certain speed.

I know its hard to imagine. It seems counter-intuitive, but it does occur. I, myself have had that condition <on occasion>.

Pretty sorry attitude. Sounds like the only thing you'd be happy
to see is a government led by yourself...or by someone who
is 100% in sync with whatever your beliefs are. You don't want
a democracy if the majority doesn't agree with you...IMHO of course.

> > > The people of
> > > France and Germany have no more control over what their government

> generally be blamed for what their governments are doing.

That's true to a point...but the argument has
its limits. I was just following orders doesn't
cut it in the extremes of violence, brutality, etc.

> I certainly don't
> want to blamed for anything my government does, since I DIDN'T vote for
> them.

Has anyone blamed you for anything the USA has done?

> Nor do I want to be blamed when I think I'm voting for someone who'll
> actually represent the people and they turn around and act like every one
> else--doing what they please.

Sounds like a personal problem. Bottom line, you either participate
in government by voting or perhaps even running yourself...or you
just bitch about things you don't like.

Cheers,
Bill K2UNK

Going to Hanoi was unpatriotic in and of itself. Now IF she
was spying for us and that was later disclosed, then I'd
chnage my mind. In the same light, Sean Penn and others
that went to Iraq before the war started are equally
unpatriotic in my book.

> (She could have brought back valuable intelligence

Let's be serious here...I'm not talking about lunch counter
laws, back of the bus, etc. I'm talking about blocking
roads, access to buildings, etc.

> That said, it's hard to see how blocking traffic in San Francisco can
force the
> courts to test the legality of any war.

It's not testing the legality of a war...those that block roadways
should be arrested because they have NO right to violate
laws which, in so violating, the abridge the rights of others.

>>The term "amateur radio" is DEFINED that way.
>
>It seems too complicated for you.

Nope. I've known these terms for almost 40 years.

> I will try to be clearer. Try to follow.
>
>A radio amateur includes someone that experiments with radio circuits.

Only if that person holds a valid amateur radio license.
>
>It is legal to build circuits and transmit on the broadcast band.

Only under two conditions:

1) With a valid broadcast service license and approved equipment
2) Under some old Part 95 or Part 15 rules (I'm not exactly sure which) that permit extremely low-power unlicensed operation.

Neither is amateur radio.

>A person who
>builds a circuit and transmits on the broadcast band is a radio amateur.

Not unless they hold a valid amateur radio license. And the broadcast-band operation is not amateur radio.
>
>If that person does not have an amateur radio license, that person cannot be
>a Ham.

Without a valid amateur radio license, that person is not a radio amateur.
>
>Only one example is needed to prove the assertion.

You have not provided even one.

>There exists a group of
>radio amateurs (broadcast band experimenters) such that they are not Ham (no
>amateur radio license).

Incorrect. If they broadcast under the low-power rules, they are radio experimenters, not radio amateurs.
>
>So "amateur radio" is not the same as "Ham radio".

Incorrect. They are one and the same.

Human language is idiomatic. Word and phrase definitions are not always perfectly logical. A cathouse is not a house for cats.

>
> France, Germany and Russia with oil contracts and selling banned weopons
> to Saddam.

How are the oil contracts "back door" relationships? Those were not, as far as I know, ever secret. Iraq was permitted to sell a quantity of oil via the oil-for-food program. Somebody was going to get the contracts to do the work.

As for banned weapons sales, I'm aware of some reporting that Russia sold some weapons. I'm unaware of reporting about French and German weapons sales. Can you point me to it? (We're talking post-Gulf War, I assume. Prior to that, pretty much every arms-exporting country, including the US and Britain, sold nasty stuff to Iraq. In the US case, that included chemical and biological weapons.)

>> Oh, and if it's all about following money, who's going to benefit
>> monetarily from those rebuilding-Iraq contracts that are being offered
>> only to selected US companies?
>
> You tell me.

Bill, you cannot rationally argue that France/Germany/Russia opposed the war solely because they benefited from antebellum business relationships unless you also argue that the US favored the war because of expected postwar relationships. If you insist on following the money to France, Germany and Russia, you must also follow the money to the US unless you are completely bereft of objectivity.

> Would you not want those contracts to go
> to US companies?

I'd want those contracts to go to the lowest-price qualified bidder. It's mostly our money being spent, after all.

>> No, they've said they disagree with us. That's not the same thing.
>
> Jon, that is bunk. Many hate what we are...free, democratic and
> successful...and they don't care what we think

Bill, that is bunk. It's not our democracy and freedom they hate, it's that we are the torch bearers for what they see as centuries of Western repression. The Crusades are more than dusty history in the Muslim world, and they view Israel and US support for Israel as being more of the same. I think they're off-base there, but that's how they see it nonetheless. If the US were a despotic regime but still had exhibited the policies toward the Arab world of the past 50+ years, they would hate us just as much. If you don't understand that you simply haven't bothered to find out what they are thinking. The "they hate our freedom" argument is just foolish pandering.

Looks to me like most of the uniforms of the Army of Iraq found lying in the street are missing an inhabitant. And, coincidentally, there seem to be a lot of folks with military haircuts and a fresh set of civilian clothes wandering, unarmed, toward their homes. Pretty amazing stuff.

Interesting. I never gave much thought to how her actions may have damaged
the antiwar movement, but I see your point. So her behavior was not only
erroneous and unpatriotic but counterproductive to the end she desired.
That's about as lose-lose as you can get!

The problem is, the difference between 2 and 3 is hazy at best. While Hanoi Jane's behavior was clearly in the category of 3, there are many who believe that ANY overt protest of the war is "aggressive" and likely to be used by our enemies to bolster their position. Even among those more tolerant of public protest, there are probably many possible protest behaviors that would be viewed as 2 by large numbers of people and as 3 by other large numbers of people.

> counters and refused to give up bus seats.

I'm not sure I agree that intent is the principal issue. Seems to me that the effect of the behavior is more important. Blocking traffic in downtown SF is annoying but doesn't really inhibit the war effort. Blocking access to a military base would be a different case, even if the intent in both instances were the same.

(I remember reading that some antiwar group said prior to the start of the war in Iraq that they were going to attempt to illegally enter a base in California once the war started. I don't recall the name of the group or the base, and I never heard whether they did try or if so, what happened.)

> That said, it's hard to see how blocking traffic in San Francisco can
> force the courts to test the legality of any war.

Yeah, blocking traffic is not the best example, but I don't have a better one handy.

Of course, if the law in question is declared unconstitutional, no crime was committed and it's not a "4" case.

Not in your lifetime. Everytime US Forces are sent to do something,
the liberal media is ready to call it "another Vietnam." I heard it
said about Grenada, Kuwait, Somalia, Haiti, Rwanda, and the Former
Yugoslavia (FY for Dave).

Vietnam made some good faith gestures allowing us to search for and
recover some of the remains of service men KIA over there. I saw the
repatriation of some remains while on Guam. The Color Guard rolled
out to a C-141 Starlifter and brought them in. Katie Kuerk and
Jeraldo weren't there.

And no, I didn't get permission from my commander to be there.

Apparently, copying code slower than one's maximum speed acts as a
depressant and put the operator into a state of unconsciousness. At
least that's what several Extra codesters here have claimed. Which
lays to rest the old Morse Tales of benevolent Extras cruising the
Novice subbands and handing out contacts, unless they are able to do
so while asleep.

2M is not personal cell phone communications. It can be legally
monitored in America. License not required.

Jon:

I have been reading the thread. If NON-despotic governments and their
peoples don't have the stomach to get rid of a brutal tyrant like SH, then
I most certainly DO NOT care what they think. The salvation of my own
soul depends on my definitely NOT tolerating a regime that brutally
tortures, rapes, and murders it's subjects, merely for me to gain whatever
political advantage I can by doing so. Fortunately, we now have a
President who is thinking along those lines, and has the moral courage
to put an end to the barbarism of the Saddam Hussein regime.

Wires. Len's a big landline man. But you drift. We're talking about
the absence of the new Techs on 2m, not of Len's internet activity.

I don't believe that Len is monitoring 2m. I'm sure he isn't doing it
around Pittsburgh, Columbus or Cincinnati.

You're right. I am free to choose. I have chosen. You still jumped to
an incorrect conclusion.

All you really need to know is that someone whose maximum morse speed is
only five words per minute is not proficient (skilled, expert) in the
use of morse.

Are you perhaps the only soul here not familiar with the Monty Python
routine? You'd appear less silly if you'd check it out.

Hey folks,

I get an email from WD4IHS with an AOL account about a
QSO I had on 20M. Well, based upon his comments,
it seems that he didn't like what I said on the air, so he replies with a
tirade
via email from his AOL account. Well, I think, I wonder why he
didn't reply to me on the air? So I reply to him via email to his
AOL account. Then, this COWARD has my email rejected by
AOL, I guess he doesn't want to hear what I said to him. Well, below is
the entire exchange. It is here now for all the world to see..
I guess Jeffy will have to deal with this...let's see AOL block this
out...If any of you know this clown, show him this.

73,
Chuck K1KW..

MY REPLY IS BELOW:

Hey,

Chill out...

If you listened you would have seen that the group agreed that the VE7 had
a wide
signal and they were working with him on it.

So...what's your beef?

AND...Why didn't you break in? Do you have a call that you would be
proud of, or even be heard? Did you listen for the rest of the interchange
or just fire from the hip....?

BTW, what were you drinking? Before you send such a missive again,
get your wife or significant other to OK it...because you are obviously
out of control, based upon that totally maundering email you sent to
me......

73,
Chuck...K1KW

Hey Chuck,
My name is Jeff and I was listening on 20 meters a few minutes ago
and I noticed those gentleman were having a nice conversation.You could
have told them they were splattering and then moved on,but,you had to keep
on
and on about it.You say you have been a ham since 63 or whenever but
I thought you would have learned some manners by now.First of all,I live in
Brentwood,Tennessee and you were wider than they were just talking normal.
You have entirely too much background noise and you are over driving your
amp
and/or your mic. gain is too high.I realize that some people HAVE to run
a KW for whatever reason but sometimes they are not necessary...DAH.YOU
were causing much more interference than any of those other guys were at
all.
You need to look at your own signal and back your mic gain down some and
QUIT over driving your amp.I got my ticket in 77(big deal).Was it necessary
to screw up there QSO like that?You might ought to stay off the rig when you
have been drinking huh?Oh well,some constructive critisism might go along
way
here! Like,MIND YOUR OWN BUSINESS and worry about yourself.I can not stand
people who police the bands and try to tell people what to do.He who knows
it
all,knows NOTHING.Think before you ruin somebodys QSO next time.

73's,Jeff.

I have no idea how we'll handle it. But, I do know this is an entirely different situation. For one thing, we had the Soviet Union to contend with after that war. And, for that, we needed a stable Europe to base troops, equipment, and weapons. That doesn't exist today in the Middle East (we can stage war with only lukewarm allies in the area). As a result, needs other than defense will play a larger role in this situation. What effect that has is yet to be seen.

And about when did we first get involved in Vietnam? Sometime in the late 40's or early 50's? That means the government had about 17 years to do what it wanted to do before the first "flower children crawled out from under their rocks," as you put it. Wasn't 17 years long enough to handle a tiny country like Vietnam? If not, they had another six years or so after that. It was time to get our troops out of there.

I think you get my point very well. The press, government, and military, are describing those as Saddam's forces, Saddam's soldiers, Saddam's Army, Saddam's Republican Guard, and so on, when they are in fact nothing more than Iraq's military - man and women who became soldiers for the same reasons soldiers all over the world do. They have no more say in their government than soldiers elsewhere do (even less if you believe they were as oppressed as claimed) and their motives are no less honorable then the soldiers elsewhere. Yet we are killing them in the most massive and effective manner possible, which is sad (not something to shout for joy over). Our soldiers are dying there. Again, not something to shout for joy over.

The war dead are always forgotten, perhaps more by those supporting war than by those opposed. Other than the families, most today cannot even name a single person who died in the Kosovo, the last Iraq war, Panama, Granada, or Vietnam. They are forgotten. Their families are forgotten. The best we can do is have a national holiday to remember that some people died in war. Heck, even our disabled veterans are largely ignored and discarded.

> (snip) I never said it wasn't. The fact
> still remains that the coalition executed
> the most precise offensives ever accomplished
> with minimal civilian losses. (snip)

How do you know that, Bill? You don't have any knowledge of that personally. We don't know how many civilians or others are being killed - the military has never even gave an estimate of Iraqi casualties from the first Iraq war. The MOAB has been delivered to Iraq - not exactly a weapon intended to prevent collateral damage. Where do they intend to use it, especially with most of the remaining Iraqi troops isolated in towns? What other massive ordinance has been used? And where?

> WHAT? This war has been covered by the press

Effective WMD use requires independent deployment and launch authority
when Command & Control is lost. It is believed such practice exists in
virtually all nations with WMD.

A fascinating read, Phil. I learned more about the Jewish people in that one message than I've learned in the books I've read. Books do fine at covering places and issues, but not so well at covering the way people feel and think. And, of course, I'm always much more interested in the latter. Thanks for taking the time to respond. I've love to go into more (in fact, I'd love to sit and talk with you for four or five hours), but this thread is getting way out there as it is. So perhaps we should let it go with that. Thanks again.

I didn't duck anything, Brian. You asked me for evidence which indicated what we "would" do, which is obviously impossible to provide. I can't now provide evidence of the future. Instead of that, we should be talking about the next step.

The above was not posted by me. Notice the source path of that message does not match my normal messages. It was posted by a CB'er who is convinced I'm someone else - someone from the CB newsgroup he doesn't like. I've told him many times that I'm not that person, but he simply will not listen. Instead, he is now posting messages with my name added (some with even my routine signature below). Please be wary of all messages with content that is out of my normal character in this newsgroup.

Alien time-dependent programming.

Actually its called motor memory. That's when you can encode fairly fast, but go lower than a certain speed and you are unable to encode at that speed.

If you look in the dictionary, the definition of the word amateur is: one who cultivates any study from without pursuing it professionally or with a view to a gain.

This could apply to our broadcast band circuit builder.

The definition of amateur says nothing about passing a test. Once you take this belief, it would be impossible to convince you otherwise.

That's the general definition. In regards to radio, the term "radio amateur" means someone with a valid amateur radio license.
>
>This could apply to our broadcast band circuit builder.

No, it cannot.
>
>The definition of amateur says nothing about passing a test.

Look up the terms for "professional" and "engineer". They say nothing about tests, either. But a "professional engineer" is someone licensed by the state to practice certain types of engineering. The abbreviation "P.E." refers to such a professional engineer. Referring to anyone who does not have the appropriate license as a "professional engineer" can get you into trouble. Claiming to be a "professional engineer" without the license can constitute fraud.

Human languages are idiomatic. Learn to live with it. A cat house is not a house for cats.

From N2EY:

>>So "amateur radio" is not the same as "Ham radio".
>
>Incorrect. They are one and the same.

Amateur radio is the license. Ham radio is the culture, traditions, set of beliefs.

Some Hams use the word "true" Ham. There would be no need for "true" Hams if everyone that had an amateur radio license is a Ham. There would be no "infidel" no coders.

A "true" Ham stays true to the traditions and belief of HAM radio.

"Usually, the spread of HAM radio, say the entusiasts, is more through word of mouth and passes on from one member of a family to the other. At times from one good friend to another. This anyway makes the hobby prone to be called a cult."

Actually, if you read back over my message, you'll see nothing was said about potential advisories. Instead, what I said was that we don't need strong allies in the Middle East to position forward bases today - "we can stage war with only lukewarm allies in the area." We're doing it right now, with allies that can only be considered lukewarm.

> From what I have seen so far, the difference

Dictionaries often do not contain the usage definitions of terms used by specialized groups of people. As I said in my other replies, the people involved in radio limit the use of the term radio amateur to those licensed in the Amateur Radio Service not to unlicensed experimenters or circuit builders.

The person who builds circuits for a hobby is not a radio amateur. He is an amateur circuit builder. That the circuits may be for a radio is irrelevant.

Why not? Because Morse isn't even a part of "normal activities" for
professional communicators. In ONE GENERATION you could throw back
throughput by many magnitudes and increase the need for
electromagnetic spectrum by at LEAST 90%. Imagine having HDTV
transmitted at screaming 40wpm. People wouldn't buy it. People quit
buying Morse in by the 60's, so why this retro idea now?

It takes the President to call the cops?

That's a large and likely incorrect "perhaps".

> Other than the families, most today cannot even name
> a single person who died in the Kosovo, the last Iraq war, Panama, Granada,
> or Vietnam. They are forgotten. Their families are forgotten.

All the dead except those who are famous are forgotten. Who will
remember you or me after two generations? Do you remember my
great-grandmother? Do you think that I remember your late Uncle?

> The best we
> can do is have a national holiday to remember that some people died in war.

What would you suggest as a substitute for such a holiday, Dwight?

> Heck, even our disabled veterans are largely ignored and discarded.

What are you offering as proof for such a statement?

I have plenty of familiarity with its grandpappy, the Daisy Cutter and
tell you exactly when such a weapon woud be used. The U.S. has not
employed the MOAB in Iraq. The only scenario in which it would be used
is out in open terrain if large numbers of Iraqi soldiers massed. That
is not likely to happen.

That raises a number of questions. Since you feel the US should eliminate by force any despotic regime that it can eliminate by force, I wonder if you think the US should first attempt to eliminate such despotic regimes without force? If so, do you feel that the US should attempt to elicit allies in these efforts? If so, do you think the US should dictate to those potential allies the specifics of the efforts to be made, ignoring any potential ally that doesn't agree in every particular with the US view?

Are you telling us that no pattern of predictable behavior by the USG
toward defeated enemies can be seen from our past actions?

> Instead of that, we should be talking about
> the next step.

Why, Dwight, that would be providing an answer about what we're likely
to do in the future *grin*. You and I aren't likely to participate in
making decisions about the next step so such talk would be a waste of
time.

Hey, Dick? Simple questions. What do *you* think will happen now that Iraq
has been liberated of Saddam Hussein? And, in what way do *you* think
anything about 9/11/01 has been vindicated? In what way do *you* think any
impact at all has been made on any of the above?

Bullshit, Bill, and that's a copout of a response. My opinion of politicians is a popular one among citizens, especially over the past few years. But, it doesn't sound like you can even approach discussing a subject such as this without some kind of innuendo or insults, so I'll just end it at that.

Maybe you've such a high opinion of yourself you can't get past your own reflection.

I came in late to a media frenzy on Rumsfeld this morning. Something about he hoped Syria would not be a haven for war criminals and terrorists. So, let's see...Syria may be next like Dan said. Then, oh...let's see, probably Iran; next, Libya; next... [not in reference to the Iraq war being another Viet Nam (I think those kind of comments are crap), but more in reference to the US now becoming and remaining an aggressor on nation after nation.

Those who promote this "true" ham nonsense are not endorsed by the amateur radio (i.e. ham radio) community as a whole. There is no "ham radio cult" as you try to imply.

The "infidel" no coder thread was satire (i.e. a particular form of humor) and not intended (at least initially) to be taken seriously.

Dick, it fascinates me how people like you think. They first determine prejudicially which "side" is correct. They then accept uncritically any evidence or argument that seems to support that prejudicial conclusion while dismissing any evidence or argument that appears to contradict it. Since they can't acknowlege that any evidence or argument which contradicts their point of view has any shred of validity, they resort to attacking the motives or intelligence of those presenting the argument -- or by making vague statements about their being poorly informed. (In fact, by refusing to consider the body of information that makes them uncomfortable, it is they who end up poorly informed.)

This approach is comforting because it allows one to divide the world into "us" and "them." Or, as the President says, you're either with us or you're against us. And those who adopt this mode of thinking in fact ARE living in a bipolar world, because by accepting only one side of the argument they do divide into two camps that can happily lob verbal hand grenades at one another, feeling, no doubt, mighty righteous all the while. This wouldn't be so bothersome except that this approach is more and more the way most public debate takes place in the US. It's not particularly healthy for democratic decision making.

Of course, there are some of us who are more open minded. We recognize that there are generally elements of justice on both sides of an argument. This really irritates the bipolar types, who respond by calling us wishy-washy, wusses or fence-sitters. Trapped as they are in a world where EVERYTHING comes down to a good-versus-evil debate, they can't stand being unable to pigeonhole everyone.

You aren't the only "personnel officer" in here. There's another, one of the Gang of Four...he drives a bus now.

Want to argue "English composition" with me, Dee? I've been a published author since 1968...national publications, involving electronics and radio. That was before I got my degree. I was selling words after that.

Oh, and I've been doing the in-department second interviews of young EEs applying for engineering positions since 1972.

Just thought I'd mention that. :-)

That is biased, incorrect, a mistake, an error. It is spin,
propaganda, self-interest, and a lot of not too good
attributes.

Jimmie, Jimmie...tsk, tsk, tsk. You HAVE to be the
antagonistic supporter of morse, don't you?

You try to mirror my own paragraphs to "prove" something.

You don't prove anything other than you are a biased
morse fanatic. Give it a rest.

>>>>>However the fact can then be used
>>>>>to support advocating Morse.
>>>
>>>Is that a bad thing?
>>
>> For licensing in US amateur radio it is considered "bad" by many.
>
>Advocating the USE of Morse is bad?

When there are better modes, more useful modes, YES.

If you want to maintain an Ancient Radiotelegraphy
Society in perpetuity, then NO.

The subject sub-thread was LICENSING. Look up above in
the quote: "For licensing..." LICENSING, not "use."

Hello...? LICENSING involves TESTING. Capice?

>Who considers it bad besides you and Vipul?

Everyone who isn't a morse code fanatic.

The other radio services have given up on morse code for
anything of use in communications.

>> So much so, they've not bothered to get into US amateur radio.
>
>Who are these "many" who have allegedly been turned away?

The ones you dislike.

Reverend Jimmie ought to understand that there are NO polls
done by any ARRL to show such "facts."

You are in denial, Jimmie.

>> That is biased, incorrect, a mistake, an error.
>
>Yes, you and Vipul make many such errors. Try to fix them.

Tsk, tsk, tsk. Getting angry are you?

Try to practice some tolerance...you would get such returned.

You are being spiteful. Not good.

>Glad to see you're finally recognizing your mistakes ;-)

Not mistakes, Jimmie.

You must learn to contain yourself...besides putting yourself
in that mean-spirited box. Learn tolerance. It's very Jesuit.

>> There is a dearth of business information in regards to the
>> "growth" of morse code use.
>
>Vibroplex is still in business, MFJ is in business, Ten-Tec, lots of other
>companies.

Then by all means, promote them. Business trades don't.

Remember that I was the one who pointed out your ERROR
about amazon.com allegedly not being profitable.

You are about as reliable on business matters as the
National Enquirer.

>I wouldn't take business advice from somebody who confuses "bankrupt" with
>"unprofitable", though.

Tsk, tsk, tsk...poor baby, still stung over the correction about
amazon.com. Amazon has had over a half year of dividend
earnings. Mid-way through that period you insisted they were
"losing money!"

Now you want to engage in wordplay to misdirect the subject.

You MADE A MISTAKE before. Admit it. Show some machismo.

>For sending Morse code I have a selection of four Vibroplex bugs, a J-37
>straight key, and a new Mini-Paddle (thanks to the generous ham who gave me
>the latter).

Enjoy. You will be the last bastion of beeping. Beep away.

>If a thing has a use, it is useful. I used Morse code to communicate with
three
>different hams last night on the 40 meter band. Great QSOs.

Call the staff at "60 Minutes." Have them cover the event!

Show the world that the Ancient Radiotelegraphy Society is
showing them the best, most useful way to communicate.

>Of course Morse code is not useful to someone who doesn't know how to use it,
>just as a book is not useful to someone who cannot read (except perhaps as
>fuel or to prop up wobbly furniture).

It's propping up the old men of ARRL. Very useful for that.

>> Of all the US radio services that
>> existed since the end of WW2, only two retain morse code
>> modes for any sort of communications purpose.
>
>So what?

So, did you just leave the shtetl last week?

EVERYONE ELSE in the world of radio has either dropped
morsemanship or never considered it for use in the beginning.

Morse code is dying off in radio. It is on life-support only
in amateur radio. AMATEURS.

Ancient Radiotelegraphy Society. Beepers.

>And the other is...amateur radio! And this is...an amateur radio newsgroup!
>And we're discussing whether Morse code is useful...in amateur radio!

There's a LOT more bandwidth wasted on two other threads
discussing war and world affairs relative to war...done mostly
by AMATEURS in an AMATEUR RADIO NEWSGROUP.

Hello? Are you so schizoid you compartmentalize everything?

Jimmie, morse code is useful only to morse fanatics. Morse
fanatics are those who can't envision themselves using any
mode but on-off keying.

>How about that, Captain Obvious? ;-) ;-) ;-)

Kiss my yes, Reverend Jimmie.

>Since Morse code IS used in amateur radio, it IS useful to amateur radio
>operators.

NOT to ALL of them. You've lost your perspective. In fact, it
retreated to the vanishing point.

>Why does that bother you so much?

It doesn't. The morse code TEST is really the subject.

You keep on, keep on, keep on misdirecting into "use" to get
away from the morse code TEST.

>> Morse code mode is slow and error-prone in requiring humans
>> at each end to be the encoder and decoder.
>
>Guess people shouldn't talk to each other then, huh? Humans at each end,
>encoding, decoding, making mistakes....

That's exactly why the commercial communications carriers did
away with manual telegraphy, Jimmie.

You are very slow but we can all see some light at the end of
your fanatic tunnel.

>> Maximum

>
>The *best* skilled ops do at least twice 30 WPM. I can do 40-45 wpm on a good
>day. Effective throughput is much higher due to the use of abbreviations,
>prosigns, Q signals, etc.

Sustain that "throughput" for as long as paper is available.

Teleprinters of 60 years ago could do better than that (60 WPM)
as long as the paper lasted and was reloaded. Nice printed
copy, easily legible, same copy at both ends. No bathroom
breaks, no need to sleep or eat. Not distracted by other humans.

>> The slowest teleprinters in radio
>> communications have been 100 WPM for four decades,

>
>Lots of 60 wpm teletype in use, though not as much as before. I was using 60
>wpm machines on the air in the mid-70s. Less than four decades ago.

Yes, your "surplus" variety, teleprinters that were getting old
when I was in the US military in the 1950s. Phased out in
favor of the Model 28s and 33s that came in at the end of the
1960s. Those models were in industry at the end of the 1960s
and used as distant computer terminals.

I'm sure you would have used spark transmitters too if they
weren't outlawed.

>> do so 24/7 with enough paper to reload, don't need food,
>> don't need breaks, don't need to go to the bathroom. Data
>> rates can go to 200+ WPM equivalent and use forward-
>> error correction codings to improve reliability through
>> interference.
>
>Sure. Very useful. Just like Morse code. Hams use all sorts of modes, Len.

I've already used far more modes than in permissible to US radio
amateurs. Not a single manual test for them in US amateur radio.

The only manual test for any mode in US amateur radio is morse
code. TEST, Jimmie. NOT "use." Only for privileges below
30 MHz.

>> Every OTHER US radio service gets along quite fine without
>> using morse or ever envisioning its use.
>
>So? Their needs, goals and resources are different.

No kidding! [see, you can learn to understand the other world
of radio!]

Those in the Archaic Radiotelegraphy Society have NO use for
any other mode but on-off keying morse codes.

>What is wrong with live and let live?

Why do you ask? You sure as hell don't practice it!

>On the other hand, no code skill has been required for an amateur radio
>license
>giving all privileges above 30 MHz. Been that way for over 12 years. Lots of
>real, genuine, first-class, fine-and-upstanding hams hold that class of
>license. All part of the big happy family we call amateur radio.

Yes, I've seen the "big happy family." Class distinction deeply
rooted. Elitism, fractioned opinions. Olde-tyme thinking hams
acting like puerile bigots to everything not in the standards and
practices of the 1930s.

Jimmie, ARRL can't get more than a quarter of all US amateur
radio licensees as members. Been that way for years.

>Besides, we're talking about Morse code USE, not the TEST. The test is all
>but gone.

The TEST is NOT gone. You act like you are gone.

You keep misdirecting from TEST to "use." You don't have a valid reason for retaining the TEST except for ITU-R S25.5.

Remember, LICENSING involves TEST, not "use." Can't "use" until the TEST is passed. Capice?

>But the USE will continue for a long, long time. Live with it.

So is reenactments of the Revolutionary War and Civil War in the USA. Still done. Stagecoaches are still around as a mode of transportation but other than amusement park rides, they aren't carriers in transportation. Muskets still exist but they aren't effective firearms compared to modern weaponry...although the myths about their "effectiveness" continue.

Spark has been outlawed in the USA for years. It needed on-off keying to carry communications information. No other mode could be made to work with spark. I'm sure the Archaic Radiotelegraphy Society would keep on using spark till the end of their lifespan.

Once the FCC decides to eliminate the US amateur radio code test, it will be GONE, Jimmie. Kaput. Defunct. Tossed out. Live with THAT. It will become fact.

Some museum artifacts will still be sitting around vibrating their plexes and slapping bugs. In old, quavering voices they will sound off about their "prowess" in manual telegraphy by almost getting as fast as the teleprinters of WW2. It will be a quaint sight. A living museum of long-ago radio.

Enjoy your glass case in the museum. Beep, beep, OM.

On-off keying morse code mode is the second-highest mode
used according to a poll by ARRL. It was second to VOICE
on HF some years ago.

Above 30 MHz, amateur radio use of on-off keying morse code
is in a definite minority, useful only for some specialized
activities. Has so little use up there that only morse fanatics
have to try to maximize a minimum. Tsk, tsk, tsk.

You must "atest" to those two facts, for they ARE facts.

[Jimmie, step away from the pulpit...it's Sunday and let the
real pros preach, okay?]

All the readers are "getting the point" even if you are "saing" words.

All you are doing so far is some childish STALKING of someone
you believe you can bully. Poor baby.

Steamy can't WRITE in a conversational tone. He BARKS ORDERS,
still thinking his stripes are on in a different "service."

Steamy ought to address his opponents with the salutation MAGGOT
in the worst tradition of the USMC.

Temper fry.

Ignorant slut. Tsk, tsk, tsk. The "Nairobi Trio" were a staple visual schtick of the late Ernie Kovacs on television.

Three humans in ape suits, one playing a piano, one on bongos, one ready for the literal visual "punch line." Same music each time. Simple, wonderful humor.

Kovac's "Nairobi Trio" began slightly before 1956 on NBC television. Steam was still wetting his diapers then, crying his little eyes out. Come to think of it, he is still doing that.

Auctioneers are engaged in a business. US amateur radio is
NOT for pecuniary interest.

Music is a no-no on US amateur radio since it is too much like
broadcasting.

Teleprinting is a go-go on US amateur radio. An old Model 15
surplus Teletype terminal can sustain 60 WPM output for an
hour or more until it runs out of paper...and it would be at least
50 years old. A newer (surplus) Model 28 can sustain 100 WPM
as long as it has paper (they take fan-fold).

There's very little problem of most humans, untrained since
childhood school days to read legible type at least 200 WPM
equivalent. I can do roughly 1000 WPM read-only and it's been
a long time since my childhood. :-)

US amateur radio regulations classify teleprinting in the general
"data" category.

> from the same neglect once we're on to the next adventure.

Humanitarian aid and reconstruction funding for both Afghanistan and
Iraq are line items in the off-the-budget $80 billion war funding
package passed by congress on Saturday, $2.5 billion of it earmarked
for aid and the reconstruction of Iraq alone. Even before the fighting
has stopped. And that's just first pass emergency funding.

Conjurs up visions of some backwater entity calling Rumsfeld and
hollering "Invade us, invade us!"

The Japs pledged $200 million for Afghanistan, last I saw they'd
forked over only $32 million so far.

> > This really cooks it for me. In other words they don't give a rat's

>
> No question that they are concerned about control. So are we!

The difference is that it was US (U.S., U.K., Aussies) who sent people
in to die for the sake of the Iraquis and global security while Putin,
Shroeder & Chiraq Inc. did everything they could to stymie our effort.
In other words we earned the right to call the shots with blood. Twice
over as far as I'm concerned. When was the last time any of 'em

cleared out a despotic regime and worked to establish a democracy in it's place?

The control thing has much deeper roots, it's about the ongoing effort to homogenize the U.S. into some fuzzy "one world" template. Ref: Marx. 'Nother whole discussion but it ain't gonna happen, we are not gonna get pulled down to the level of the proponents of that vision or fall under their control. This one even gets down to raw, primeval jealousy and egos.

> >> Do you

You're taking the discussion into the realm of what-ifs. Works for antenna optimization analyses, does not work when using crystal ball outputs as they relate to geopolitics. I pass.

> There is little evidence that Saddam was directly supporting OBL and
> crowd, and certainly not with WMD.

Premature conclusions. Doesn't really matter anyway at this point, the deed is done. Tomorrow is all that matters, we can catch up with the rest in the history books.

> Saddam was a slug and deserved to be
> squashed. But it's unclear that doing so will help win the war on
> terrorism.

Don't put that in the bank, events are moving at lightning speed as we peck at our keyboards. One of our major conservative Iranian arch-enemy politicians is now suddenly and publicly "suggesting" dialoge with the U.S. North Korea just all but completely reversed it's stand on it's "terms" for talks abt that flashpoint. There's the other two members of the "Evil Axis" obviously just a tad, shall we say "concerned" after our romp thru Iraq.

All of it within the past two days. Sharon is also reversing course and is completely uncharacteristically tossing olive branches at the Palestinians. Some "message traffic" is definitely being transmitted and read . .

This thing is ballooning. Comes as a bit of a jolt to me quite frankly.

> > Are you kidding? The millions who have opposed our invasion of Iraq
> > without a UN mandate, a permission slip from the UN to take out Saddam.
> > If that ain't an attempt to tell us what we can and cannot do I don't

>
> There's a difference between requiring permission and wanting to achieve
> consensus.

The whole stink has centered on the lack of a Security Council resolution. Any of the members who have veto rights can torpedo any resolution if they choose to do so. Two comments in this regard: (1) Tote up the total number of vetos the U.S. has dropped on a proposed resolution vs. the number of vetos the rest of those members have exercised going back to the inception of the UN. (2) Hell will freeze tight before we bow to a veto by the Red Chinese.

Which in concept is exactly what we did.

Looks to me like Putin, Shroeder & Chiraq Inc. have wound up marginalizing both themselves and the UN certainly in the eyes of one helluva lotta U.S. citizens and no doubt beyond.

> If your characterization were correct, those millions would

As I said in my other replies, the people >involved in radio limit the use of the term radio amateur to those licensed >in the Amateur Radio Service not to unlicensed experimenters or circuit >builders.

Dee, I've been "involved in radio" for about 53 years. I take exception to what you've said.

Very little "experimentation" in radio (or electronics) requires any license. Only the TRANSMISSION of RF energy beyond a regulated specific value requires a federal license.

>The person who builds circuits for a hobby is not a radio amateur. He is an >amateur circuit builder. That the circuits may be for a radio is >irrelevant.

I'm a professional "circuit builder" (actually a designer and builder). I design and build "circuits" for my own use but I'm not an "amateur" at it. That includes radio applications, irrelevant though you may think it is.

Quit calling cheese sandwiches by registered EIA part numbers. Nobody else (except a few truly ignorant amateurs in here) had done that since the 2N2222 debuted about 4 decades ago.

>I agree! It's particularly important in engineering applications because
>miscommunication can have serious consequences to life and property.

Yes. Walk around work calling cheese sandwiches "2N2222"
and your manager will fire you. No income and you will fail to
pay your mortgage and lose your property. In going over the
bend you may hurt others, threatening their life. Serious.

Jimmie, a cheese sandwich IS a cheese sandwich. It is NOT
a transistor.

Write that on the whiteboard 100 times and try to believe it.

Your attitude is why so few are interested (not "intetrested")
in antique radio.

Careful on your typing lest everyone starts calling you
"k4yz" or "wa8ulx." :-)

>>What if others call a cheese sandwich a 2N2222, and I say "no that's a
>>cheese sandwich"?
>
>If everyone else calls it a 2N2222, then you're wrong to call it a cheese
>sandwich.

If you start calling cheese sandwiches by EIA transistor part
numbers, you've gone over the edge, flipped out, and should
have your dusty old sheepskin recycled as a dashboard
cover!

Holy snit, Batman...US amateur radio is now represented by
some ignorant sluts who can't understand basic semiconductors!

>But the fact is that everyone else calls it a 2N2222 a transistor and you are
>calling it a cheese sandwich.

Tsk, tsk, tsk, "everyone else" is NOT calling it a "2N2222."

K4YZ thinks so. [he's an ignorant slut anyway]

DO try to stay with the program. Do NOT go to the same therapist
as some of these so-called "amateur extras" do.

Remember, Jim Fixx is watching over you... :-)

>
> English Composition is a sure bet to not be on the list.

HOW would you know? You've never demonstrated that in here except a lot of shouting and hollering and order-giving.

>>No, thats society's problem. Unclear (or even dishonest) definitions badly
>>affect those involved.
>
> Sorry Vippy...YOU are the one with the perception problem here. It's
>YOUR place to fix it. Sorry you don't agree.

Lots of readers observe that Steamy Stalker has not only a perception problem but a bully complex with a side-order of fried ignorance.

>>What if others call a cheese sandwich a 2N2222, and I say "no that's a cheese
>>sandwich"?
>
> Then you've still got a problem. If everyone ELSE calls it a 2N2222,
then
>YOU had better call it one too if you expect to eat.

HOW would you know the difference between a 2N2222 and, say, a 2N5764? Steamy, you wouldn't know the difference between a 2N3904 and 2N3906 (or a 2N2222) if you choked on it. Those three have become much-used transistors used over the last 30 years and are still used.

In your short "career" as a purchasing agent, did you order any transistor numbers for lunch? Why not? :-)

>>It seems too complicated for you. I will try to be clearer. Try to follow.
>
> WE understand fine. That you want to call a spade a carrot, is fine, but
>it's still a spade and you're wrong. Sorry.

Tsk, tsk, tsk, you are rambling again. You should have used the
word "shovel" instead of "spade" since you keep shoveling all that
snit more than anyone else in here.

Try to get with the program and learn some basic semiconductor
electronics. Try the new book "Transistors for Dummies" subtitled
"and for Steve."

You could also get a specialty cookbook all about sandwiches and
quote where some of them are allegedly called by EIA transistor
part numbers.

[one ignorant slut for an "amateur extra." "extra" what?!?]

> No...A person who builds a circuit and transmits on the broadcast band is
>either an amateur BROADCASTER, or a radio HOBBYIST.

Ignorant slut. No "building" any circuits is required. Just like
the majority in US amateur radio, "amateur broadcasters" use
ready-built equipment.

> A Radio Amateur is a person who has taken the Amateur Radio
>examination(s) and possesses an Amateur Radio license.

And, in some sad cases doesn't know transistor part numbers
from cheese sandwiches...like yourself.

[no wonder that purchasing agent job didn't last long...]

> Still need your "one example", Vipul. They are radio HOBBYISTS or
amateur
>BROADCASTERS. They are NOT "radio amateurs" regardless of how YOU
>rationalize it.

What WILL Steamy Stalker do for an encore?

Call a beef roast an "FT-101?"

Call pressed duck an "ARC-5?" :-)

>>So "amateur radio" is not the same as "Ham radio".
>
> Yes it is...One in the same... Absolutely NO difference.

I'm going to call you "WA8ULX." Makes about as much
sense as anything you've written in here so far.

Oh, my, the "definitions" in here become as fuzzy as the
old sandwiches in the back of morsemen's refrigerators. :-)

Dee, if you insist on making ridiculous definitions ("if everyone
chose to call that sandwich a 2N2222") then I'd say you were
seriously deficient in basic electronics and are close to failure
of keeping that radio-electronics-based hobby license grant.

>Afterall if language were static, we wouldn't have a word for sandwich.

If language was static WE WOULD NOT HAVE LANGUAGES.

Period. Review basic etymology if you have a need of calling
cheese sandwiches a 2N2222 (or 2N3904 or 2N3906, whatever).

>It
>is named for the Earl of Sandwich, who didn't want to interrupt his card
>game and so told his cook to place some meat between a couple of slices of
>bread and give it to him. Thus was born the sandwich. But if terms could
>not take on new meanings, the word Sandwich would have remained limited to

>use to describe the Earl of Sanwich's domain.

If all languages were static, morse code abbreviations would all
be QRN. :-)

>Words can have more than one meaning. Context clarifies the selection of
>meaning. One can eat a mint or they can visit the mint. One understands
>from the way it is used that the word mint means a candy in the first part
>of the sentence but a place where coins are made in the second part of the
>sentence.

"Amateur radio is a SERVICE!" :-)

The word "service" throughout Title 47 CFR is a regulatory term
denoting a type and kind of radio activity under regulation.

>Even though language grows and develops, a single person cannot create his
>own definitions. No one will understand him. The definitions grow and
>shift but the usage of the general population not an individual's
>preference.

Except in US amateur radio among the olde-tyme hammes who
insist on making the standards and practices of the 1930s forever
inflexible, static, unchanging, and the ONLY jargon permitted to
be used. :-)

>Languages grow, develop, and change. That is the way life is.

Except in US amateur radio...etc., etc., etc. :-)

Let's hope it's well spent. It's not just about the amount of dollars. Some of the resources going into Afghanistan have been spent in ways that are questionable, supporting regional warlords at the expense of the central government. While it's understandable to try to get the warloads to help us chase down OBL and crew, one wonders what the longer term ramifications will be if the government in Kabul remains too weak to assert sovereignty over the whole country.

Fortunately, Iraq is not Afghanistan. I think it will be easier to put dollars to work to good effect there.

> Conjurs up visions of some backwater entity calling Rumsfeld and
> hollering "Invade us, invade us!"

"The Mouse that Roared" -- funny, funny book and movie.

> The Japs pledged $200 million for Afghanistan, last I saw they'd forked
> over only $32 million so far.

If I'm not mistaken, the pledged amount was to be provided over a 5-year period. If you have more details, I'd be interestsd in them.

> out a despotic regime and worked to establish a democracy in it's place?

NATO did just that in the Balkans a few years ago. In Gulf War I, the French had forces involved. Maybe the Germans, too, I don't remember for sure. The French even took a few casualties. (Funny, you don't hear much about that these days.) There are German forces working alongside US forces in Afghanistan right now. (Another thing you probably won't see on Fox.) French forces are also involved right now in trying to stabilize a

highly volatile situation in the Ivory Coast. And they recently deployed troops to the Central African Republic to protect foreign nationals there.

> The control thing has much deeper roots, it's about the ongoing effort
> to homogenize the U.S. into some fuzzy "one world" template.

The concern that much of the world has is that when there is one power that is overwhelmingly superior militarily, the rest of the world is at the mercy of that power. That scares them. Now, most Americans react to that with disbelief. After all, we're the good guys, aren't we? We'd never use our military power to force others to do things just to serve our interests, right? Except that we HAVE done just that in the past. Consider the Mexican War. The Spanish-American War. The Panama Canal. Invasion of the Dominican Republic (multiple times). During the cold war, there was a power balance, and to most of the world there was one side that was clearly preferable -- the US. But now that there is but one superpower, what prevents us from doing whatever the hell we want? (Some of that superpower's citizens have been arguing on this forum that we should do exactly that.) Not only with regard to perceived threats to our safety, but also with perceived threats to our econonic interests. It's not exactly unknown to use military power to advance economic interests, you know. (See: Honduras and the United Fruit company.)

Taking all that into account, it's clear that what France, Germany and Russia are trying to do is to form a bloc that will oppose what they view as some of the more dangerous behaviors of the US. That doesn't mean that they will oppose the US in all things or even most things. But I think they believe that the more the US uses its military, the easier it will be for it to resort to military action instead of exhausting peaceful means. When all you have is a hammer....

> This one even gets down to raw, primeval jealousy and egos.

On both sides?

> romp thru Iraq.

Don't put any of that in the bank, either. Almost everyone outside the US is "concerned."

I object to terms like "romp" to describe the Iraq war. There are 115 (last I looked) American families that haven't found it to be a romp at all. To them the Iraq war was a terribly painful experience, and I think we owe it to them to respect that.

> All of it within the past two days. Sharon is also reversing course and
> is completely uncharacteristically tossing olive branches at the
> Palestinians.

I saw that. Maybe he thinks the US is serious. Do you suppose he could have been made to think that without a war? By, for example, withdrawing much of the US aid to Israel?

> Some "message traffic" is definitely being transmitted and read . .
>
> This thing is ballooning. Comes as a bit of a jolt to me quite frankly.

We heard the same sort of thing after Kabul fell. Why, we were certain to get OBL within a few days! The result since then has been a mixed bag. Much that is good has happened. Some that is bad has happened. Even though events are moving fast now, I suspect we won't be able to truly judge the end result for years. Unfortunately, we don't have the luxury of waiting years to make decisions that will affect the end result.

> Looks to me like Putin, Shroeder & Chiraq Inc. have wound up
> marginalizing both themselves and the UN certainly in the eyes of one
> helluva lotta U.S. citizens and no doubt beyond.

I think there are a lot beyond the US that would agree that they're marginalized. They might not agree on who's responsible. They mostly wouldn't think it's a good thing, and there are a lot in the US, including me, who would agree with that part.

>> If your characterization were correct, those millions would have

>
> They folded their tents and shaddup after it became clear that they made
> ineffectual idiots of themselves.

I'm talking about the polling data, Brian. No tents or loud talk involved. Most of those in the US who wanted a UN resolution supported the war once the President declared diplomacy at an end. Clearly, they didn't feel the UN's permission was required. Equally clearly, they didn't feel it was unimportant.

There was an excellent skit on Saturday Night Live years and years ago wgich takes place at a fancy ball. First the Earl and Lady of Sandwich are introduced, and the Earl explains his new idea about serving meat between slices of bread. Then Lord and Lady Wilkinson explain their new method of swordplay, using two matched swords. Finally Lord and Lady Dou.....no, wait, this is a family newgroup.....
>

English is a language where the meanings of words are affected by sentence position, context and ending. English dictionary definitions are never complete for that reason.
>
>Even though language grows and develops, a single person cannot create his
>own definitions. No one will understand him. The definitions grow and
>shift but the usage of the general population not an individual's
>preference.

An individual can create a new word or definition, but it takes the acceptance of the majority to make the usage "proper".

Consider the word spam. Originally it was Spam, a brand name of a form of packaged meat. It was supplied in great quantities during WW2 because it could be eaten uncooked or cooked, and did not require refrigeration until the can

was opened. Civilians in England received lots of it via Lend Lease and in the years following WW2. It was so omnipresent that it became unpopular (hence the Monty Python skit of the '70s) and the word became a generic reference to all meat products of that general type..

Its meaning was transformed by the invention of junk email, which many endure as omnipresent and unwanted. Many people have no knowledge of the original meaning.

It is a true statement that I love Spam but hate spam.
>
>Languages grow, develop, and change. That is the way life is.

I intend to keep doing that on a regular basis :-)

>Have you stopped to realize just how long
>Ernie Kovacs has been dead?

Ernie Kovacs was a television comedy
pioneer. He "pushed the envelope" of
television technology beyond what the
"conventional wisdom" (CW) of the
time thought possible. His name ranks

with Mr. Gleason, Ms. Ball, Mr. Caesar
Mr. Benny and others of that era.

None of the above were radio amateurs
and none needed Morse code skill or
Morse code tests to bring humor to the
audiences of their time. :-)

It is said that Davy Sarnoff was a real
cut-up. Everyone who worked for him
laughed at his jokes :-)

>There exists an entire group of young
>adults who aren't even familiar with John Belushi.
>
There exists an entire group of young
and not-so-young adults for whom
"muddy waters" is a description, not
a proper name.....:-)

No, my exact words were "What shred of evidence do you have which
indicates that history will not repeat itself in the case of Iraq?".
In other words what information do you currently possess . . ?

That is not a request to predict the future.

The Arabs trying to push the Jews into the sea goes back to
the 1920s. It was instigated by your friends and mine, the
British, who loved to see the two factions go at each other as
long as they weren't the targets. When the Brits saw that the
Jews were going to be the winners in the struggle in the 1930s,
the Brits sided with the Arabs. Only WW-II got in the way,
otherwise the State of Israel would have been proclaimed
unilaterally earlier than 1948.

They would if they could. When I was living there in the 1960s,
Arab raids across the border into Israel were regular occurrences,
and today only the technology (suicide bombing, Katyusha rockets)
is different.

"Never Again" means Never Again....

I didn't ask for a synopsis of his place in television history. I asked if you realized how long he's been dead. The others you mentioned lived well past Ernie Kovacs and they all had longer careers in TV, Percy Dovetonsils.

> None of the above were radio amateurs

At least you share with them the distinction of not being a radio amateur...and not needing morse code skill...and not needing morse code tests. So the basic differences between you and them would be the fame, the money and the sense of humor.

I would agree. Part of the reason the FCC lets us "play" is that
it gives encouragement for us to build/ buy radios, antennas etc.
To build repeater systems and whatnot that can, when need
arises, to assist in public service. Also it helps having roving
ears on the bands to find the occasional distress call quickly.
Roving ears that were looking for some DX or such.

>Message-id: <20030413075638.18293.00000623@mb-ff.aol.com>

>If you look in the dictionary, the definition of the word amateur is: one who
>cultivates any study from without pursuing it professionally or with a view
>to
>a gain.

If you look in the dictionary you will also find the definitions for "egg"
and "head".

If you take the words seperately you are discussing two completely
concepts, both even being able to be adjectives, nouns or verbs. (ie: to
"head" the project [as in to lead], or to "egg" someone on, as to intimidate
someone into doing somethinng they might not otherwise do.)

But put them together, in either position, and you have even MORE
meanings. For example one can be an "egghead", a person who's sole world is
inside a computer, or a person who hasn't got the sense gave him.

Or one can be the head egg, an affectionate reference to the leader,
manager, boss, etc.

Therefore we can see how one can take the words "amateur" and "radio" and
get two completely different applications.

A "radio amateur" is a person licensed in the Amateur Radio Service, NOT a
person who simply enjoys building radio circuits. That is a radio hobbyist.

"Amateur Radio" is a radio service regulated by the Federal Communications
Commission with various purposes, those which can be found, but not limited to,
47CFR97.1.

>This could apply to our broadcast band circuit builder.

Not unless he has an Amateur Radio license.

>The definition of amateur says nothing about passing a test. Once you take
>this
>belief, it would be impossible to convince you otherwise.

If you take only ONE word, you'd be correct. But you are not. You are in
the United States. We speak English. Perhaps where you hail from they allow
anyone to redefine language and definitions at will, but we find that grossly
counterproductive and an impedement to communication.

Try to get over it.

Once in a while someone asks for volunteers for something, but I don't know why they need Hams for that

Most Hams use the bands to play. Mostly for contesting, working DX, etc. Skill building for emergency comm. is usually not discussed. The most that will be done is preparation for Field Day. Amateur radio is a playland, in which you're on your own.

Repeater systems are for a small percentage of Ham. Few actually participate. Most Hams USE repeaters.

I know of one repeater club. Unfortunately, I'm too worn out from the other clubs I've been to, to try to sign up. I don't believe it would work out.

Also, others have made promises, which they then seem to be too busy or something else comes up. However, Hams will take a day off just to attend a Hamfest. Its really a matter of priorities.

Skill building clubs do not exist. Help in antenna setup, tuning antennas and receivers, troubleshooting circuits, etc do not exist. Homebrewing clubs do not exist.

This problem predates the existence of the United States by several
centuries, Phil. The United Staes and the Brits are the New Kids On The Block.
The J's and P's were going at this long before either of us arrived.

And would they be any more "right" or "wrong"? Thier ancestors are
buried in those same grounds, Phil. So what gives the Israelis the right to be
"the cowboys" and evict Palistineans from lands they occupied for centuries?
(Please don't cite for me the US analogy that we did it...Yes, we did, and it
was an ugly, shameful period)

Such as?

>However, Hams will take a day off just to attend a
>Hamfest. Its really a matter of priorities.

Such as?

>Skill building clubs do not exist. Help in antenna setup, tuning antennas and
>receivers, troubleshooting circuits, etc do not exist.

Wrong.

>Homebrewing clubs do
>not
>exist.

Probably wrong, when one considers that the numerous QRP clubs all promote homebrewing (although not thier prime focus). Even more wrong when one considers that many high school "clubs" promote education through "homebrewing" and other such projects.

If you want a club for EXCLUSIVE homebrewing topics, quit yer bellyachin' and get it done. Your excuses are exhausted.

Steve

> reasons soldiers all over the world do.

As we are learning...that isn't true. Turns out many of those closest to
SH are not even Iraqi at all. As to your claim that the rest of the Iraq
military were just the same as other forces...well, let's just
agree to disagree. In fact, many (most?) were conscripted...in stark
contrast to the 100% volunteer US military.

> They have no more say in their
> government than soldiers elsewhere do (even less if you believe they were
as
> oppressed as claimed) and their motives are no less honorable then the
> soldiers elsewhere.

So the German SS were just like other military too?
Many of the Iraqi military apparently had no problems
with acts of torture, etc. but I guess they were just
following orders.

> Yet we are killing them in the most massive and
> effective manner possible, which is sad (not something to shout for joy
> over).

They all could have just surrendered too. No surrender, then
they faced the consequences.

> Our soldiers are dying there.

Agreed, and we all are unhappy about that.

> Again, not something to shout for joy over.

Who has shouted for joy about it?

> The war dead are always forgotten, perhaps more by those supporting war

Have you followed the news at all? Are all the journalists
falsly reporting?

> We don't know how many civilians or others are being killed -
> the military has never even gave an estimate of Iraqi casualties from the
> first Iraq war.

The number of inocent civilians sure isn't of any numebrs that
have caused the bulk of Iraq to be glad we have liberated them.

> The MOAB has been delivered to Iraq - not exactly a weapon
> intended to prevent collateral damage.

Depends on the target.

> Where do they intend to use it,
> especially with most of the remaining Iraqi troops isolated in towns? What
> other massive ordinance has been used? And where?

Other than the MOAB, what other massive ordinance
troubles you? Where was it used?

> > WHAT? This war has been covered by the press

> end it at that.

You stated... "I vote. Do I think it counts? No."

Just what then would it take to satisfy you as to your role
and/or participation in the governmental decision process?
I offered a perspective of what I think you want. If that's
not accurate, then please enlighten us as to what type
of government would make you happy...since, clearly,
our current government leaves you quite unhappy.

> Maybe you've such a high opinion of yourself
> you can't get past your own reflection.

I have no better or worse opinion of myself for anything
stated above. What your closing comment as to my
opinion of myself has to do with this thread makes no sense
to me at all.

Cheers,
Bill K2UNK

Bill,

Do not judge Arnett too harshly until the full story is out.

In today's Phila. Inquirer, there's a story about how CNN and other journalists were harrassed, threatened, tortured and killed by SH's regime. They kept much of what went on hushed up because of threats and reprisals to those still in-country, as well as translators, sources, crewmen, etc.

It means if a government official, elected official, or militrary
person wants to be critical of certain press coverage, that's
as much their right as the press has a right to report.
Just because someone is elected or accepts public office,
they don't lose their rights to opine as to press reporting.

Here again, being in the US allows me and others to make whatever
determination (2 vs 3) we want as individuals and we are then
free to express our opinions publicly as to what we think of the
actions of one or more protestors.

Which just shows them and CNN as being hypocrits by only now
coming to the forfront with this. The CNN management
caved to the SH regime because CNN didn't want to
lose their foriegn bureau status in Iraq. How many other despotic
regimes is CNN manipulating their reporting for so they (CNN)
don't have to leave that country? So much for
journalistic honesty.

By the way, this story broke on Fox News two or three days ago.
The Philly Inq is a few days late on this...but better late
than never in this case.

From K4YZ:

> "Amateur Radio" is a radio service regulated by the Federal Communications
>Commission with various purposes, those which can be found, but not limited
>to,
>47CFR97.1.

Yes "Amateur Radio" is listed in 47CFR97.1.

Is "Ham Radio" listed in the FCC regs? I believe not. It may (or may not) say something like: as they like to be called. That's not an official term.

There is no <official> term for the word "Ham Radio".

Hams like to dominate the amateur radio service, so they will make the claim that "Ham Radio = Amateur Radio". This will help convert amateur radio to THEIR agenda.

"Ham" radio is <mostly> amateur radio, but it also is includes a set of beliefs and traditions. Since there often is no logical reason for <some of> these traditions or beliefs, it is sometimes referred to as a cult.

We had a discussion on one night's net around here, and the one main consensus was the choice of wording.

Also was discussed, was volunteering in public service activities both in amateur radio, AS WELL AS other volunteer and/or public service related involvement. I wonder how involved other hams are outside of ham radio as well?

From what I have seen, I believe his numbers are just a little off. I can only speak of what I have witnessed locally, but I think that number is probably closer to 20% involved/80% uninvolved. That's typically the case in most organizations, 20% give or take a little, carry the most weight.

Bingo, and our retribution is the frequencies we have to enjoy when not participating in those public service or emergency communications to recreate or experiment in.

I would like to see a compiled list of technologies/equipment developed by
the amateur community that we enjoy today..... (Kinda like the inventions
we are reminded about during black history month...)

I wonder how long that list would be. For example, the MDT's (mobile data
terminals) in police cars could be an example of such. Basically it is
packet radio of sorts...

Well I am glad you can accept that.

>Is "Ham Radio" listed in the FCC regs? I believe not. It may (or may not)
>say
>something like: as they like to be called. That's not an official term.

Try to find "DXer", "ragchewer", "LID", and a host of hundreds of other popularly accepted "terms", Vippy, and I can assure you that they won't be found in Part 97 either...but they exist.

>There is no <official> term for the word "Ham Radio".

But "Ham Radio" is universally accepted as being understood as "Amateur Radio", both in the United States and abroad. Even in Japan, where words don't necessarily translate well.

Go ahead...stick it in your search engine and hit "send". Tell me that "Ham Radio" give you hits on flower arrangements.....

>Hams like to dominate the amateur radio service, so they will make the claim
>that "Ham Radio = Amateur Radio". This will help convert amateur radio to
>THEIR

Ham Radio IS Amateur Radio and vice versa.

There is no "agenda", accept in the mind of apocalyptic or paranoid persons. Are you apocalyptic or paranoid, Vipul?

>"Ham" radio is <mostly> amateur radio, but it also is includes a set of
>beliefs
>and traditions. Since there often is no logical reason for <some of> these
>traditions or beliefs, it is sometimes referred to as a cult

Amateur Radio is not refered to by any credible source (I say "cedible" since I know it excludes you, Vippy) as a "cult".

It does not meet the criteria under ANY circumstances as a "cult".

You continue to insist on calling it a cult and only make yourself look more-and-more silly. Why do you do that?

I don't have any way of finding out. This area was settled beginning in
1769. The original inhabitants, the Adena people were long gone leaving
some burial mounds filled with artifacts. The American Indians had no
permanent settlements here. They used this part of the Ohio Valley as a
hunting ground. The old, log section of my home was built as a
blacksmith shop around 1846. As far as the state of West Virginia is
concerned, the place belongs to me and the missus.

You probably don't have to worry about it. Guys like you and me don't
get invited to join. The necessity for an invitation looks pretty solid
for the club.

Vipul,

Your square-headed, nonsensical posts about amateur radio being
different from ham radio, about amateur radio being "sometimes referred
to as a cult and about people who can copy fifteen word per minute morse
not being able to copy five wpm are beginning to grate on my
sensibilities.

I have done a little experiment similarly around here... I have 100 repeaters programmed into a scanner of mine and connected the output to a PC sound card, and used a VOX type of program to record the audio for a 24 hour period four different times over the past 9 months for the hell of it. The range includes about a 50-60 mile radius of Midland, Michigan and the average time recorded for each time was about 34-37 minutes for each 24 hour timeframe. That included repeater ID's, announcements, and the time statements. This included 6 meter, 1.25 meter, 2 meter and 70 centimeter repeaters.

Wow.... talk about all these evil no-coders hogging the VHF/UHF band eh? (sarc.)

Actually the human brain is much more capable that we as a species are utilizing it. Studies estimate at only up to 10 percent usage of the total capacity of the brain capabilities by even our most intelligent.

Evolutionarily speaking we have advanced over the past thousand or two years, and maybe in 2000 or more years we will be even more powerful in reference to brain power! Who knows....

Lemme see if I have it then..... you guys (drafted or not) were put into a bullsh*t war/police action with a ton of crap and tactics and you still served proudly, are tramatized to various extents (depending on the person) and recieved little to no credit for serving the armed services upon return. Is this pretty close? (will try to figure better wording later....)

As I said before here, I may not support or believe in prior wars or police actions and the idiot politicians engaging them, but I proudly support those that served! Since I am currently not involved in the armed services right now, but in emergency services domestically, I feel the best I can do is to do my job the best I can, and in my free time do EVERYTHING within my capabilities to help the families the soldiers have left behind here...

Support our troops, and thier families!

(and no... this is not an attempt to "kiss ass", it is truly how I feel and anyone that knows me locally will back this up)

The many articles over the last twenty to thirty years describing
treatment of disabled veterans in VA hospitals and so on. The personal
experiences of both me and my wife (both disabled veterans). Discussions
with literally thousands of disabled veterans during our many interactions
with the VA over the years.

The deployment of that weapon to Iraq was discussed in a military press
briefing just a few days ago. Since, at that time, the Iraqi troops in open
terrain had long been defeated, leaving only troops in towns and cities, the
ultimate purpose of that deployment remains unexplained.

You mean the USA? No, there is no predictable pattern of helping our enemies following our many military involvements. We did not after WWI. We did following WWII and Korea (South Korea). We did not following the Bay of Pigs (Cuba), Vietnam, Lebanon, Grenada, Panama, Somalia, Serbia, or the first US/Iraq war. Heck, there is not even a predictable pattern of helping those we sided with after some conflicts (Afghanistan, for example).

> Why, Dwight, that would be providing an answer

You asked for evidence of the future, Dave ("I asked Dwight if he had any evidence..."). No, I don't have "evidence" of what we would do in the future. And, since you know I cannot possibly have evidence of that, ignoring that question is not "ducking the bullet." However, we can discuss the next step - a discussion and evidence are two different things.

We're stepping on some major toes in that region. Turkey, an ally for almost 50 years, is mad as heck that we're helping the Kurds. The Kurds are the most hated people in that region (Turkey, Northern Iraq, Northern Iran, and Northern Syria) - an anger fostered over many centuries. Given a choice of the US aiding Kurds or its neighbors of Iran and Syria, Turkey will side with Iran and Syria. If we turn Turkey into an enemy, Saudi Arabia will likely turn on us (strong ties with Turkey). Likewise, probably one or perhaps two of the former Soviet satellite states on Turkey's border will side with them (again, strong ties). If we start playing around on Russia's borders, Russia is not likely to just to sit around doing nothing. NATO is not likely to help if we end up in a conflict with Russia over vague issues with Syria (and Russia knows it). Besides, Russia would be thrilled to see Turkey walk away from the US. It is not a pretty picture, but all of this is possible. We're playing a game of global brinkmanship that has a growing chance of getting us all killed.

Very well said, Jon. Both groups (left and right) do this to some extent,
but many Republicans have taken it to the next step - stubbornly blind
obedience to whatever the Republican leadership says. And, even though I

consider myself conservative, I can't stand this way of thinking - agreement with some conservative views does not bind me to total acceptance of everything said by the Republican leadership. Sadly, those who blindly follow cannot even understand that way of thinking.

If I was looking in the newsgroups for information on getting a Ham Radio
license and payed attention to all the messages in the newsgroup I would
not want to become a ham radio operator. All the stuff that's being posted
because some people have opted for the no code licenses. The newsgroups
sound more like CB'ers than ham radio operators.
Don't get me wrong I am only upset with the people that put down the people
who get no code licenses. I personally would like to get a ham license
with the morse code but I have trouble learning the code, I find it gets
boring listening to the dih dah sounds after awhile.
If someone could come up with a sure fire easy to learn morse code lessons I
am sure a lot more people would opt for the license classes that use Morse
Code or CW abilities.
It's like they think if you don't take time to learn Morse Code you are
worthless.
At least this is what I get from the anti no-coder messages.
I do know it's not all Ham Radio Operators that think that way.
So I apologize to the Ham Radio Operators who think anyone should have the
ability to get a license.
Just my opinion.

I did not claim they were "just the same as other forces," Bill. What I said was that they, "became soldiers for the same reasons soldiers all over the world do." You continue to point to their conscription. Do conscripted soldiers have "more say in their government" or are they "less honorable then soldiers elsewhere" because of it? Remember that millions of Americans were conscripted into prior conflicts when answering that.

> (snip) Many of the Iraqi military apparently had no
> problems with acts of torture, etc. but I guess
> they were just following orders.

Most in the Iraqi military were not involved in torture.

> They all could have just surrendered too. No surrender,
> then they faced the consequences.

No kidding? Perhaps they thought the honorable thing to do was defend their country instead - even if they died doing so.

>> Our soldiers are dying there. Again, not something to
>> shout for joy over.
>
> Agreed, and we all are unhappy about that.

Bill, perhaps I missed it, but I haven't heard you utter even a single word of sorrow over the deaths in this conflict. Instead, you seem to be shouting for joy over this bloodbath we call war. Even here you couldn't say even a word of sorrow, only that you were "unhappy" about it. Well, I'm

certainly glad you're not happy about it.

> Have you followed the news at all? Are all the journalists
> falsly reporting?

The journalists are only getting access to very limited slices of this conflict - often events staged solely for their benefit (such as the statue of Saddam torn down by Iraqi civilians - driving the US Marine tank, of course).

> The number of inocent civilians sure isn't of any numebrs
> that have caused the bulk of Iraq to be glad we have
> liberated them.

Bill, all we've seen are looters in the streets, Kurds in the North, and participants of events staged for the cameras (such as the statue above). We have no idea what the "bulk of Iraq" feels.

> Other than the MOAB, what other massive ordinance
> troubles you? Where was it used?

The one, two, and three thousand pound bombs dropped on Baghdad, for example. And we have no idea of how many of these were dropped in other towns, or what other ordinance was used - again the limited press access.

> Probably over 1000 reporters, photogs, etc
> covering the war and you don't think that is
> "seeing"?

You know exactly what I'm talking about - the topic raised in this and previous threads (the thousands of dead and injured, including our own soldiers). Instead, we get nice still pictures of our dead flashed on the television screen, with no pictures of their mangled bodies - the REALITY of war. Again, if America is going to scream for war, it should have the balls to see the results.

Makes sense. Why pull our troops out and send them to Korea when we could leave them in place a while longer to mop up? Korea has been festering for half a century, a couple more months shouldn't make a big difference.

Within constraints, Bill. Lets separate those elected to public office
from those employed by the government.

Those elected to office represent, and are answerable to, only themselves
and those who elected them. They indeed have the right to say whatever they
want within the constraints of that (and, of course, the laws).

Government employees, including military personnel, are also free to say
whatever they want within certain constraints. The main one being they
cannot say anything as an employee or other representative of the agency
they work for unless it is the official position of that agency.

Lets look at an example of this in action. Joe Smith is obviously free to
say whatever he wants. There is nothing here to suggest his words represent
anything other than his own views. However, if Joe Smith identifies himself
as a soldier or is in uniform, he is not so free to speak out. He is no
longer just representing himself, but also his employer. His views may be
given more weight because of his official status or may be interpreted to be
the official position of the agency he is employed by.

So, as you said, government employees, including military personnel,
retain their right of free speech. But there are constraints on that when it
becomes more than just their own speech.

What do you think the US has been doing in the northern no-fly zone over the past 12 years? Their operations there allowed the Iraqi Kurds to escape the control of the Baghdad government and set up their own semi-autonomous government. This was facilitated by Turkey since much of the air operations over northern Iraq were based in Turkey. The Turks are worried that the presence of a fully autonomous Kurdish state (AKA Kurdistan) in Iraq would cause the Kurds in Turkey to want to secede from Turkey and join that state. The Turks are also concerned about the treatment of the Turkmen population of northern Iraq under Kurdish rule. But that worry is a far cry from siding with Iran or Syria. What Turkey wants is for Iraq to remain unpartitioned, with its Kurdish population sujects of the government in Baghdad and not in a state of armed rebellion. Since that's also what the US wants, the interests of Turkey and the US are aligned in this matter.

> If we turn Turkey into an enemy, Saudi Arabia will likely turn on us

The domino theory redux, eh? That's a huge stretch. For example, Saudi interests are much more tied to the US than to Turkey. And as I've said, there is little reason for Turkey to become our enemy.

> NATO is
> not likely to help if we end up in a conflict with Russia over vague

I think it highly unlikely that their displeasure would take the form of military conflict.

Who said they did? I was objecting to what they said, not to their right
to say it.

> The French built a nucleur facility, Russian night vision goggles have
> been found, etc.

The French nuclear facility was built in the 1970's. During the 1980's,
the US gave the Iraqis chemical and biological weapons agents. How can
you hold the French to account but not the US?

>> I'd want those contracts to go to the lowest-price qualified bidder.

>> toward the Arab world of the past 50+ years, they would hate us just as
>> much.

>
> BUT, the US is NOT a despotic regime...so your comment makes no sense.

The point is that it's our behavior toward the Middle East that many in the Muslim world hate. Do you see crowds in the streets of Damascus and Cairo demonstrating against the democracies in Sweden, India or Japan, for example? No, because those places don't materially affect the lives of Arabs. The US does.

>> If
>> you don't understand that you simply haven't bothered to find out what

The powerful there don't want certain freedoms in their own countries. That doesn't mean they give a damn about freedom in ours.

I'm not sure the situation is any better on the left. The antiwar crowd glosses over the brutality of the SH regime, ignoring behaviors that they would never ignore if the behaviors were being exhibited by a US ally.

> And, even though I
> consider myself conservative, I can't stand this way of thinking -

One of the most amazing aspects of recent events is the insistence by many so-called conservatives that we should trust the government with powers that could easily be abused and that it's okay to run huge deficits. A few years ago, this same crowd was loudly arguing that the government can do nothing right and is inherently dangerous to freedom, and that deficits were the number one problem facing the country.

So what? They were still in use in radio communications the late '70s.
That disproves your claim that:

"The slowest teleprinters in radio communications have been 100 WPM
for four decades"

Now, be a big machismo man-ums and admit that you made a mistake. You
posted something that just isn't true. An error.

> Phased out in
> favor of the Model 28s and 33s that came in at the end of the

>
> The TEST is NOT gone.

Poor baby. Can't you read what I wrote?

Do you really think Element 1 is a barrier?

> You keep misdirecting from TEST to "use."

Not at all. I was talking about use, not the test. You just don;t want
to admit that Morse code is used by anybody.

Sounds like an anti-morse fanatic.

> You don't have a valid
> reason for retaining the TEST except for ITU-R S25.5.

Sure I do. Lots of them. You just reject them. Not only that, you
reject the reality that morse is even used.
>
> Remember, LICENSING involves TEST, not "use."

No code test for above 30 MHz.

Is it all about HF to you? Is that what's really bugging you all these
years - you want access to the HF/MF ham bands, not VHF/UHF? Sure
seems like it.

> Can't "use"
> until the TEST is passed. Capice?

tui se pazz'

Exactly. Those places either have no dealings with them, or just buy
oil, sell their wares, and keep mum about everything else.

I know some people (women and men) who live or have lived in Syria and
Kuwait. While some of them don't like every aspect of those societies
and culture, they like it better there than in the USA. They could
leave any time but they choose to stay, in part because they see the
USA as decadent and immoral. Remember that their views are largely
shaped by American TV and movies. Does every American live, talk and
behave like the characters on "Friends", "Will & Grace", etc.?

They also sometimes have a different definition of freedom vs.
license.

While the VA doesn't have unlimited resources, I've not met anyone else
but you who claims that disabled vets are discarded or fogotten. I have
heard complaints that the bureaucracy takes too much time and that the
wait for services can be long.

I just explained the purpose of deployment. If no troops mass in open
terrain, the weapon won't be used. Why do you have a problem with the
weapon being deployed?

Play along, Dwight. Re-read what you wrote to Brian K. (I believe)
about predicting the future. Your comment about what we should be doing
followed it.

You can discuss all you like. Do you think anyone in government is
likely to ask your opinion about what the next step to be taken
regarding Iraq?

Did we occupy and set up a puppet government in Germany following WWI?
Did we set out to punish the German people?

> We did not following the Bay of
> Pigs (Cuba), Vietnam, Lebanon, Grenada, Panama, Somalia, Serbia, or > the first US/Iraq
war.

Please refer to my words "defeated enemy". We did not defeat Cuba or
Lebanon or Vietnam. We removed a dictator in Panama. We did not defeat
Somalia. We did not defeat and occupy Serbia and we did not occupy Iraq
after the cease fire in the first Gulf War. What happened after Grenada
in '83?

> Heck, there is not even a predictable pattern of helping
> those we sided with after some conflicts (Afghanistan, for example).

I didn't ask about helping those we sided with. Siding with someone is
in itself helping.

'tis a different world in which you live.

Certainly I've chosen, Brian. I've just not communicated my choice to
you. That isn't likely to happen. Maybe I'll do so after you've
communicated the answers to those questions posed to you which you told
us are "too hard".

> > All you really need to know is that someone whose maximum morse speed is

That doesn't make any sense. Do you post while standing up? I figured
you were already seated and I don't have much hope that you have the
sense to shut up. It isn't really about license class, Brian. It is
about you.

No license is required to "see" all the ham bands you'd like. I don't need a license to listen to a broadcast station. I'd need one to operate one. I don't need an amateur license to listen to the ham bands, I'd need one to operate in the ham bands. Luckily for you, no test of any kind is required to see Old Faithful.

Since it appears that morse testing will go by the wayside in the course of time, why worry about it?

Please read <http://www.fema.gov/library/civilpg.shtm> FEMA's guidelines for Radio Amateur Emergency Service (RACES). I am a RACES Operator for two counties. I maintain a packet node/bbs on floated batteries 24/7 for ARES. I have a working repeater that will be installed at a Government site as soon as the memo of understanding gets signed off. Our local ARES group has worked field day out of my motorhome parked at the county EOC for the past two years. Ditto a major Government exercise in an adjacent county. So, I am hardly a freeloader.

That said, let me disagree with the idea that one *must* provide emergency comm's to enjoy the *hobby*. I do it because I like doing it. If you don't, that's fine.

The radio spectrum is public property, just like public lands. Last I looked there were millions of acres of these lands set aside for *recreation*. Thats right, all of those national and state parks and forests are there for us to enjoy. IMHO, the same goes for the Amateur bands. Many of us derive enjoyment from providing comm's services to others - from disaster management org.'s to clubs running Special Olympics - but if your pleasure runs more to rag chewing or contesting - hey, be my guest.

What irks me is Morse - the requirement, not the mode. I'd be downright PO'd if I showed up to see Old Faithful but had to prove I could start a fire with flint & steel in, say, 30 seconds befor I was allowed into the park.

The bottom line is that they (the Iraqi soldiers) are/were on the
wrong side of justice, freedom, etc. They were defending tyranny,
injustice, torture, oppresion, and just about every other
act of evil one can imagine.

> > (snip) Many of the Iraqi military apparently had no

> No kidding? Perhaps they thought the honorable thing to do was defend
> their country instead - even if they died doing so.

Many apparently saw the light and left rather than defend the
tyranny. Those that didn't often paid the price. There's
nothing good about that, it is just the way things are.
How many Germans, Japanese, Italians died during WW2
defending evil regimes.

> >> Our soldiers are dying there. Again, not something to

What do you want me to do? It is tragic that eveil people
and regimes bring about the deaths of so many people.
I'm unhappy to see that anywhere...beyond that, what do
you want from me or anyone else?

> > Have you followed the news at all? Are all the journalists

>
> Bill, all we've seen are looters in the streets,

So the looting was staged for the journalists?

> Kurds in the North,

They seem to be doing a good job there.

> and
> participants of events staged for the cameras (such as the statue
> above). We have no idea what the "bulk of Iraq" feels.

You are obvioulsy not watching much of the reporting. Have you
read the "change of heart" story of a minister who went to Iraq
to be a "human shield" and heard first hand from Iraqi's that
they (the Iraqi's) wanted the war to come?

> > Other than the MOAB, what other massive ordinance
> > troubles you? Where was it used?
>
> The one, two, and three thousand pound bombs dropped on Baghdad, for
> example.

So? They were all targeted towards military and gvernment
targets. They were very accurate too...or do you just ignore
that.

> And we have no idea of how many of these were dropped in other
> towns, or what other ordinance was used - again the limited press access.

Bunk again...the cameras were rolling in many places. We all watched
downtown Bagdad get hits. Your claim of limited press
is totally bogus.

> > Probably over 1000 reporters, photogs, etc
> > covering the war and you don't think that is
> > "seeing"?
>
> You know exactly what I'm talking about - the topic raised in this and
> previous threads (the thousands of dead and injured, including our own
> soldiers).

The "thousands" of dead appear to be limited to the Iraqi
military. That's a sad loss of life, but that is the possible fate
any military faces. The alternative, taken by many it seems,
was to abondon their cause. Those that did are alive.

As to our own, we are lucky the numbers are low.
I mourn the loss of any coalition soldiers.

> Instead, we get nice still pictures of our dead flashed on the
> television screen, with no pictures of their mangled
> bodies - the REALITY of war.

Do you think people don't understand the horrors of war?
Must you graphically display it to satisfy your demands for
such coverage?

> Again, if America is going to scream for war, it should have
> the balls to see the results.

You are demanding a level of graphic display that isn't
even done with auto accidents and/or victims

of other incidents. Should the press should have shown the dead bodies of the people that jumped from the Trade Center on 911 so we could all better understand the horror of the terrorists acts?

I can somewhat understand that...much the same as
any employee speaking for their company. Elected
officials and many appointed officials are often
expected to interact with the press. Likewise, those
in the military at the top have a direct interaction with the
press.

Cheers,

He may not feel that the Bush administration can speak for his Father, but I'm not sure he can, either. The acorn didn't fall particularly close to the tree in the case of Ron Reagan, so I'm not sure how special his insight into his father's Administration is. And he admits he doesn't know W. well at all. There are people close to the Bush administration who also were close the Reagan administration. I suspect their opinions would be more informed, but we'll probably have to wait until W. is out of office to get their unvarnished views.

It would possibly reward French and German companies for being more efficient. What, we don't believe in the free market any more? (Not that I'm naive enough to think that we believed in it in the first place.)

>> The powerful there don't want certain freedoms in their own countries.

ARRL can rerun a LOT of OLD material on that. Copyright free
so it doesn't cost the membership anything extra. :-)

>I wonder how long that list would be. For example, the MDT's (mobile data
>terminals) in police cars could be an example of such. Basically it is
>packet radio of sorts...

In mobile radio applications, the commercial and civil government
applications were first. Police two-way radio was pioneered
before WW2 and amply demonstrated during WW2 using FM on
VHF in extremely harsh environments.

Both time- and frequency-multiplexing techniques were again
pioneered by commercial and military applications, the telephone
companies seldom mentioned although they were first in using
SSB techniques (both in wireline and radio). Multichannel radio
relay, born in WW2, proved that up to 8 separate voice channels
could exist on the same radio circuit without interference with
one another. That grew to dozens of voice channels (and many
more teleprinter channels) on the new microwave cross-country
radio relay installed just after WW2. Single-channel SSB was
proved first by the US military for the Strategic Air Command.

The "etymology" of various communications techniques is a
history-dig exercise that can only be done over the entirety of
all radio communications services. ALL of radio is in an
on-going evolutionary period now, ever since its birth as a
communications medium in 1896.

As for data terminals in mobile applications, that requires a
James Burke sort of "Connections" viewing, done without bias.
The first widespread application of data over "another" medium
might be the closed-caption text transmission on broadcast
television. That text rides as ASCII digital characters in the
vertical blanking interval, one character group every 1/60th of
a second in the US NTSC system. That wasn't economically
possible until semiconductors had arrived in sufficiently low
prices by the end of the 1960s. The first data-computer
terminals as we recognize them today were also made

possible by semiconductors (and, certainly, integrated circuits). Since such terminals operate at low voltages for everything but the CRT, it was a natural for operation at the low primary power voltages in vehicle electrical systems.* Cathode ray tubes, one of the last still-used vacuum tube types, is still bulky and something of a power hog, not very good for mobile operations...but the LCD screen is very low power and was available in 1970. Plasma display screens were also available but then quite expensive and limited to military applications.

Packet radio was born in the common-carrier area of communications. Research "ALOHA" for one method that was studied extensively (and written up) in the 1970s. Since teleprinters already had four decades of experience over radio, adaptation of higher-rate teleprinting (now known as "data") over radio was a technological shoe-in. The Teletypewriter Exchange system (TWX) already permitted "dial-up" from the teleprinter direct to another teleprinter. Modems were born around 1960 or so and permitted the ARPANET to exist in a computer complex to computer complex net environment. ARPANET itself was an outgrowth of many different comm applications and eventually evolved into today's Internet.

The communications networks of today are highly dependent on both hardware and software of the Information Technology (IT) field of electronics. They have long since outgrown the bulky, noisy teleprinters that ruled written communications by radio-electricity between 1920 and 1970. Radio is merely a carrier of the mobile data terminal signal today and that can be done by dozens of ways, including coexistance with voice communications on the same circuit. See the various WLAN implementations of today for an example of a slightly-different method of communicating digital information interference-free over short distances within the same bandwidth.

Packet radio, as most radio amateurs know it, is an outgrowth of the simple single-channel RTTY circuit done in the 1930s. By 1950 there existed four time-multiplexed TTY circuits on the same RF carrier using tube technology. [SSB of the 1930s could already handle up to 16 TTY channels plus a voice channel simultaneously but was essentially frequency-multiplexed] With the advent of semiconductors, not only were bigger mainframe computers possible but also the small single-user computers, plus modems, plus software easily adaptable to the type of communications carrier mode, higher-rate terminals, larger random-access memory and mass-memory storage, and finally, the personal computer itself. The personal computer made the BBS or Bulletin Board System possible for message exchange and that evolved into BBS networks developed by computer hobbyists. Such BBS networks were

adaptations of already-existing technology (ARPANET again)
and were the predecessor of present-day Internet newsgroups.

As to position-location technology used by some radio amateurs,
that had several origins beginning around 1967. GPSS grew out
of the USN Navstar program that began testing about 1970. GPS
is the heart of every present-day position-locating device used by
civilians and military alike...including the growing "OnStar" service
for certain civilian vehicles.

What seems to be overlooked by so many (overly-proud) radio
amateurs is the trial by a wireline communications medium. An
example is the real-time EKG (or ECG if you prefer) waveform
transmission. That was done first on an ordinary telephone
circuit. It was then adapted to be a subcarrier on an existing
FM mobile-fixed voice radio. Wireline and radio means may be
mixed since the EKG transmission-reception was designed to
do that. The importance there is that remote EKG monitoring
is possible, not in the way it is done.

SSB was born on wireline communications as a means to put
several voice circuits on a single pair of wires on a long-distance
path. That grew into putting several voice channels on a single
radio circuit...along with a dozen-plus teleprinter channels. The
final evolution was the single-user SSB radio for HF voice now
enjoyed by both radio amateurs, private and commercial boat
owners/captains, and long-distance air carriers.

Manual telegraphy was born on wireline communications. 1844
is one year, the first year a city-to-city telegraph circuit was
finished and proven. It didn't begin on radio. Early radio of the
1896 to 1920 era was so primitive that only on-off keying was
possible to send any information whatsoever by a radio means.

The modern radio era is still evolving and many kinds of
communications means with it. That progress and the
implementation of such progress is done by industry and
academia, sponsored sometimes by governments, and
eventually used or discarded by the majority of its users.

<kc8pmx@diamondcs.net> writes:

>Lemme see if I have it then..... you guys (drafted or not) were put into a
>bullsh*t war/police action with a ton of crap and tactics and you still
>served proudly, are tramatized to various extents (depending on the person)
>and recieved little to no credit for serving the armed services upon return.
>Is this pretty close? (will try to figure better wording later....)

Ryan, thank you for your support. <salute>

I volunteered and served 8 years in the US Army, 3 of those years
doing HF-VHF-UHF-microwave communications as assigned in
Tokyo just after the Occupation was over. That was not, in any
way "traumatizing" to me, just part of my life experience.

I received little "credit" from the USA due to some idiotic
bureaocracy involved in changing majors ("G.I.Bill" education).
I've received NEGATIVE CREDIT in here from a couple of
NON-VETERANS (never-served total rear-area widgets) for
doing professional HF communications...while all they've done
is amateur radio on HF using an archaic, simplistic, slow-speed
communications mode...and then demand that ALL amateurs
must follow their example of "excellence" in amateurism.

Phrased another way, quite unkindly since that is what their
attitude deserves, those two examples are simply so full of
themselves, their arrogance, their elitism, that it lends a
great deal of negativism about a hobby, a recreational
activity involving radio.

>As I said before here, I may not support or believe in prior wars or police
>actions and the idiot politicians engaging them, but I proudly support those
>that served!

Good on you! As one who actually served IN the military, I'll
give you an e-version of a thank-you handshake. Sincerely.

There's a number of places around the USA where such
veterans cannot possibly shake hands...with anyone. Those
have symbols on the ground where they now rest.

>Since I am currently not involved in the armed services right
>now, but in emergency services domestically, I feel the best I can do is to
>do my job the best I can, and in my free time do EVERYTHING within my
>capabilities to help the families the soldiers have left behind here...

Good spirit! Way to go!

>Support our troops, and thier families!
>
>(and no... this is not an attempt to "kiss ass", it is truly how I feel and
>anyone that knows me locally will back this up)

There are several participants in here who have "all the answers"
for everything...yet have NO experience in "solving problems" on
geopolitics yet they will expound on such as if they were the UN
themselves. In one way it is amusing, but it is also tragic...they
are the same ones who insist that all in a radio hobby do
exactly as they say or be subject to some kind of "censure" for
speaking against them. They are the lawgivers, the "Moses"
come down from the mountain with the tablets (an aspirin
surrogate). :-)

And you just accept that?

> That doesn't mean they give a damn about freedom in ours.

Agree completely...and it is a primary objection of those
people, the powerful, to the American way of life, for two reasons...
1. We value individual life, equality and justice...and
2. We have been incredibly successful at implementing it
for over 200 years.

Have we been perfect at it? No, but we've been damn
well better than any other nation at it.

Cheers,
Bill K2UNK

You are a biased morse fanatic. QED. :-)

>Who, me? You have more than a dozen posts dated April 13 to this
>thread alone. Looks like obsessive-compulsive behavior......

"Just passing the time of day..." :-)

>Just an opinion.

NO kidding?!? :-)

What are your scribblings in here? Tablets from the mountain?

[acetominophen or acetyl-salicylic acid?]

>Ah - so it's not just the TEST you are against.

...and some hard-nosed arrogant morse fanatics.

>> The subject sub-thread was LICENSING.
>
>Where?
>
>The thread title is "ARS license numbers"

Oh ye of little brains but of many sheepskins... :-)

The NUMBERS can't accumulate if the TESTING isn't done.

>> Hello...? LICENSING involves TESTING.
>

>Not necessarily.

Oh? Check out Part 97 again. :-)

[connect all four synapses and start computing...]

>That's simply not true.

You have that as a macro, don't you? :-)

>So? Almost all maritime users have given up sailing ships. Does that
>mean nobody should use sailboats anymore?

No, they use cheese sandwiches. What else? :-)

>That's a very, very small group of people.

I happen to like cheese sandwiches. Why are you against us
cheese sandwich lovers?

I wouldn't try to design a single circuit with a cheese sandwich.
Maybe you would?

>Projecting your feelings onto another are you?

Nope. You are the one wanting to call a 2N2222 a cheese
sandwich. :-)

Was that what you were taught at that ivy-league academy
many moons ago?

>Tsk, tsk, tsk, Len, I've never seen you practice any "tolerance"
>towards those who don't agree with you. Instead you respond with
>name-calling, insults, factual errors, ethnic/racial/religious slurs,
>excessive emoticons and the usual generalized infantile behavior. Etc.

Waaa...waaa...waaa... :-)

Projecting your feelings on others? :-)

>Practice what you preach.

I don't preach, Reverend Jimmie. No "sermons on the antenna
mount" from me about the glory and majesty of morse.

>> Remember that I was the one who pointed out your ERROR
>> about amazon.com allegedly not being profitable.
>
>It's not an error.

You made an error! You made an error! :-)

>When I wrote about Amazon's profitability, they were losing money.
>Fortunately, that has changed.

It changed over half a year ago. :-)

At the time you wrote it, you were NOT AWARE of what was
happening. :-)

>What correction?

Tsk, tsk, tsk...

>Gee, are you showing us more "tolerance"??

As much as you do... :-)

>I'm not Jewish.

So?

>So? Does that mean I must drop it too?

Drop down and give us ten!

>How do you know? Why are you so fanatical about hating morse USE?

I'm not a "fanatical hater," poor baby. I'm against the morse
TEST.

>> It is on life-support only
>> in amateur radio. AMATEURS.
>
>From the Latin word meaning "to love".

Did your supermarket have a sale on passion fruit this week?

"Amateur" radio: From Part 97 meaning "without pecuniary
interest."

>> Ancient Radiotelegraphy Society. Beepers.
>
>Ah - look at all that TOLERANCE from Len!

Besides beeping, how have I maligned the Archaic Radiotelegraphy
Society? By calling them "ancient" instead of "archaic?"

>So? Are you the censor from the Lanark Street Ministry of Information?
>You have told some of us here to shut up. Is that your idea of
>TOLERANCE? Is that how you support the American ideal of free speech?

The right of free speech is contained in the First Amendment of
the US Constitution. I defend that. Once I took an oath to
defend that Constitution...as the official entrance to US Army
military service.

You never took such an oath. You never served in the US
military.

You neither show nor practice any "tolerance" to those of differing
opinions to yours.

You carry on in here like some ancient noble talking down to
inferiors, one who cannot ever be accused of a single wrong-
doing, mistake, or error.

>Can't you take a little tweak, Len? Seems to me you preach tolerance
>and acceptance but don't do it yourself.

What "little tweak," boy? You into the "noblesse oblige" thing
now?

>> >Since Morse code IS used in amateur radio, it IS useful to amateur radio
>> >operators.
>>
>> NOT to ALL of them.
>
>Nobody said "ALL of them".

Tsk, tsk, tsk...Jimmie can't take a "little tweak!" :-)

>More than a dozen posts in one thread in one day.

Just passing time on a late Sunday morning, boy.

>The subject line is "ARS License Numbers"

Wow! True!

It ain't about Reverend Jimmie preaching to the masses, either.

>The question was about voice modes.

The subject was Reverend Jimmie preaching to the masses on
The Proper Way to Behave. :-)

>Why?

Why not?

>The point is that the maximum throughput you quoted is way too low.

What is your experience as a professional communicator, boy?

Can you sustain throughput at exaggerated rates sending
nothing but five-letter code groups?

How do Q Codes help there?

>Do the teleprinters have fun?

As much as your table lamp does. At times it glows. :-)

>So what? They were still in use in radio communications the late '70s.
>That disproves your claim that:
>
>"The slowest teleprinters in radio communications have been 100 WPM
>for four decades"
>

>Now, be a big machismo man-ums and admit that you made a mistake. You
>posted something that just isn't true. An error.

Kiss my yes, Reverend Jimmie.

I made an error: I tried to post factual information to a radio god,
thinking he might understand a point...which the poor thing did
not and, to get even for being slighted, went after nearly every
sentence with "corrections."

Poor think. Another obsessive-compulsive guru wanna-be.

>You wrote:
>
>"The slowest teleprinters in radio communications have been 100 WPM
>for four decades"
>
>Four decades ago is 1963. If there were slower teleprinters in use in
>radio communications after 1963, you are just plain wrong.

Oh, my yes...WRONG! Advertise that on billboards, write an
article in the National Enquirer!

Each and every post that was ever made is "incorrect!" and
should not be believed!

Forgive me, noble god of (amateur) radio.

>I don't think you have. List them.

Why?

>You're not in amateur radio, Len.

As of this writing I am off-line for an Internet newsgroup.

Where are you?

>Then why all the comparisons?

Why not?

>Where?

When?

>How?

Fried.

>You're describing yourself, again.

No, hungry. Didn't have much lunch. :-)

>Sounds just like you, Len. Tell us again about the 100 wpm
>teleprinters.

Model 28s and 33s made by Teletype Corporation, Chicago?

>Poor baby. Can't you read what I wrote?

I can't understand most of it. :-)

>Do you really think Element 1 is a barrier?

Yes.

>Not at all. I was talking about use, not the test. You just don;t want
>to admit that Morse code is used by anybody.

Watch the haste in typing. You doing this on company time?

You just don't want a single negativism about morse code.

>Sounds like an anti-morse fanatic.

Sounds like you can't keep control in here.

>Sure I do. Lots of them. You just reject them. Not only that, you
>reject the reality that morse is even used.

I reject you as a rational hobbyist and newsgroup participant.

:-)

>No code test for above 30 MHz.

Einstein!!!! :-)

>Is it all about HF to you? Is that what's really bugging you all these
>years - you want access to the HF/MF ham bands, not VHF/UHF? Sure
>seems like it.

Sure seems like Reverend Jimmie keeps spoiling for a FIGHT!

Too bad he didn't enlist in a US military and do REAL
communications.

Too bad he hasn't done any professional radio communications.

Too bad he can't see beyond his own personal interests to that
of others.

Too bad he can't be tolerant of those he perceives as lower class.

The "Gang of Four" title fits. Intolerant, self-righteous worshippers
of morsemanship.

>What IS your problem, Len? The test will be gone when the FCC drops
>it. I've been saying that for over three years now. Big deal. Get over
>it. Grow up, for heaven's sake.

The morse code test is NOT gone, sonny. Still there.

Been there for three years. Been there since 1912.

Morsemen are NOT gods of radio, any radio. Grow up, get
over the fact that you are NOT worshipped for morsemanship.

>Stop being such a one-trick pony. Or part of a pony, anyway. ;-)

Practice TOLERANCE, Reverend Jimmie.

Practice what you demand of others.

Works two ways, boy. Even for morsemen gods.

> Why then do you object to their opinion?

Their statements are ad hominem. They are intended to belittle those with whom they disagree rather than argue a case, and I just don't think that's the way public discourse out to be carried out, particularly by those in leadership positions. It has the effect of polarizing the debate, making it harder to reach agreement.

>> OBL and crowd do not represent the entire Muslim world any more than

>> > sense.
>>
>> The point is that it's our behavior toward the Middle East that many in

>> the Muslim world hate.
>
> What behavior of ours makes a rational Muslim hate us then?

Our support for Israel is number one on their hit parade. Our support for repressive regimes also garners us no friends -- outside of those regimes themselves. Over the years we have demonstrated a near total lack of concern for the well-being of the inhabitants of the Middle East outside of Israel. The only thing we care about, as far as they can tell, is getting our way -- getting our oil in particular. While their views of the US are somewhat over-the-top (much like our views of them), there is enough truth in them to keep the pot boiling.

The fact is, for all our talk about making the world safe for democracy, what we really mean is making the world safe for America. If in doing so we liberate others, we're happy, of course. But we're perfectly satisfied to leave other peoples in the grip of repressive dictators if it serves our interests to do so. Our words don't always match our deeds, and that's a recipe for generating distrust and hatred.

>> Do you see crowds in the streets of Damascus and Cairo demonstrating
>> against the democracies in Sweden, India or Japan, for example? No,
>> because those places don't materially affect the lives of Arabs. The US
>> does.
>
> So let me repeat the question: What do we do that makes them hate us?
>
> Should we have NOT helped Kuwait 12 years ago?

We should have, but did we do that out of altruism, or did we do it because it was in our own interests? The GHW Bush administration certainly SAID it was a compelling interest of the US.

> Should we have not ended the Taliban regime after 911?

Sure, but again, did we do it for the Afghans or did we do it for our own security? More to the point, if our purpose was to free the Afghanis, why did we wait through years of Taliban repression before acting? In the case of Iraq, why did we wait through 20 years SH before liberating the Iraqi people? Answer: Because it was 20 years before it became in our interest to do so, irrespective of the suffering of the Iraqi people.

>> >> If
>> >> you don't understand that you simply haven't bothered to find out

>> >> foolish pandering.
>> >
>> > Tell that to the women in Iraq, Syria and several other countries.
>> > Tell that to the non-Muslims in those countries.
>>
>> The powerful there don't want certain freedoms in their own countries.
>

> And you just accept that?

Define "accept." If you mean am I in favor of overthrowing by force every regime that restricts freedom in any way, no, I'm not. We certainly should encourage more freedom by other means where we can. And in cases where the repression turns exceptionally brutal and where we can intervene by force, I don't have a problem with doing that.

But as Jim said, what's freedom to one person is license to another. We better be very careful about what constitutes freedom worth fighting for. There's no absolute freedom in any society -- ours included -- and what constitutes acceptable limitation of freedom is influenced by culture.

>> That doesn't mean they give a damn about freedom in ours.
>
> Agree completely...

I think you misunderstood me. By "don't give a damn" I meant they don't care one way or the other whether we have freedom in the US, not that they dislike our having freedom in the US.

> and it is a primary objection of those people, the powerful, to the
> American way of life, for two reasons... 1. We value individual life,
> equality and justice...

No, Bill, that's not quite right. The problem is not that we value those things. It's that we value them for us but all too often, not for others. At least, not when valuing them for others is inconvenient for us.

> and 2. We have been incredibly
> successful at implementing it for over 200 years.

I remind you that for its first 89 years the US allowed human slavery. For the next 100 we had legal discrimination against people on the basis of race. Yes, we're getting better at living up to our principles, but we ought not to be looking down our nose at the entire would.

> Have we been perfect at it? No, but we've been damn well better than
> any other nation at it.

Really? The British Empire abolished slavery in 1833 (in the home islands it became illegal in the 1770's). The US didn't abolish it until 1865, and then only after a bloody civil war. Which society was "damn well better" at implementing equality and justice?

As for modern times, can you be explicit as to how we implement our values of life, equality and justice better than, oh, say, Sweden?

Jon

Sorry Dave. It never occurred to me that anybody would use that to dodge my meaning but Barnum was right: one should always write to the lowest common denominator. I should have used camping or some other "use" as an example.

> Luckily for you, no test of any kind is required to see Old Faithful.

Why is it lucky Dave? I can start a fire without a bic. I keep the tools in my "possibles" bag. I can also hold 5 out of 5 .45ACP rounds in the 10 ring. These are far more useful skills than Morse, especially since my laptop decodes it faster than you can send it ... if you have a decent fist of course.

>
> Since it appears that morse testing will go by the wayside in the course

Ain't it amazing how a little kick in the 'ass' gets a bully's attention?
Of course they are all wide eyed as a deer in a spotlight. Who would of
thought the great 'paper tiger' would actually fight? Keep up the terrorism
and they aint seen nothing yet.

We are going to have to have a standing army in IRAQ for at least 2 years.
That in itself should be sufficient 'incentive' for Iran and Syria and
Palestine and Saudi Arabia, and ISREAL to get their crap together. If
not....well they KNOW the answer to that one now.

Frankly, I don't see the press being part of any effort
to reach agreements. They report and that's it.
Your mileage may vary.

> >> OBL and crowd do not represent the entire Muslim world any more than

I think OBL is a pretty extreme example of a problem
member. OBL isn't just some McVeigh or other serial
killer...OBL fosters suicide bombing on a global basis.

Who else has taken that stance?

> >> >> I think they're off-base there, but that's how they see it

> themselves.

That's a point I totally agree with. We are post cold war and we shouldn't
catet to regimes of that ilk any more than CNN should.

> Over the years we have demonstrated a near total lack of
> concern for the well-being of the inhabitants of the Middle East outside
> of Israel.

I think that's an extreme statement and one in which I
don't agree to the extent you indicate.

So we have two choices then:
Take on all regimes immediately...or never
take them on. If we don't take on a regime
today we forfeit doing so in the future?

> dislike our having freedom in the US.

I disagree. I think many of the extremists absolutely hate
that American women have the rights that they do.
I think they hate the freedoms of expression we allow.

If your only measure you use is slavery, perhaps you're right.
There's much more than racial equality involved.

> As for modern times, can you be explicit as to how we implement our values
> of life, equality and justice better than, oh, say, Sweden?

I see the standard of living, the American justice system, etc.
If Sweden or any other country was better then why do so
many people leave those countries and come to the US?

Cheers,
Bill K2UNK

2584. When is a 2N2222 transistor a cheese sandwich?

> calling it a cheese sandwich, you're the one who is the cause of confusion.

Apparently, there is some confusion here on what is a 2N2222 transistor, compared to a cheese sandwich.

There are those that believe in relative definition. Following this logic, if everyone believed there is no gravity, then gravity would no longer exist. Others believe in scientific proof.

Often words are redefined in a specific setting. The goal of this redefinition is often to control others or to increase their importance. Note that it is not just one person "redefining" words, it is a group. They new definition is often widely accepted, but its still not correct. If everyone jumped off a bridge, would you? Often the people that created the new definition will start to believe their new definition

One example is calling the lowest of tasks an "Engineer". A Component "Engineer" is someone that sorts components in a database, orders them, and (if they are lucky) - updates them with new components. It is a lowly task. Yet, with the word "Engineer" after it, it makes it sound important.

When politicians say that an irrelevant test, such as the MCAS, increases "standards", they only do so to look like they stand for better education. Not knowing what the test is, they may honestly believe the test increases "standards". In reality, it does not increase standards because the information tested is not relevant.

One example is linking the buying of an HF transceiver to "advancement of the radio art", when the <real> goal is to get people to use Morse code. Soon people will forget the original purchase and start to believe that Morse code is "radio art".

Another <overused > example is "no code = no ham, know code = know ham". This is redefining a Ham as someone that knows code. Amateurs that chose not to are not Hams.

Another example is saying when something is "in use", it is useful. Contesters occupy as many bands as possible, and claim that each band is useful. Simply contacting someone and exchanging callsign information is not useful. Maybe useful to that person, but not to the amateur radio hobby.

Redefinition works fine for those with an agenda. Honesty works better for the hobby. So, one should not call cheese sandwiches 2N2222's. It may work fine for a while. Eventually it will be bad for everyone involved. If you are told to do so, you should politely refuse.

Yes, Vipul, you appear to be very confused.
>
>There are those that believe in relative definition. Following this logic, if
>everyone believed there is no gravity, then gravity would no longer exist.

Subjectivism vs. objectivism.

>Others believe in scientific proof.

You're off base again, Vipul.

The existence of things is provable given a few basic assumptions. What humans choose to call these things is purely subjective.

Once upon a time, transistors were called "crystal triodes". Typical bipolar transistors are just that. But that name never caught on, and "transistor" is the term used for about the past 50+ years.
>
>Often words are redefined in a specific setting. The goal of this

It's for clarity.

>Note that it is
>not
>just one person "redefining" words, it is a group. They new definition is
>often
>widely accepted, but its still not correct.

If a big enough group defines a word a certain way, then that's the definition.

Get used to it, Vipul - that's how languages work.

Would you call yourself a Professional Engineer?

>If everyone jumped off a bridge,
>would you?

Depends on how high the bridge is and how much I'm being paid.

>Often the people that created the new definition will start to

Would you outlaw contests?
>
>Redefinition works fine for those with an agenda.

Your agenda seems to be redefinition of common terms.

>Honesty works better for the
>hobby.

> So, one should not call cheese sandwiches 2N2222's.

I agree!

And one should not claim that there is any difference between "ham radio" and "amateur radio".

One should not claim that "amateur radio" does not require a license.

>It may work fine
>for
>a while. Eventually it will be bad for everyone involved. If you are told to
>do
>so, you should politely refuse.

I politely refuse your attempt to redefine the term "amateur radio".

The French and German companies don't have to pay the taxes that fund the war, so they can bid lower.

I am suddenly reminded of the story of Henny Penny, who sowed the seed, watered, weeded, harvested and ground the grain, made the dough and baked the bread, all while her "friends" refused to help. But when it came time to eat the bread.....

Heard an interesting editorial on NPR on the way home today. The main point was that what Iraq needs now is aid and infrastructure - water, power, communications, security, etc. And they need it now, not when the UN gets done defining a committee to name the panel that will study the problems of how to address the transitional agency that will direct the effort to figure out how to set up the decision process that will lead to a synergy of resources to determine when to begin rebuilding......

(and that's just a paraphrase)

I don't see any moral difference between OBL and McVeigh. Both attacked what their warped minds saw as their enemies.

>> > What behavior of ours makes a rational Muslim hate us then?
>>
>> Our support for Israel is number one on their hit parade.
>
> So we should NOT support Israel?

Remember what the topic is here, Bill. I'm trying to explain my view that it's what we do in the Middle East that they hate, not our freedom. So whether we SHOULD support Israel is beside the point. Let me ask you this: Do you think if we decided to support the Palestinians over Israel the Muslim world would remain just as angry at us? I don't. I think it's what we DO that matters to them.

>> Our support for
>> repressive regimes also garners us no friends -- outside of those

CNN? Wow, you really DO have a press fixation! Turn the channel dial off Fox once in while, will you? Even if it's just to go to ESPN. Fox is a self-marketing and propaganda machine that nobody with any sense can take seriously.

>> Over the years we have demonstrated a near total lack of concern for
>> the well-being of the inhabitants of the Middle East outside of Israel.
>
> I think that's an extreme statement and one in which I don't agree to
> the extent you indicate.

Then you should learn more about the history of US relations with countries in the Middle East. For example, in 1953 the CIA and British SIS set up a military coup to topple the legitimate government of Iran, which was at the time led by Premier Mohammad Mossadeq. The resulting government ran a nasty secret police called SAVAK which controlled the population using the usual secret-police methods for years. The Shah's Iran was an ally of the US -- of course! Naturally, Iranians associated the US with the repressive regime and with SAVAK. And in 1979, when the Iranians revolted, Americans asked plaintively, "Why are they mad at us?" Why, indeed.

The US motive for all this? Well, it was Britain that came up with the idea. See, Mossadeq was thinking of nationalizing the oil industry, which was controlled by the British. Naturally, the Brits weren't crazy about THAT! The US was worried that Iran might go Commie (this was 1953, after all, and here was a guy nationalizing an industry), so it wholeheartedly supported and participated in the idea. The CIA was knee-deep in the coup. Where was our concern for the well-being of the Iranian people? Nowhere to be found.

It's not just in the Middle East that the US is viewed as a bully out to serve only itself, either. Ask around in, say, Central and South America. See what folks there think about the history of their relations with the US. You'll find several well documented instances of the US toppling legitimate governments that didn't toe the US line.

I'd like to think we're past that sort of thing now. But I can't say I'm absolutely certain of it. And I think it's perfectly understandable that a lot of people are deeply suspicious of US intentions and fearful of our newly stated willingness to attack countries that we think MIGHT pose a threat to us. Will we attack only brutal regimes that violate human rights or that actually threaten us? Or, once on the slippery slope, will we find it ever easier to justify attacking regimes we see as not serving US interests?

>> Iraqi people.
>
> So we have two choices then:
> Take on all regimes immediately...or never take them on. If we don't
> take on a regime today we forfeit doing so in the future?

No, of course not. But if we knowingly allow a repressive regime to fester unopposed -- or even aided! -- for years we do forfeit any justification for saying we're attacking it to eliminate repression. And we also forfeit any justification for criticizing other countries for NOT supporting the attack when the attack is not in their interest.

>> Define "accept." If you mean am I in favor of overthrowing by force

>
> How far do you let culture influence limitations to individual freedoms?

I don't think there's any easy answer to that. I do think it's important to recognize that there are cultural differences and that one culture's point of view is not necessarily better than another's.

>> >> That doesn't mean they give a damn about freedom in ours.
>> >
>> > Agree completely...
>>

>> others. At least, not when valuing them for others is inconvenient for
>> us.
>
> You lost me here. How about an example to make your point.

Iraq is a perfect example. We were happy to help Saddam gas Iranians when we were pissed off at the Iranians (despite the fact that we knew perfectly well he was brutalizing his own people). Then he made the mistake of interfering with one of our oil suppliers. Tell me, what was the moral difference between Saddam's attack on the Iranians and his attack on the Kuwaitis? Why did we help him with one and attack him for the other? The answer, in case it isn't obvious, is that in each case we were pursuing our self-interest. In the case of Iran, it wasn't important

to us that hundreds of thousands of Iranians were killed and maimed. But when we went to Kuwait's aid the press was filled with stories of the suffering of Kuwaitis. (Which was real enough, let me add.) Moral relativism of the worst sort.

And then when we decided Saddam had to go, we were shocked! Shocked to find that he had been killing and torturing his own people! Shocked to find that he had WMD (which we helped him get)!

>> Really? The British Empire abolished slavery in 1833 (in the home

>> "damn well better" at implementing equality and justice?
>
> If your only measure you use is slavery, perhaps you're right. There's
> much more than racial equality involved.

Sure, and there are plenty of positive things one can cite. But the jingoistic "we're better than everybody else" refrain is just not supportable. We have our warts.

>> As for modern times, can you be explicit as to how we implement our
>> values of life, equality and justice better than, oh, say, Sweden?
>
> I see the standard of living, the American justice system, etc.

That would be the system that has about 3% of our population in jail, on parole or on probation, right? Want to hazard a guess what the percentage is in European countries? What to compare crime rates with theirs?

And, oh yeah, that would be the justice system that now allows the government to imprision an American citizen without charge for as long as they want.

> If
> Sweden or any other country was better then why do so many people leave
> those countries and come to the US?

Not many of them have left Western Europe for the US lately, Bill. It's certainly true that the US led the way to democracy. But some countries that came to democracy and freedom later than the US are at least as good in most respects and arguably better in some. The US is a good country. I wouldn't want to live anywhere else. But while acting like we're the best of everything may make us feel good, it's hubris with a capital H.

2591. The best CW speed for hams is 0 WPM

Newsgroup: rec.radio.amateur.policy
Date: 2003-04-15 01:04:13 UTC
From: "A.Melon" <juicy@melontraffickers.com>
Message-ID: <7ecd39bdd709e4b54f100312a1dabf68@melontraffickers.com>
Source record: 64836

No CW, no problemo ...

For WRC 2006 (or 2007), It is suggested that CW
becomes forbidden for hams below 500 GHz and
with CW power limited to 1 microwatt in oder to
limit the pollution to others qso in other countries.

But military administrations are allowed to
authorize old farts CW coders on the military
bands to practice freely CW. Nobody cares what
happens on military bands ...

It is also suggested that the major manufacturers
YAESU, KENWOOD and ICOM, stop to sell HF
transceivers allowing the CW mode considering
than only about 1 per cent of rig owners use the
CW mode.

Only some weeks now to wait for the suppress
of mandatory CW at ITU ...

It's certainly the case that immediate aid can be most effectively
delivered by those already on the ground. But I think that editorial
doesn't do justice to the UN. If there is delay, it'll be the politicos
that cause it. One thing the UN knows how to do is manage relief programs.
They've certainly had enough practice over the past 50+ years.

Source record: 64828

From N2EY:

>>Often words are redefined in a specific setting. The goal of this
>>redefinition is often to control others or to increase their importance.
>
>It's for clarity.

The redefinition of "Engineer" to more an more lower tasks may have had more to do with unions than for clarity. The Engineers are non-union. By including more and more tasks as "Engineering" tasks, the union can be reduced.

In some cases, ENTIRE jobs are redefined as "Engineer" jobs. One can ask for a BSEE for a "manufacturing Engineers" or "product Engineers", rather than let union people do these non-technical tasks. These jobs are often very low skilled. A shop person can have more than enough qualifications to do the job.

Internal job descriptions are VERY exaggerated. You will NEVER do the advanced electronics items in the job description - and they have NO intention of letting you. They don't represent the actual work you will be doing.

The job description also is NEGOTIATED between union and management- it has NOTHING to do with "clarity".

>If a big enough group defines a word a certain way, then that's the
>definition.
>
>Get used to it, Vipul - that's how languages work.

No, that's how politics work. Outside that group, the MAJORITY of people will disagree with those RE-definitions. The language has not changed - its application in this situation has.

>Would you call yourself a Professional Engineer?

No, I would not. Here's why. In reality, I am a professional Engineer, in that I am in the EE profession. In industry, its APPLICATION is negative. You get disrespected for having the title of "Professional Engineer".

>>If everyone jumped off a bridge,
>>would you?
>
>Depends on how high the bridge is and how much I'm being paid.

That's where I'm different. I had a chance to "sell out" for significantly higher pay. I did not take it. Now, I regret it.

>In reality, it does not increase standards because the
>>information

>>tested is not relevant.
>
>It's called "accountability".

It makes them look "accountable". Testing for irrelevant skill does the exact opposite. Sort of like Morse code testing. Inserted before the General class license, its very irresponsible and embarrassing to the hobby. Even code lovers should be embarrassed about that.

>>Another example is saying when something is "in use", it is useful.
>
>Why? If something has a use, it is useful.

You can use a toothpick(Morse) as a fork(communications mode). Its not ideal. If many people did that it(Morse) would be used, but not useful.

Do you still eat with your hands? Maybe if you ate a cheese sandwich.

Contesting is spectrum squatting. Eventually, commercial interests will petition to the regulators. If the ARRL's response is "we use it for contests", the result will not be good.

>>Maybe
>>useful to that person, but not to the amateur radio hobby.
>
>Would you outlaw contests?

No. Contests do have some use. Its just not compelling enough if that all there is.

>Your agenda seems to be redefinition of common terms.

I like to experiment, homebrew. Most Hams <in my circles> do not like that.

>And one should not claim that there is any difference between "ham radio" and
>"amateur radio".

Ham radio is traditions, history, beliefs. Amateur radio is the license.

>One should not claim that "amateur radio" does not require a license.

I never claimed that. I just gave one example, which happened to not require a license.

>I politely refuse your attempt to redefine the term "amateur radio".

I have not redefined amateur radio. I <basically> agree with the definition given in the ARRL handbook.

Its the APPLICATION that makes it "Ham" radio. That's not necessarily bad, its just a different emphasis - one not shared by most EEs.

"Ham" radio was redefined, I mean CLARIFIED, perhaps.

>
>Do try to stay on topic.

Well, who said that Morse Code was a growth industry? Granted, there
seem to be more products for helping people learn the Morse Code now
than at any other time in history. As another poster observed, the
interest in QRP caused by new, off-the-shelf QRP rigs like the Yaesu
FT-817 is making CW more popular than ever. And now that we're on
the downside of the current solar cycle, using these rigs will be more
dependant on CW than ever. Maybe you're right -- Morse Code *is*
a growth industry! Perhaps I should take a break from digital modes
and dust off my Bencher paddles!

>you think the US should first attempt to eliminate such despotic regimes
>without force?

Jon:

I certainly think that the attempt should be made. And, in the case of Iraq,
the "attempt" went on for 12 years! How many innocent Iraqi citizens died
at the hands of Saddam Hussein and his bloodthirsty sons during that time?

> If so, do you feel that the US should attempt to elicit
>allies in these efforts?

Of course, whenever possible, and as long as these "allies" don't intend to
impede the process in order to preserve their own economic interests.

>If so, do you think the US should dictate to
>those potential allies the specifics of the efforts to be made, ignoring
>any potential ally that doesn't agree in every particular with the US
>view?

Naturally, that would depend on how this particular "ally" is behaving
at the time. If they are willing to make a significant sacrifice of their
own resources and the lives of their military personnel in order to assist
us in achieving the goals of freedom, justice, and democracy for an
oppressed people, then I would work with them very closely indeed,
and be more than willing to address any of their legitimate concerns.
OTOH, if they are stonewalling, exercising their veto power in the
UNSC, and otherwise covering their own economic interests rather
than standing up for the human rights of an oppressed people, then they
get a brush off, and at least a generation's worth of marginalized
credibility. Moreover, when we (America) are finished doing the

fighting, dying, and sacrificing, they don't get a role in the aftermath, other than perhaps doling out sacks of grain in some UN-managed humanitarian aid operation.

The United States of America is the most powerful nation on Planet Earth. We use our power for purposes which create and support peace, freedom, and democracy everywhere else on this planet -- and we do it at great expense of our own wealth, both human and material. We respect the cultures of other nations, and we generally don't interfere -- except when human rights are being violated and OUR national security is threatened. I am just glad I am living in an era when we have a President who understands and upholds these concepts. God Bless America!

Jim,

I duzn't offen disagree with yous, but this obsuleet stuff has got to go.
Duz you no that in kollege, the perfesser kept wantin to speek in codes?
Heck, secont koorter phisics he wuz tryin to explane the energy spent by a
spring. Dang if he weren't using code! This guy goes and draws some dum
squiggly line. I objected and he sent me back to math class. That durned
guy went and starts explaining with all this obsolete code. Kin you believe
they actually use *Greek*! Delta he calls it. Looks like a little triangle
to me. Hoo boy! Heck, I went back to the phisics class and tolt him so! I
asked him what this stuff was about grams and kilograms. Ever one nos that
you measure in feet and pounds. He sez ok and asked me what a slug was - so
I slugged him. Danged if they didn't ship me off to Vietnam after that!
LOL

Please forgive the little 'humor' I had to slip into this thread.
Obviously, each profession has its' own set of 'codes'. :)

That is the silliest and most inane statement I've ever heard. Those who
have elected to seek and achieved the title of "Professional Engineer" are
respected.

> It makes them look "accountable". Testing for irrelevant skill does the
exact

That is YOUR opinion. Many have a different opinion. Lately the HF bands
have been rather poor and the activity has been the best in the Morse
portion of the bands.

>
>
> I like to experiment, homebrew. Most Hams <in my circles> do not like
that.
>

So what? Lots of EEs don't like to homebrew either. That doesn't make them
any less a EE than one who does.

>
> Ham radio is traditions, history, beliefs. Amateur radio is the license.
>

But to get the license, one of the things you are tested on is "good amateur
practice". This good amateur practice is the traditions, beliefs, and
history of ham radio, which is synonymous with amateur radio.

You are defining everything that you personally don't like as "ham radio"
and what you personally do like as amateur radio. Well the amateur radio
community doesn't agree with your definitions.

There's a camping test? Does it consist of written and practical
skills?

> > Luckily for you, no test of any kind is required to see Old Faithful.
>
> Why is it lucky Dave?

To save you all of the whining about the inequity of it all.

I can start a fire without a bic. I keep the tools
> in my "possibles" bag. I can also hold 5 out of 5 .45ACP rounds in the
> 10 ring.

Bully for you. I'd imagine it'd be easier starting a fire without a
cheap pen. The shooting skills are probably handy on a visit to Old
Faithful or when camping.

> These are far more useful skills than Morse,

...not in amateur radio unless you're trying to shoot down a dipole of
set fire to the shack.

You are the fellow touting "relative definition". I've not observed you
following any logic at all. We aren't in an "if everyone believed there
is no gravity" situation. We're in a "We all call it gravity; you call
it talcum powder" situation.

> with the word "Engineer" after it, it makes it sound important.

I'm sure we're all familiar with the "updates components in a database,
orders them and updates them Engineer". You really need to have a big
office door or have the words painted in very small letters for that
one.

Why those devious bastards! Imagine them selling transceivers when
their real goal is the insidious growth of morse code.

> Soon
> people will forget the original purchase and start to believe that Morse code
> is "radio art".

It's the mind control LSI chips built into those new transceivers which
makes mind control possible, Vipul.

> Another example is saying when something is "in use", it is useful.

If that's your example, it's a bad one.

> Contesters
> occupy as many bands as possible, and claim that each band is useful.

Tell us please, which bands aren't useful. You'll save us a lot of
wasted time and effort if we can just manage to avoid those useless
bands.

> Simply
> contacting someone and exchanging callsign information is not useful.

I don't know of any contest where the callsign is the exchange. I'll
assume that you goofed because you know nothing more about contesting
than you do about someone knowing ten word per minute morse forgetting
how to receive morse at 5 wpm. Whatever information exchanged by a
contester is quite useful in achieving a higher score in a contest.

> Maybe
> useful to that person, but not to the amateur radio hobby.

Not everything I do on the air need be useful to all of amateur radio.

> Redefinition works fine for those with an agenda. Honesty works better for the

> a while. Eventually it will be bad for everyone involved. If you are told to do
> so, you should politely refuse.

Great. Take your own advice and quit attempting to redefine amateur
radio by making believe that "ham radio" is something different. It is
dishonest of you.

When I was a kid trying to leverage my dad into buying me something, I'd
often try the old, "but all the kids have one" ploy. Dad's response
was, "If all the kids ate horse manure sandwiches, would you want one?"

>The best CW speed for hams is 0 WPM

Technically, this is impossible.

>No CW, no problemo ...

Actually, CW is an abbreviation for "Continuous Wave".

In non-amateur, non-Ham applications, CW means "an unmodulated sin wave". In amateur radio, it means "Morse code".

EE's that don't like to homebrew are probably in it just for the money. I truly
enjoy building circuits outside of work.

>You are defining everything that you personally don't like as "ham radio".

Thats not true. Hams like to set up antennas for their stations. I participated
in some of those. Ham radio includes antenna setups, which IS technical.

> It has EVERYTHING to do with clarity. Unions make absolutely sure that
>they know what's expected of them, and what to expect from the corporation.
>If
>they didn't, there'd be nothing to "negotiate" at contract times.

The only things that are expected are things like the pay scales, hours, and
overtime issues.

The job description is meaningless. It is rationalization, probably by BOTH
sides. Go complain about a job description to a steward and they will not do
anything about it. If something to do with your hours, they will help you.

> And in the application of the words "radio amateur" within THIS peergroup,

The only problem is that we've got to get it all done before Bush leaves office.

You're not a god of anything, Len. Grow up, get over the fact that you are NOT
worshipped. For anything.
>
>>Stop being such a one-trick pony. Or part of a pony, anyway. ;-)
>
> Practice TOLERANCE, Reverend Jimmie.

Show us how it's done, oh master of your own domain!
>
> Practice what you demand of others.

Why? You sure don't.
>
> Works two ways, boy. Even for morsemen gods.
>
I and others have tried being civil to you but the response from you has always been repeated insults, ridicule, name-calling, factual errors, ethnic/racial/gender slurs, excessive emoticons and/or general infantile behavior.

So show us how this tolerance thing is done, Len. Practice what you preach rather than the behaviors listed above. I don't think you can.

>
>What taxes to fund the war?

HAW! That's a GOOD one, Jon!

How much of the federal budget, and the GDP is spent on defense in the USA?
France? Germany? Japan?

Yes, those countries have high taxes. They spend their tax money on other
things, and then let the USA pay for their defense.
>

Really!? Jeeze, the blankety-blanks made me PASS it too! And that took practice. Had to waste hours gaining an impractical skill I never use. So, I have a better idea. Since our goal is to keep people out of Amateur Radio, let's make everybody shoot center fire pistol at the NRA sharpshooter level to gain access to the HF bands and at the expert level to use Morse. That'll *really* reduce QRM and it makes at least as much sense as requiring Morse to use SSB, right? And think of all the great call's that'd become available for FCC to sell. Quick, right your congressman ....

>I do. I'd believe that WA8ULX took $250 to take a CBr's test for him.
>Lucky they didn't get caught .... yet

No dufus boy that was not the case at all. Just for your info, a couple of Cbers who were going to take there CBplusser Test, bet me I couldnt pass the EXTRA. Not only did I pass it with 100% score, with no studying, I also got to collect the money from the Cbers. But the best part was I got to see both of the Fools fail the NoCode CB Plusser Test.

Any tool works in a jam, ROTC and common sense 101.

> While it's understandable to try to get the warloads
> to help us chase down OBL and crew, one wonders what the longer term
> ramifications will be if the government in Kabul remains too weak to
> assert sovereignty over the whole country.

That's a very likely scenario. We didn't go in to "reconstruct"
Afghanistan, we went in to dig out OBL and to do that we also took on
the Taliban as a somewhat lesser objective. Since the Taliban were the
goverment we have the responsiblity to at least try to help the
Afghans put together a replacement government. There are limits on how
much in the way of assets we'll put into this effort, there is only
so much we can or should do to help others help themselves. Including
Iraq.

> Fortunately, Iraq is not Afghanistan. I think it will be easier to put
> dollars to work to good effect there.

That better be the way it goes or we're really gonna have a BIG
problem.

I have no idea where I read that at this point, some article somewhere
maybe a month ago. Some pundit beasting on the lack of funding for
Afghanistan.

> > . . . When was the last time any of 'em cleared
> > out a despotic regime and worked to establish a democracy in it's place?
>
> NATO did just that in the Balkans a few years ago.

With who doing the heavy lifting in the air which paved the way?
Remember the F-16 jock who ate bugs for a week to survive in the woods
after he got shot down? When was the last time NATO did anything which
we didn't lead? France kicked NATO out of Paris years ago and quit the
organization.

> In Gulf War I, the
> French had forces involved. Maybe the Germans, too, I don't remember for
> sure.

I think their contingent in Afghanistan is the first German
out-of-country deployment since The War. And today we have Japs in the
Gulf. Poland put forces into the current fray too. I haven't seen
"The Bloc" bitching about them jumping in. Odd.

> The French even took a few casualties. (Funny, you don't hear much
> about that these days.) There are German forces working alongside US
> forces in Afghanistan right now. (Another thing you probably won't see on
> Fox.)

Last time I watched TV I think was the 2002 World Series. TV drives me
nuts. I hang out in Reuters, API, the WashPost, the Saudi Arab News
and some others.

Good archived series on the origins of the Muslim faith (lengthy read)
and a source for the view from the other side of the coin.

http://www.arabnews.com

> French forces are also involved right now in trying to stabilize a
> highly volatile situation in the Ivory Coast. And they recently deployed

To protect our security yes, we damned well better kick butt. To loot
& pillage, no. And don't bother with the Spanish-American war
nonsense.

> Except that we HAVE done just that in the past. Consider
> the Mexican War. The Spanish-American War. The Panama Canal. Invasion of
> the Dominican Republic (multiple times).

C'mon, gimmee a break Jon, most of those go back well over a century
ago. Ya forgot Haiti multiple times, Grenada, Noriega, Pablo Escobar
and a number of others. You don't support the Monroe Doctrine? You'd
rather Sweden & Belarus had a UN mandate to patrol our back porch?

> During the cold war, there was a
> power balance, and to most of the world there was one side that was
> clearly preferable -- the US.

There never was an actual balance of powers, ask Gorbachev, Lockheed &
the CIA. Soviet military power was largely propaganda, never in this
world would they have fired the first shot.

> But now that there is but one superpower,
> what prevents us from doing whatever the hell we want? (Some of that

You're saying is that you have no faith in the leaders we freely
elected and the checks and balances and assorted admonitions in the
U.S. Constitution to prevent the U.S. from running amok with our
military. Summarily rejected concept.

> Taking all that into account, it's clear that what France, Germany and

> When all you have is a hammer....

Based in their own sordid thousand year history of periodically
mauling each other. We don't have that genetic flaw. How long has it
been since we attempted to conquer and occupy Mexico or Canada? How
many times have various Euros invaded their neighbors in just the past
hundred years? They're a bunch of hypocrites. They can't past their
own history and are trying to "Euopeanize" us via rhetoric at the UN

and in other channels. The Kyoto Treaty debacle comes to mind here. To hell with 'em, let 'em sink in their own socialist PC swamps. Come the days when the UN and NATO fall apart we'll still be what we were the day after 4 July 1776. I do hope they remember who has the big stick when they start their crap again.

> All I'm asking is that you try to put yourself in the other fellow's
> shoes. If you're unwilling to do that, you're certain to never understand
> his point of view.

Been there, done that. I did look at it from both sides. Going into the diplomatic upheaval which preceeded the invasion I was 100% neutral WRT to whether we should or should not go in without a mandate. I'm not a hawk or a hardcore conservative. It was the behavior of the "bloc" during those last days before we went in which put me squarely in the pro-war camp.

> > Premature conclusions. Doesn't really matter anyway at this point, the

> (last I looked) American families that haven't found it to be a romp at
> all. To them the Iraq war was a terribly painful experience, and I think
> we owe it to them to respect that.

Semantics. From Websters: "Romp: an easy winning pace; also : RUNAWAY". The speed of the advance from Kuwait to Bagdhad which will rewrite military tactics and logististics texts. There are a couple other "official definitions" of "romp" which have nothing to do with the context I used and neither of them have anything even remotely to do with battle casualities.

> > All of it within the past two days. Sharon is also reversing course and
> > is completely uncharacteristically tossing olive branches at the
> > Palestinians.
>
> I saw that. Maybe he thinks the US is serious. Do you suppose he could
> have been made to think that without a war?

In so many words he publicly stated that the war has changed the politik of the Israeli-Palestinian conflict. I haven't seen much about it so far but I have a hunch that the way we knocked out SH is giving Israel's neighboring enemies the willies which in turn might be giving Sharon an opportunity to tone down his level of beligerence. Simultaneously respected Palestinian moderates are trying to squeeze Arafat out to political pasture. Maybe the time has finally come to settle the the conflict which triggered the destruction of the WTC and

installed our troops in Bagdhad. That would not be a bad output from
our efforts of the past three weeks eh?

. . . .

> > They folded their tents and shaddup after it became clear that they made

OK, I was thinking the protesters in Berkley, etc. They have too much
time on their hands, they need heavier rosters . .

As far as the polls are concerned as of yesterday 70% of the U.S. is
opposed to any more "premptive strikes" against anybody including
Syria. Dubya is not going to invade Syria. Period.

WRONG!

Professional Engineering licenses are available in many engineering
disciplines. Electrical Engineering is one of them.
>

> >class
> >> license, its very irresponsible and embarrassing to the hobby. Even code
> lovers
> >> should be embarrassed about that.
> >
> >That is YOUR opinion.
>
> Its also the FCC's opinion.

No, it isn't.

FCC set up the structure that way, not hams. FCC could have done the
license lots of other ways, but they didn't. For example, some folks
think there should be only one class of license, with all privileges.
FCC could have done that, and merely required 5 wpm for HF/MF.
>
> >Lots of EEs don't like to homebrew either.

Busman's holiday.

> >That doesn't make them
> >any less a EE than one who does.
>
> EE's that don't like to homebrew are probably in it just for the money.

Nope. Untrue.

Some EEs don't have the time
Some EEs work in areas other than radio
Some EEs would rather spend their time on the air
Some EEs leave their work AT work.

Here's why there isn't more homebrewing in amateur radio: Economics - of both time and money. For the kind of rigs most hams want, it costs MORE to homebrew one than to buy its equivalent ready-made or assemble a kit, even if you have EE-level knowledge and skills. Also, except in unusual circumstances, a homebrew unit has very low resale value.

Where homebrewing "wins" is in situations where:

A ham wants to build something that is "off the beaten path"
A ham has parts sources other than Digi-Key, Mouser, etc.
The cost of the thing being built is dominated by hand labor

Which is why you see lots of hams homebrewing antennas, linear amplifiers, etc.

> I truly
> enjoy building circuits outside of work.

That's good! How many amateur radio stations have you built? I've built-from-scratch about eight complete HF stations. That doesn't include kits, converted military surplus, restored/modified manufactured rigs, test equipment or other projects.

I dont know who told you that. The present testing system is a JOKE. No knowledge needed to pass the writtens. Even the ARRL realizes it, they even offer courses now to teach the material after you have taken and passed the test. Isnt that a great testing system.
My question is why even have testing at this point. The Morse Test is history, the written might as well be.
Thank God I got rid of all my "Ham CB Gear".

DXCC to accept YI/ operations approved by commanding officers (Apr 15, 2003) -- ARRL Membership Services Manager Wayne Mills, N7NG, says the League will accept for DXCC credit YI/ operations from Iraq by US or British military personnel

provided the operator has written permission from his or her commanding officer.

"There is precedent for this," Mills said, citing an operation during the 1991 Gulf War. "These operators will need written authorization to operate from their commanding officers

until an interim Iraqi government is in place," Mills said. After that point, operators would need documented permission from Iraqi authorities. The Daily DX has reported that several hams with the US military in Iraq have been showing up on the air in recent days. Mark Smith, NG5L, of North Carolina, has been active from near Nasiriya as YI/NG5L on SSB, usually around 0500 UTC near 14.195 MHz. He's also been spotted in Europe and North America on other 20-meter frequencies and at other times of the day. Jim Dunkerton, YI/KT4CK, has been active on 15-meter SSB between 1430 and 1600 UTC. Bob Furzer, 9K2ZZ/K4CY, has apparently crossed into Iraq from Kuwait and has been on the air as K4CY/p or K4CY/m.

[mental picture of stern taskmaster wagging finger... :-)]

Chewing out on cheese sandwiches?

New local paper advertisement today:

Complete HAM Dinner....$39.99...serves 8 to 10 people.

Old Fashioned Bone-In HAM...$1.99 a pound.

On the dinner, I'd suppose a photocopy of a ham license is
sufficient proof for purchase... :-)

Lots of old-fashioned hams already in here, confusing transistors
and cheese sandwiches, talcum powder and gravity. They seem
to have a bone to pick with everyone not old fashioned...or have
too much bone in their cranial cavity. :-)

Trying to speak seriously around here (if that's possible), I'd offer
these comments:

The late Eugene Hubbell, W7DI (formerly W9ERU) had won a
code cognition contest at a 55 WPM rate, copying on a non-
electric typewriter. His business cards and Illinois QSLs
mentioned that. Gene had a unique ability to totally
concentrate when receiving CW, seeming to enter an
almost trance state when doing so.

In written correspondence with a long-time radiotelegrapher
and amateur extra back around 1980, he mentioned another
"speed freak" buddy down near San Diego (he was in the
San Francisco Bay area). Those two regularly went at it
at "70 to 80 WPM" (claimed). I can't vouch for that. :-)

The US Army Signal Corps "coder, burst keyer" accessory
of the 1960s was designed to send 300 WPM from a pre-
recorded message in an effort to thwart interception. Since
recording apparatus existed on all sides during WW2 days,
it wasn't good for any "encryption" through high rates. The
intent seemed to be for absolutely minimum time on the air
for IDing and DFing. No human has been found to be able
to "read" 300 WPM of any on-off coding rate.

From those two examples I'd judge the "upper limit" on
on-off keying cognition as being just under 100 WPM
equivalent. Others' mileage will vary...and others motors
will no doubt overheat in dragging out replies... :-)

Jimmie seems confused...as if he was hearing things 2+
years before he was born...

>>Often words are redefined in a specific setting. The goal of this
>>redefinition is often to control others or to increase their importance.
>
>It's for clarity.

So...why do you want to change the EIA registered part numbers
of a transistor to "cheese sandwich?"

2N2222 is only six characters. "Cheese sandwich" requires 13.

>If a big enough group defines a word a certain way, then that's the
>definition.

I get the sneaky feeling you are going to call a Field Effect
Transistor (FET) as a "picnic sandwich." :-)

[picnics are held in open fields...]

>Get used to it, Vipul - that's how languages work.

Okay...when delicatessens and coffee shops start putting
EIA registry numbers for semiconductors on their menus,
we can begin to talk... :-)

>>If everyone jumped off a bridge,
>>would you?
>
>Depends on how high the bridge is and how much I'm being paid.

Amateur radio is "...not for pecuniary reasons."

It's gotta be the "religious aspect," then, a "belief system."

>If a big enough group defines a word a certain way, then that's the
>definition.

So far, the delis, coffee shops, restaurants, and cook book
publishers aren't calling sandwiches by EIA registry numbers.

>Maybe where you work. I'm not a components engineer.

Very few know what you do at work. You are afraid to explain
anything.

From your concentration on sandwiches, I'd come to the
conclusion you work in the company cafeteria...

>It's called "accountability".

Which is it, purchasing department, accounting, or cafeteria?

>You're not making any sense.

You are the one mixing up "cheese sandwiches" and transistors.

Offhand, I'd say you aren't making any sense at all.

>Why? If something has a use, it is useful.

...therefore there MUST be a license test for it?

>>Contesters
>>occupy as many bands as possible, and claim that each band is useful.
>
>If they are not useful, why keep them?

Political pressure from cafeterias and puchasing departments.

>Would you outlaw contests?

Do you contest outlaws?

>Your agenda seems to be redefinition of common terms.

Your agenda seems to be making everyone else eat
their words... :-)

>And one should not claim that there is any difference between "ham radio" and
>"amateur radio".

FCC hasn't used the terms "ham radio" as synonymous with
"amateur radio."

Perhaps the FCC building cafeteria doesn't have cheese
sandwiches on its menu? :-)

>One should not claim that "amateur radio" does not require a license.

Tsk, tsk, tsk, there were dozens of hams (amateur radio operators)
before 1912.

Not only was there no radio regulating agency but the "hams"
picked out their own "callsigns!"

>I politely refuse your attempt to redefine the term "amateur radio".

No problem. I politely refuse to consider you fully rational or
a radio god. :-)

But if there's not a moderate goverment in Kabul that's capable of
controlling the country, what's to prevent the Taliban from regaining
control? Or if not that, what prevents a regional warlord from hosting the
Taliban and al Qaeda types in some corner of the country? If that happens,
sure, we could go dig them out again, but how much better would it be not
to have to do so?

Come on, Brian. You, I and the French all know that whether or not Poland
participated wouldn't have affected the decision to go to war one bit.
Those who criticize the war are going to level their criticisms where they
count. Just as those who criticize the French for not supporting the war

don't waste their breath criticizing Angola for not supporting it.

> Summarily rejected concept.

Reject what you will, but that international adventurism of the past -- including the not-so-distant past -- was all performed under the aegis of leaders we freely elected and with the same checks and balances in place. Some times it was done with the knowledge and support of the Americn people, some times it was not.

> Based in their own sordid thousand year history of periodically mauling
> each other. We don't have that genetic flaw. How long has it been since

Substantially less than a thousand years. For that matter, how long as it been since we attempted (with success) to conquer and occupy the Indian nations?

> How many times have
> various Euros invaded their neighbors in just the past hundred years?

Are any of the European states that tried to invade one another operating today under the same form of government as they were at the time? Specifically, did any of them invade one another when their governments were democratic?

> They're a bunch of hypocrites. They can't past their own history and are
> trying to "Euopeanize" us via rhetoric at the UN and in other channels.

To this extent you're right: They're saying, "We KNOW what the end result of militarism is. We lived it in the 20th century. The US should learn from the European experience." You don't have to agree with them to recognize that their concern is based on experiences we've never had.

> The Kyoto Treaty debacle comes to mind here. To hell with 'em, let 'em
> sink in their own socialist PC swamps.

They seem to be doing quite well in their "swamps."

> Come the days when the UN and
> NATO fall apart we'll still be what we were the day after 4 July 1776. I

> neighboring enemies the willies

"Shock and awe," did someone say? :-)

> which in turn might be giving Sharon an opportunity to tone down his
> level of beligerence. Simultaneously respected Palestinian moderates are
> trying to squeeze Arafat out to political pasture.

That last part was happening before Iraq. I think Phil Kane has it right
that probably having both Sharon and Arafat out of the picture would make
it easier to find a solution (I'm paraphrasing). I'd settle for just
having Arafat gone, though.

> Maybe the time has finally come to settle the the conflict which
> triggered the destruction of the WTC and installed our troops in

> Bagdhad. That would not be a bad output from our efforts of the past
> three weeks eh?

I'm skeptical. In the history of the Israeli-Palestinian problem the light at the end of the tunnel has appeared often, only to reveal itself repeatedly as the proverbial oncoming train. It will be interesting to see what the "road map" looks like when/if it gets revealed.

> As far as the polls are concerned as of yesterday 70% of the U.S. is
> opposed to any more "premptive strikes" against anybody including
> Syria. Dubya is not going to invade Syria. Period.

Not today, sure. If he decides he needs to there will have to be a period of propaganda, ah, I mean explaining it to the American people to reverse those poll numbers. (Although, of COURSE the President doesn't make decisions based on polling data.)

Jon

I have been proceeding on the assumption that you are an educated person,
Vipul.

It's apparent am wrong in that regard.

While those items ARE of great importance, theya re far from being the
ONLY issues facing modern organized labor, including safety issues, health
care, education and training.

If thos items are the ONLY issues some union you are affiliated with is
interested in, then you are being grossly shortchanged.

>The job description is meaningless. It is rationalization, probably by BOTH
>sides. Go complain about a job description to a steward and they will not do
>anything about it. If something to do with your hours, they will help you.

Unions are SUPPOSED to be democratic bodies, that body made up of the
membership of the union. If your shop steward is not getting the results you
think you deserve, the represented members need to get rid of him.

>> And in the application of the words "radio amateur" within THIS peergroup,

Yes...HAM RADIO is understood to be persons who are licensed in the
Amateur Radio service.

I again challenge you to put "Ham Radio" in a search engine and then come
up with a reult OTHER than Amateur Radio.

>>BBWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA ! ! ! !
>>!

>
>Thats mature

I am sorry, Vipul, but I DO break out into open laughter when I read much of your stuff. You just don't realize what a fool you make of yourself in a public forum. You are the newsgroup equivilent of the guy slipping on the banana peel. The problem is you AIM for the banana peel!

>> Embarrassed that I can do something you can't and do it well?
>>
>> I don't think so ! ! !
>
>No, I'm embarrassed code lovers brag about such a skill and claim superiority
>because of it. I can do it. I'm smart enough to chose not to.

I've been a licensed Amateur Radio operator since 1972, Vipul, and have yet to meet ONE person who "claim(s) superiority" as a result of their proficency in Morse Code.

Not a one.

Are there people who are proud of it? Sure there are. Why not? But there are also people who are proud of being able to fly remote control airplanes, bake those large three-tier wedding cakes, or drive a Formula 1 car. So what?

As far as you being "smart enough to chose not to", all I can say is that YOU have conciously elected to NOT go any farther that No Code Technician (for now, anyway), and that if VHF and above is all you want, then you have succeeded in getting what you want.

Now, WHY are YOU conciously acting to denigrate and demean those who have chose to get what THEY want by applying themselves to the task at hand and meeting the requirements of the law to get there?

>Do you talk to people in "procedural signals". For example, when leaning a
>room, do you say "73"?

We are not "talking", Vipul. This is a digital domain. Yes, I would print "73 de K4YZ" if this were teletype, AMTOR, PSK 31, etc.

And I "lean" in a lot of rooms if I am tired enough. What does leaning have to do with what I say?

73 de K4YZ

Maybe where you are. Not in the entire field of engineering. Union
labor as a percentage of the workforce keeps dropping.

> The Engineers are non-union. By including more
> and more tasks as "Engineering" tasks, the union can be reduced.

Get the most out of a resource for the least $$. Management 101.

> NOTHING to do with "clarity".

Welcome to the real world.

I think I know what happend to you. It's a common enough occurrence
these days.

You went to EE school, took all the techno courses that appealed to
you and endured the other requirements. Learned how to analyze

circuits, did some projects, etc. Thought you'd be doing that sort of stuff every day.

Then you got an entry-level job and discovered that it's not like that in every "engineering" job, particularly the entry-level ones in a slow economy right after the dot-com and telecom balloons busted. Sorry, that's the way things are right now.

> >If a big enough group defines a word a certain way, then that's the

> No, that's how politics work.

It's how languages work. Particularly English. Definitions change and evolve over time, like the spam example I gave.

> Outside that group, the MAJORITY of people will
> disagree with those RE-definitions. The language has not changed - its
> application in this situation has.

Let's cut through all your BS and get right to the point:

Everyone except you defines "ham radio" and "amateur radio" as meaning exactly the same thing. No difference. Equivalent.

You want to define the two terms to mean different things. In addition, neither of your definitions for the two terms matches the definitions used by everyone else.

The cheese sandwich/2N2222 analogy went right over your head, too.
>
> >Would you call yourself a Professional Engineer?
>
> No, I would not.

That's good, because without that PE license, you ain't one.

> Here's why. In reality, I am a professional Engineer, in that

What ARE you talking about? "Sell out"??

> >>Another example is saying when something is "in use", it is useful.
> >
> >Why? If something has a use, it is useful.

By definition.
>
> You can use a toothpick(Morse) as a fork(communications mode). Its not ideal.

No communications mode is "ideal". Just like no eating implement is
ideal. A toothpick can be very useful for eating certain things that
would crumble under a fork.

> If many people did that it(Morse) would be used, but not useful.

Many people use Morse on the ham bands. It is useful.

Or are you going to redefine "useful"?

Last night I had a nice QSO on 80 meter CW with a ham in WPA. I was
running my homebrew rig and he was using a 3 watt kit rig from Small
Wonder. Great signals, lots of fun. Very useful.
>
> Do you still eat with your hands?

Sure.

>Maybe if you ate a cheese sandwich.

Or roasted chicken pieces in olive oil with garlic, rosemary and black
pepper. Or lots of other foods best eaten by hand.
>
> Contesting is spectrum squatting.

What is "spectrum squatting"?

> Eventually, commercial interests will
> petition to the regulators. If the ARRL's response is "we use it for contests",

Is there something wrong with having fun? Do you get mad every
Patriot's Day when the Boston Marathon is run, shutting down roads and
causing traffic jams so people can use a very old form of
transportation?
>
> >>Maybe
> >>useful to that person, but not to the amateur radio hobby.
> >
> >Would you outlaw contests?
>
> No. Contests do have some use. Its just not compelling enough if that all there

> is.

Contests are not all there is.

btw, contests do serve a technical purpose, particularly the big ones.
They serve as testing environments for equipment and antennas. All of
the weaknesses in a station will be exposed by a contest - which is
why some folks don't like them.
>
> >Your agenda seems to be redefinition of common terms.
>
> I like to experiment, homebrew. Most Hams <in my circles> do not like that.

Then get into different circles. There are newsgroups and reflectors
devoted to homebrewing and experimenting.

Do you know what a Tayloe detector is?
>
> >And one should not claim that there is any difference between "ham radio" and

Not by you!
>
> >73 de Jim, N2EY

>
> Codewords "73", "de" used.

Yep. Live with it.

73 de Jim, N2EY

Here's a poem by Mason Williams (best known for "Classical Gas").
Quite appropriate:

The Prince's Panties

Once there was a prince
Who acted strangely
In that he thought life was stupid
And it was, for him

So he made up a world
In which he liked the things we like
Except that he had different reasons
Why he liked them

He liked butter
For its color
He would order
"Toast and color"

Waitresses, confused,
Would utter:
"Sir, I've never heard of
Toast and color"

He'd get angry and
Begin to choke them
The law would come and
They'd arrest and book him

So his life was a mess of trouble
Still, he kept it up.

He had dogs
A hundred cocker spaniels
He called them "panties"
'Cause they did that lovely

He did not care that they
Would bark and fetch sticks
Run and jump, roll over
And play dead tricks

No he liked them only
For their panting
So he would
Run them ragged

But one day they got fed up
And chased the prince right up against a fence

And the prince was eaten by his "panties".

Tell that to the several states in which I am registered as a
Professional Engineer with an EE specialty. If you are in
California I refer you to the Business and Professions Code
that defines over a dozen specialties which require a PE license
to practice or to use the title.

In my wife's company, sorting and ordering of compenents, etc
is done by non-college-graduate technician-level personnel
called design assistants. Is that what you do?

Your statements show you to be a buffoon who has demonstrated a
profound lack of knowledge about EEs, CEs, and PEs and the
engineering profession in general.

Were you sleeping in the introductory college seminar on what
the engineering profession is all about or did you just play
hooky?

If you want to work for the company that I represent and sign
bids, plans and documents to be submitted to clients or to
governmental agencies, you had -better- be licensed as a
Professional Engineer or you won't get to do it. "Risk
management" a.k.a. lawsuit protection.

Ditto for my wife's company, the largest environmental
engineering company in the world.

That, my friend, is hardly -disrespect- .

I questioned the legality of this in an inquiry to both the
ARRL and the FCC. We will see what legal justification they
come up with for a military commander to authorize non-military
recreational communications on any frequency in contradiction
to standing procedures binding upon the military.

Not trying to be a smart alec here...but...since there is no actual
government....and the only authority seems to be the US Military....I see no
particular problem if the ham in question has a valid FCC license and the
commander gives him the authority. Isnt the CO the defacto licensing
authority in this case???

>sensibilities.
>

Your claim that I said "you lose your 5 wpm skill after learning 15 wpm" is
incorrect.

I acknowledged, that one does not lose your 5 wpm skill after learning 15 wpm.

I know this kind of thing does happen. It is a known condition. I (and others)
were shown to have had that condition, on occasion. However, I do not know
Morse code at 5 wpm or 15 wpm.

I assumed it also applied to Morse code. Others have told me it did not happen
to them. This could be because of their abilities, or because it does not
happen in the Morse code encoding scheme.

So, I concluded that I was wrong in my assumption that you lose your 5 wpm
skill after learning 15 wpm.

Both Ham radio and amateur radio are good.

For example, many Hams like to setup antenna, and are quite good at it. Antenna
setups can get technical.

I never said Ham radio is bad.

Amateur radio is somtimes referred to as a cult. When I mentioned I belonged to
Ham radio club to some non-Hams, they asked me if Ham radio is a cult.

"Usually, the spread of HAM radio, say the enthusiasts, is more through word of
mouth and passes on from one member of a family to the other. At times from one
good friend to another. This anyway makes the hobby prone to be called a cult."

Here is one of those statements that makes me wonder if this dude knows anything about rf at all! While working contests, I've worked people down the bands as the contest progresses. The different bands are all useful sometimes, and not so useful at others. Methinks Vipul might do well to take some time away from trolling rrap, and study a little propagation!

>> Simply contacting someone and exchanging callsign information is
>> not useful.

> exchanged by a contester is quite useful in achieving a higher score
> in a contest.

Agreed, Dave. Not knowing the similarities between contesting and emergency ops just shows ignorance of both.

Just so ya know Vipul:

Contesting gets people to dust off the rigs and make sure the antenna is up and working.

Contesting gets people to communicate across the country/world.

In pursuit of the score, it hones your operating skills, that is, you work stations that may be weak and hard to read. Good practice for real emergencies.

In real emergencies, people exchange information, just like in a contest. THe information is certainly more in depth, but so what? If you

don't get the information correct in the exchange, you don't get the score. In some contests, they subtract points. Accuracy is important in both cases.

So yeah, it is a game. But its practice for emergency ops too. And it's fun. So what? How many people would participate if it wasn't? In a real emergency, the person may be operating from a half charged car battery, be sick with dysentery or injury or worse, and have lots of other problems. But that doesn't matter.

Since we don't know where the next emergency is going to happen, if we have lots of people who are trained all over the country, there is a good chance someone will be able to help if disaster strikes.

As Linus said to Charlie Brown in "A Charlie Brown Christmas" "And that Vshah, is the true meaning of contesting!" (apologies to Charles Schultz)

>>
>>What taxes to fund the war?
>
>HAW! That's a GOOD one, Jon!

It doesn't seem that funny. We're having the war now, but taxes are
simultaneously going down even while spending on things other than
the war isn't. No US companies seem to be paying for this particular
war currently, it seems like that will be left for your grandchildren.

>How much of the federal budget, and the GDP is spent on defense in the USA?
>France? Germany? Japan?

In terms of GDP the US spends 3.2% on the military, France 2.6%, Germany
1.4% and Japan 1.0%. See, e.g.,

http://www.bartleby.com/151/a122.html

These don't seem like significantly high enough numbers to have much impact
on tax rates.

Do you know the corresponding numbers for foreign aid (speaking of some
government spending which *has* gone down a bit)?

>Yes, those countries have high taxes. They spend their tax money on other
>things, and then let the USA pay for their defense.

I can't figure out how France is having its defense paid for by the US
when it spends for its own defense only 20% less of its GDP than the
US apparently spends, by your assertion, to defend not only itself but
a bunch of other countries. As for the other two countries you mention, I
can't help but notice that these both have constitutions which were
established while under US military occupation and whose construction was
greatly influenced by the US, which prevent them from making large military
expenditures. It hence isn't surprising that their military expenditures
are smaller, but the suggestion that they chose to "let the US pay for their
defense" is kind of revisionist. At the time those countries weren't the
ones with the choices, the US was.

And as a case in point, note that it was only recently that the US
complained to its European allies about their lack of pulling their own

military weight, in particular with respect to the Balkans. In response the EU proposed immediately establishing an independent 65,000-troop "quick response force" from among its members to respond to combat situations which arose, along with a longer term goal of increasing and unifying their own capabilities with respect to missles and precision-guided munitions. The US reacted to this with a certain amount of horror since what they really wanted was for Europeans to devote themselves to peace keeping, post-conflict policing and logistics, dividing the labor to have the US do the combat while leaving support and the long-term cleanup of places like Kosovo to the Europeans. I don't think the US finds it in its own interest to have the EU, which collectively has both a GDP and a technological base which rivals the US, pooling its resources to reproduce the US military, so I think it is a bit unfair to turn around and critize those countries for not having reproduced the US military.

>So... since we never can get away from the code issue, are the Iraqi people >pro-coders??

My guess is that they would be quite proficient users of Morse Code, particularly the variation known as "prison tap code." You see, under the brutal regime of the late ex-dictator Saddam Hussein and his late bloodthirsty sons, many innocent Iraqi citizens most likely tapped out their final good-byes on prison walls just prior to being mercilessly slaughtered in some gruesome manner for the slightest perceived act of disloyalty, true or not. Somehow, I don't think Iraqis would be the kind of people to whine about learning something useful like the Morse Code.

Actually is not uncommon for amateur radio operators to do so. In every specialized activity, a specialized vocabulary is developed. The participants in that activity will often carry those terms into every day speech especially when engaged in ordinary daily social activities involving other members of the group.

But McVeigh was pretty much a lone wolf operation with only
a handful of accomplices. OBL takes things to a global
organization basis. Morally they are both evil scum, but OBL
is by far the worse and greter threat than a McVeigh type.

You are avoiding the realities. then. Either you believe we should support
Israel or you don't. The fact that our support of Israel leads some
to hate us doesn't change the reality of what you point to.

> >> Our support for
> >> repressive regimes also garners us no friends -- outside of those

We will obviously disagree then. As for CNN, we heard more about their
journalistic dishonesty today.

> indeed.

Amazing that we apparently have to accept a 50 year old act
as causing people to hate us. There have been errors in judgement
by administrations (both Rep and Democratic). Some of that
explains some of the hate...but not all of it...and the reality
of many today (as is OBL) is that they hate
the USA's freedom and success.

> The US motive for all this? Well, it was Britain that came up with the

Depends on how they manifest that interest. This is still
America and I have as much right to trash (your word) another
country as some of the Hollywood celebs have to trash Bush.
The difference is that I can accept you or anyone else labeling
me anything you want (war monger, Bush lover, whatever).
I don't play the victim gambit because others don't like my
opinions.

Fair enough, and I see far less US support of repressive/despotic regimes
now and in the future.

Let me give you an example of a cultural difference I can't accept.
Oppression of woman in many cultures is a gross human rights
violation. I personally won't accept that. I may have no say
in the matter, but I'm not afraid to tell anyone who would claim
oppression of women is a cultural thing that I shouldn't question
in some country.

Without debating any points, I belive we know there were
mistakes made. Hopefully, with the major anti-communist
cold war behind us, we won't see such errors in judgements.

>
> Not many of them have left Western Europe for the US lately, Bill.

One reason why is the immigration quotas. I have a friend from the
UK that took over a year to finally be able to move hear.

> It's

Thank you.

But that only answers the GDP part. I wonder how much of the federal budget in other countries goes to their militaries?
>
>These don't seem like significantly high enough numbers to have much impact
>on tax rates.

Not right away. But the debt continues to pile up.
>
>Do you know the corresponding numbers for foreign aid (speaking of some
>government spending which *has* gone down a bit)?

I don't know the numbers, but I bet they are but a small fraction of what is spent on the military.
>
>>Yes, those countries have high taxes. They spend their tax money on other
>>things, and then let the USA pay for their defense.
>

Yes. And those air operations are causing a growing rift in relations with Turkey. Turkey is right on the edge of walking away from us. An invasion of Syria could be that last straw. Continued aid to the Kurds could do it. Heck, at this point, even the wrong words by the President could do it.

That's the usual case, Dan. In N0IMD's case, he didn't think it
important to have the permission in writing for operating from Somalia.
He says he operated on a verbal OK.

It is amazing, isn't it? These people supported the Patriot Act, saying they "trust" the current Republican leadership. Even if one accepts total benevolence on the part of today's Republican leaders (very dangerous thinking), what about future leaders, both conservative and liberal? They will also have the powers granted in the Patriot Act - powers that could be used to crush opposition to any future government decision.

They also supported the creation of the Department of Homeland Security, saying they "trust" Secretary Tom Ridge. Again, even if you believe Tom Ridge is an angel sent by God (some conservatives seem to think that), what about future heads of this agency? We have no way of know who will be appointed to this position in the future or how that person will use the powers of this department.

> and that it's okay to run huge deficits. A few
> years ago, this same crowd was loudly arguing"

> country.

Conservatives also spent decades screaming about the evils of big government, only to cheer loudly as a massive new government department was created with a mandate to collect, and use, information about Americans. Most supporters believe the department will be used only to go after "those" people, with no visible awareness that this department can just as easily go after anyone - including those very supporters when the department is in the hands of their opposition.

Yep, right. Let me put it this way, the year (1992) I retired
early at age 53, I only worked six months that year and paid $28k
in taxes, which is probably more than you ever made in a year.

Since when did justice and freedom become the goal? I thought this war was about WMD, with justice and freedom just waved around to justify an invasion to find those WMD, Dave.

>> Most in the Iraqi military were not involved
>> in torture.
>
> And your source for that fact is?

And your source to dispute it is?

> Yup, the whole thing was scripted for jouralists.

Do you honestly believe journalists riding around on armored vehicles, accompanied by military public affairs personnel, is the way to get the whole unbiased story? Do you honestly believe created media events (such as a tank pulling down a statue) is full coverage of a conflict?

>> Bill, all we've seen are looters in the streets,
>
> So the looting was staged for the journalists?

Don't twist my words, Bill. You claimed the bulk of Iraqis are glad we liberated them. I respond that we had not seen or heard from the bulk of the Iraqis, only from a limited number, such as looters in the streets, Kurds in the North, and the participants of staged events.

> So? They were all targeted towards military
> and gvernment targets. They were very accurate
> too...or do you just ignore that.

How do you know that, Bill? Again, we've saw only a small number of bomb targets. Reporters are not yet free to roam around Baghdad, or other cities, to view the other targets. Indeed, the military could have leveled entire cities without any of us outside the military knowing about it at this point (or ever knowing about it if the military is successful at keeping it off the evening news).

> Do you think people don't understand the
> horrors of war? (snip)

Most Americans have never personally witnessed the "horrors of war."

It'd be hard to treat an enemy any particular way if we aren't in its country, Dwight. I can't agree with your thinking on this issue or any other in the thread. I think you claimed earlier to believe yourself a pretty conservative fellow. Your posts don't support that statement. I'm having trouble finding points on which we can agree.

Nope. I meant CM/RR. Those are the codes for the "commercial operator"
and "restricted radiotelephone" licenses. Our resident antagonist often makes
(non-germane) reference to his GROL.

Seems the FCC doesn't have him on file.

I also tried "AL", for "all", and of course we already knew the only
"Leonard H Anderson" in the Amateur database has allowed his license to expire.
Judging by the date of birth of the licensee, however, it was probably because
HE expired. (RIP)

>
<...>

Public service/emergengy service communications are not the only
justification of the amateur radio service.

47CFR97.1 Basis and purpose provides five rationales for the existance
of the amateur radio service: (1) a voluntary noncommercial
communication service, (2) advancement of the radio art, (3) advancing
skills in communications and technology, (4) expansion of the national
reservoir of trained operators, technicians, and electronics experts,
and (5) enhancing international goodwill.

If there are "freeloaders," it is the public service organizations that
routinely use hams for communications and fail to use the techniques
that sustain volunteer groups. Simple techniques such as a Thank You
and Certificates of Appreciation are too often forgotten by the
organizers. Repeated failure leads to a lack of volunteers.

Good on ya Steve!

You heard about the sailor who was asked why some Americans had very short hair by some exotic young ladies he called LBFMs? He told them it was because the MDs gave them a buz cut whenever they caught an STD cuz that grew out by the time they were safe to sleep with again. Well, that wasn't me. It was the swab who used to tell Marine shooters that the Air Force Team was cheating to give them a nice adrenaline boost going into a match.

FCC doesn't think so.

Y'know what's really embarrassing? When folks who consider themselves
"professionals" claim that a simple one-time 5 wpm code receiving test
is any sort of "barrier" to a license. Particularly considering the
accomodations available.

> When ads for Hamfests have Morse code keyers in it, and a non-Ham asks what

> Seems like you will try to find reasons for EEs NOT to homebrew.

I knew someone who said that homebrewing is "embarrassing to the hobby". This radio amateur claimed that most homebrew equipment looked crude, had a low level of workmanship and was usually far behind the 'state-of-the-art' for the application. This person also said that homebrew was embarrassing to the hobby because it made hams look like they could not afford manufactured equipment.

I disagreed with him, of course.

2742. Re: ARS License Numbers

Newsgroup: rec.radio.amateur.policy
Date: 2003-04-16 17:01:08 UTC
From: N2EY@AOL.COM
Message-ID: <c2356669.0304160901.1dcfb032@posting.google.com>
Source record: 64879

These are the number of unexpired FCC ARS
licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of April 15, 2003:

Novice - 34,822 (decrease of 14,507)
Tech - 253,394 (increase of 48,000)
Tech Plus - 69,835 (decrease of 59,025)
General - 140,662 (increase of 27,985)
Advanced - 83,771 (decrease of 16,011)
Extra - 103,814 (increase of 25,064)
Total - 686,298 (increase of 11,506)

Please note that:

- New Novice, Technician Plus and Advanced class licenses are no
longer being issued.

- Existing Technician Plus licenses are being renewed as Technician.

- Novices who pass Element 2 (Tech written) are upgraded to
Technician.

- Technicians who pass Element 1 (5 wpm code) receive a CSCE for
Element 1, and Tech/Novice HF privileges. However, their license class
does not change. Also, the CSCE expires after 365 days but they retain
their HF privileges.

- Anyone who can show that they once held a Novice class license
receives credit for Element 1, regardless of when the Novice license
was issued.

No problem. You've done the same thing whenever I brought up the fact that the FCC said, in 1990 and 1999, that the morse code test didn't prove anything to the FCC insofar as amateur licensing.

You had to step around that, avoid it, and make a big thing about the "treaty requirements." Tsk, tsk, tsk.

>> I meant having the test as a requirement is embarrassing to the hobby.

In article <3E9CAA87.2030406@psu.edu>, Mike Coslo <mjc5@psu.edu> writes:

Mike, tsk, tsk, tsk...you should have stayed with "wry" instead
of hitting the rye:

> Contesting gets people to dust off the rigs and make sure the antenna
>is up and working.

One has to do contesting to find that out?!?!?

> Contesting gets people to communicate across the country/world.

True, but do they need contests to do that? I don't think so.

> In pursuit of the score, it hones your operating skills, that is, you
>work stations that may be weak and hard to read. Good practice for real
>emergencies.

WHAT "real emergencies" need low-level operating skills?

Be specific there. Use ARRL newsletters for a reference.

> In real emergencies, people exchange information, just like in a
>contest. THe information is certainly more in depth, but so what?

"So what?!?" Real emergencies involve Loss of Life or
Possible Loss of Life.

Contesting doesn't have any mortal danger, despite the
peculiar fantasies of some contesters.

>If you
>don't get the information correct in the exchange, you don't get the
>score. In some contests, they subtract points. Accuracy is important in
>both cases.

If you are going to "equate" contesting with Real Emergencies
in such a flippant manner, then it's time for some psychological
counseling for you.

> So yeah, it is a game. But its practice for emergency ops too.

No, contesting is certainly NOT any "practice" for "emergency
ops."

Games have rules. Real Emergencies don't come with "rules,"
aren't announced ahead of time, and you may have to work with
a lot of OTHER agencies who DO plan, drill, practice for all kinds
of contingencies NOT in any game rule book.

>And it's
>fun. So what? How many people would participate if it wasn't?

Are Real Emergencies "fun" in your estimation? Have you ever
been IN one? Or do you get your Real Emergency news from
good old ARRL along with all the self-serving self-promotional
emotional pumping they do?

>In a real
>emergency, the person may be operating from a half charged car battery,
>be sick with dysentery or injury or worse, and have lots of other
>problems. But that doesn't matter.

"It doesn't matter?!?"

That's a weird as hell comment, Mike.

> Since we don't know where the next emergency is going to happen, if we
>have lots of people who are trained all over the country, there is a
>good chance someone will be able to help if disaster strikes.

MOST of the Real Emergencies that happen in the USA and most
of its possessions involve LOCAL communications, distances
within line of sight range.

Real Emergencies need liason with local authorities: Medics,
firemen, policemen, aid agencies. Real Emergencies don't have
rules or "point scorers." Real Emergencies need all involved to
work with other agencies for as many possible contingencies as
one can think of, and to be prepared for those that nobody could
foresee. Real Emergencies do NOT need expert, trained
morsemen to interface with other emergency agencies in a
local area. Real Emergency organizations don't give a damn
if you've appeared in three successive sweepstakes in the top
ten for three years running or have file cabinets full of QSL
cards. Real Emergencies don't have preplanned events and
you don't "score points" by thinking you are better than all the
other agency professionals...unless you train, plan, practice
WITH them.

Now quit all the fantasizing about contesting being the "same"
as emergency ops. It isn't. No points for you.

>Tell us how it tasted, Len. And why you went back for seconds.....;-)

Why should I tell any PLAGIARIST anything?

"No CW Test" was a screen name I used some years ago on America Online and for messaging in here. I haven't used that screen name for at least two years. AOL only reserves old screen names for six months. After six months anyone can use it.

You've used it here without any respect whatsoever, trying to ape the original screen name user. No supplementary ID at all. Just blatant COPYING of what another has done. In the media that is PLAGIARISM, boy.

You are without honor, without respect for acts of plagiarism.

>Back in my early days with the Rural Electrification Authority down in New
>Mexico, I had the job of bringing electricity to some of the larger Navajo
>outhouses and privies. They said it was the first time anyone had wired a

Shah isn't in California. If you check the California state law
of Professional Engineers and their licensing and titling, you
will find that corporations can very well, legally and honestly
call electronics engineers as engineers.

You and others were confusing "profession" with Licensed
Professional Engineers...or deliberately misdirecting the thread
in order to win message points in here. "Professions" are
applied to work done for pecuniary reasons. This whole
newsgroup is about AMATEUR radio, defined by federal
regulation as an activity without pecuniary compensation.

I'm not a Licensed Professional Engineer in any state.
Never been one. Didn't need to be. Several large national
corporations have titled me as an "engineer" quite legally
and honestly. Such "engineers" AND the Licensed
Professional Engineers get "respect" from other engineers
based on the work they do and how well they've done it.
The pecuniary compensation is okay as far as I'm concerned
but Licensed Professional Engineers need the protection
from state laws so that they can overcharge corporations
and afford the legal fees involved when they screw up on a
job (such as in the medical field and malpractice insurance).
All done legally and "honestly," of course.

Interesting that such Licensing laws were written by attorneys
at law for politicians. Attorneys at law also bill their clients
at rather high rates, don't they? Attorneys at law also like to
play lots of word games about law.

> Your statements show you to be a buffoon who has demonstrated a
> profound lack of knowledge about EEs, CEs, and PEs and the

> engineering profession in general.

Is this a newsgroup about Licensed Professional Engineers?

I thought it was about AMATEUR RADIO POLICY.

Unless there's been an overnight change in Part 97 or elsewhere
in Title 47, amateur radio is a radio activity carried out without
pecuniary reasons.

Amateur radio licensing is done as a regulatory tool by a federal
radio regulating agency. The FCC doesn't award "respect" by
amateur radio license grants. That's a fantasy self-promotion
by individual amateurs. License grants are regulatory tools,
not certificates of achievement.

Amateurs of any kind who confuse cheese sandwiches with
EIA registered transistor identifying numbers don't deserve any
"respect." Neither do those who confuse "talcum powder" with
"gravity."

Strange bunch of regulars in here who can't seem to focus on
the newsgroup general subject.

Doctor Killgore ought to try for additional medical formal training.
If he managed some college night classes he could complete
a pre-med degree within 15 years...then do the requisite
residency and maybe pass a state medical board to become
a real, honest Medical Doctor instead of playing out fantasies
of being an amateur "medical expert."

In case you haven't seen it, this newsgroup is about radio,
specifically about amateur radio policy. You are only licensed
as an amateur radio person, not a degreed Medical Doctor.

The "carpal tunnel" referred to is in the WRIST, not the hands.
That syndrome involves inflammation of the wrist area that
causes pressure on the nerve tissue also going through the
wrist area. You need to study your "Gray's" a bit closer
before spouting off like a medical guru.

Remember, this is rec.radio.amateur.policy, not guru.medical.
amateur.knowitall-extra.

That's load of nonsense, Jon. It wasn't "militarism" that caused those problems, it was dictatorial radicalism of the same Saddam mold. It TOOK a large dose of militarism to stamp it out. Militarism is no vice, rather a complete
necessity, as we learned by the middle of the 20th century. Be thankful that Hitler et al didn't have today's capabilities in 1940, when those Americans

like you joined their European counteparts in a vain effort to talk WW2 out of happening.

So just where do you think we'd be today if the Demos had been successful in totally downsizing out military in the past couple decades, as was done following WW1? Not a pleasant question to contemplate.

The term is "carpal tunnel syndrome".

Back when straight keys were in general use, "telegrapher's arm" or "glass arm" did afflict some telegraphers who used straight keys imporperly. (The right way wi with the wrist well off the table, and the whole hand flexing at the wrist. The wrong way is with the wrist down near the table and the fingers flexing.)

Horace Martin and others discovered that the condition could be alleviated or avoided by using a key that moves side-to-side rather than up and down. That's why sideswipers, bugs and keyer paddles are constructed that way.

Many times. The Germans were using burst keyers in WW2 to communicate with their U-boats. Some hams today use very fast computer generated and decoded Morse for meteor scatter work.

>What are the practical maximum human and
>computer speeds given a perfect fist?

Ted McElroy could typewriter-copy well over 70 wpm, and he was not alone. How fast he could head copy is unknown, but probably beyond 80 wpm. I knwo several ops who zip along beyond 50 wpm.

The practical limitation in computer Morse is the performance of the hardware and software. With dedicated hardware, almost any speed is possible.

In practice, however, there's the factor of radio conditions. Which is why even the early Baudot RTTY systems usually used FSK.

Me, too. Note the requirement for WRITTEN authorization.

It's interesting that the person who claimed the /T5 operation has not yet
answered these simple questions:

What callsign was used?
What rigs and antennas were used?
Who did the equipment belong to?
What amateur bands and modes were used?
What countries and continents were worked?
How were the QSLs delivered?

Betcha the folks operating/YI will remember the answers to these questions.

Hard to say. So many fun parts - the rrap net on 7037, with amateurs from all over the country checking in, that Field Day when the multi-club group used my call (which is how AC6XG found us), W3RV working 20 meters and filling up the log sheets after the band was pronounced "dead" by others, and coming across AC6XG in the process.

LOL!!

Who is a PLAGIARIST?

>
> "No CW Test" was a screen name I used some years ago on
> America Online and for messaging in here.

What a coincidence! :-O

I have read that you used
other screen names here.
Several of them. ;-)

> I haven't used that
> screen name for at least two years. AOL only reserves old
> screen names for six months. After six months anyone can
> use it.

So what's the problem?
You gave up the screen
name. Somebody else
picked it up. Why does
it bother you so much?

I'm not claiming to be you.

> You've used it here without any respect whatsoever, trying to
> ape the original screen name user.

They say imitation is the
sincerest form of flattery, Leonard ;-)

Why does it bother you if
someone models their posting
style after yours? Is it copyrighted?
Patented?

Don't you want to be treated the
way you treat others?

I'd think you'd be flattered.

> No supplementary ID at
> all.

Tsk, tsk, tsk.

Many of your posts that I have read
do not contain any supplementary ID.

There is no supplementary ID in your
post to which I am replying now.

> Just blatant COPYING of what another has done.

ROFLMBFAO!!!

I did not try to pass off any of your
original work as my own, Leonard.

I did not copy anything you or
anyone else wrote without attribution.

No one who reads my posts thinks that
I am you or you are me.

I do not think newgroup postings are
copyrighted.

> In the media that is PLAGIARISM, boy.

"BOY"?
That is a racial SLUR to many people.

It is also inaccurate in a literal sense. I am
not a boy.

If you met me in person, you might hesitate
to call me "BOY".

I would never call a stranger "boy". Why do
you?
>
> You are without honor, without respect for acts of plagiarism.

Where is your honor, Leonard? Why should
anyone respect you? You rarely, if ever,
show respect for others in your postings here.

You have not shown me any respect at all.

Poor baby....do you expect to get what you
do not give and have not earned?

>>Back in my early days with the Rural Electrification Authority down in New
>>Mexico, I had the job of bringing electricity to some of the larger Navajo
>>outhouses and privies. They said it was the first time anyone had wired a
>>head for a reservation.....
>
> You are also a racial bigot.

How do you get that from the joke?
I heard it from Mr. Phillips. Is he a
racial bigot?

I do not think the joke is racially
offensive to anyone. If someone
of Navajo or Native American
ethnicity is offended, I sincerely
apologize.

I'm not the one calling unseen
strangers "BOY", Leonard. You
are. In just the past few weeks
I have read you making fun of
the jobs, educations, military
services, nationalities and
many other features of people
who post here. You even make
fun of their names.

> No respect earned there, either.

That is correct. You have not earned
any respect from me. I am showing
you respect that you have not
earned. Maybe that is what bothers
you.
>
> If you wish to audition for the Comedy Store doing stand-up acts,
> I can tell Mitzi Shore you are coming. Neither she nor the
> audience cares for plagiarists who copy others' material.
>
You seem to be very upset by all this,

Leonard. Poor baby...tsk, tsk, tsk. ;-) ;-) ;-)

Just to show you I am a nice person,
Leonard, I'll just stop using this screen
name. After seeing how you treat
other people, I would not want anyone
to think I was you. :-P

What other screen names should I
avoid? Someone wrote that you
have used 'LenOf21', 'averyfine',
'averyfineman', 'MegHz', and
others. List all the screen names
that you have ever used so I won't
accidentally pick one of them.

Please try to be a nicer person,
Leonard. People might be nice to
you in return.

Bye-bye now. Say hi to Mitzi
and the gang for me.

It's nice to see an amateur atempting to squash the spirit of amateur radio.

Probably an attorney.

Thats how the EE field /IT phenom works in this country. I cannot go back in time and get that IT job that I don't like (I like EE stuff).

>But they DID choose it, and it WAS useful.

Those Hams chose Morse code, because the hobby pressures them to do so. Outside of Ham radio, Morse code is not useful.

How come these people come to Ham meetings asking for volunteers. The same groups come several times a year. Then, when I look in the paper to see the Ham volunteers mentioned, there is NO mention of Hams in articles about these events?

Morse code <testing> is embarrassing. <Part of> Ham radio can be a cult.

>>Amateur radio is somtimes referred to as a cult.
>
> Not by anyone other than you.

My friends at asked if "Ham radio, is that some kind of cult?". The paper I cited, said "This anyway makes Ham radio prone to be called a cult". This means alot of people believe Ham radio is a cult.

Apparently it is some kind of cult where physical activity is limited, beer and pizza are common, strange language is spoken, key tapping is common, anti-social people common, strange activites are held, and females are not present.

>Personally, I think you have taken your role model's lead and just keep

Leonard is quick to dismiss the military experiences of others,
preferring to draw on his own rear echelon experiences of fifty years
ago. Leonard doesn't play well with others.

No, you are the only person that has that point of view. Morse code and keyers are and always will be part of the hobby no matter what direction future regulations may take. It is no more embarrassing advertising these items than it is the radios or other amateur radio accessories and paraphenalia.

True.... I (my opinion only) think there is a "lethargy" in amatuer radio as a whole. 650,000 licenses out there?? ALL bands should be hopping, 24 hours a day, 7 days a week.

Every single one of us, no one excluded can do better to improve this hobby.

No that is not endorsing homebrewing or the lack of it. EE is a very broad field with room for people to pursue a variety of aspects. Some will homebrew and some will not. You are trying to force all EEs to homebrew, thus limiting them to your perception of EE.

The fact REMAINS, Vippy, that YOU have called Amateur Radio "embarrassing",
and you have called it a cult.

You have also stated that you support Amateur Radio in non-ARS forums.
Yet you have stated that you were "embarrassed" to identify yourself as an
Amateur licensee, and you have gone into the "rec.radio.cb" newsgroup on
several occassions and denigrated and demeaned Amateur Radio to members of
another radio service.

>>>Amateur radio is somtimes referred to as a cult.

I lost count years ago, Vippy, on the numbers of folks I have mentored into Amatuer Radio. Many as cadets from Civil Air Patrol, some from the Armed Forces. Several from social clubs I beleonged to while in Southern California. Several from a church group in Atlanta that used us to help with a walk-a-thon. Many of them are still licensed. I chat with several of them frequently

If you started "mentoring" two people a WEEK into an Amateur Radio license, Vipul, you might catch up to me in a couple years.

Might.

Uh huh. Inflammation of the connective tissue, Lennie, just like said, you scumbag.

And carpal tunnel DOES affect the hands. Perhaps a bit of REAL research on your part might enlighten you? Severe carpal tunnel can completely deny the patient even cursory use of the hands due to pain and inflammation.

Naaaaaah. Too easy to just spout off.

Typical Putz. Typical liar. Typical Leonard H. Anderson.

When the FCC revised the roles, didn't they make GROL's lifetime? Therefore,
he might have a GROL document that has an expiration date, but in reality, it
didn't actually expire.

Your concept obviously differs from mine. Dave. You said that weapon (MOAB) was deployed to Iraq to attack troops massed in open terrain. I pointed out that, according to the military itself, there were no troops still massed in open terrain when that weapon was deployed - only isolated pockets in towns and cities. You responded to that with the above.

That's because my conservative views don't extend to supporting endless wars. I'm fed up with wars. I've seen them my whole life (just about every five years or so). Enough is enough.

>
> And carpal tunnel DOES affect the hands.

That's an INDIRECT effect.

Grab your "Gray's" (common textbook on human anatomy known
by the short form of the title "Gray's Anatomy"). Research where
the carpal tunnel exists.

Everything except the outer skin layers goes through the "carpal
tunnel"...nerves, bone, ligaments, blood vessels.

>Perhaps a bit of REAL research on your part might enlighten you?

Two REAL Medical Doctors explained it to me, my regular
primary physician plus another doctor who was there and
handed over a text on it...with illustrations...not a Gray's.

I've never had that. Asked at the end of a routine visit since
a friend had that happen to her.

>Severe carpal tunnel can completely deny the
>patient even cursory use of the hands due to pain and inflammation.

Severe mental disturbance can make you imagine you are the
supreme god of information on everything. Stuff it, little man,
remember your professional level. You can't write "M.D." in
front or behind your name nor practice medicine in the manner

of a REAL physician.

Carpal tunnel syndrome is not a fatal disease. Nearly every
case can be cured by therapy and/or medicines. Some types
of mental aberrations are not curable.

> Naaaaaah. Too easy to just spout off.
>
> Typical Putz. Typical liar. Typical Leonard H. Anderson.

No lies. Anyone can get such information from REAL doctors.

Anyone can hurl insults as misdirection to avoid saying they've
been wrong. Robeson does that routinely in here.

even
>the early Baudot RTTY systems usually used FSK.

No, not at all, Jimmie.

Early RTTY systems of the 1930s era used FSK because that was the easiest way to get some kind of very fast keying on transmitters that couldn't do such fast on-off keying. The conventional HF transmitter used a separate "exciter" similar to an early ham separate VFO...although most commercial and military exciters used crystal control.

The early TTYs were mechanical marvels but all were designed for wired applications..."Baudot" or not. 5-level early TTY code is not strictly "Baudot." In wired applications the loop current can be 30 to 60 mA, bipolar (Mark in one direction, Space in the other). Polar relays were common then (SPDT contacts, center off). Contacts were not heavy-duty nor high voltage (typically a loop supply was 150 VDC at most).

FSK was fine and dandy, even with the wide spread (frequency difference of Mark to Space) of 850 Hz. No real hardware changes to those old CW transmitters, just the addition of an exciter, a low-power RF source.

Reception was no problem with an outboard FSK to TTY loop current converter. Better receive converters had AFC loops using mechanical servo tuning...some had separate Mark and Space loops to make certain neither was lost if the other end shifted their spread and/or drifted off frequency slightly.

One of the first-ever time-division multiplexers was through a USN contract input-output converter operating digitally but with small 7-pin miniature thyratron tubes as memory elements. Existing FSK exciters and receiving converters could handle switching rates about 4 1/2 times normal TTY switching rates of 60 WPM machines. The polar relays had to be exchanged for vacuum tube equivalents; not really a problem since the polar relays were big enough and plug-in, plug-out so that

adapters could be made to replace them. That time-MUX
was operational about 1952 with the US military.

Commercial and military SSB already had frequency multiplexing
through adapted wireline "carrier" equipment in the first (Dutch)
SSB circuit on HF. Such TTY had tone pairs and used AFSK.
Not a problem since the carrier bays had already been used on
wireline circuits and were proven. Up to 12 TTY circuits could
exist in a 6 KHz half of the 12 KHz bandwidth. That would be
halved when pairing of tone pairs was used to overcome the HF
phenomenon of "selective fading," one of the earliest methods
of error correction and not possible with single-circuit "morse"
telegraphy.

By 1960 the conversion had already begun to change from pre-
WW2 60 WPM machines to the newer 100 WPM machines,
both military and commercial. Newer machines used a 7-level
or 8-level coding (USA had 8-level, ten "bits" in all). The most
common USA 8-level coding scheme became known as
ASCII (American Standard Code for Information Interchange).
The FSK spread would narrow down to 170 Hz between
Mark and Space. FSK was kept with just a few channels of
TTY on an HF radio circuit.

"Early RTTY" used FSK for hardware reasons in the then-old
transmitters which had been designed for CW-only operation.
AFSK was used on TTY over SSB because the wireline carrier
equipment had already been proven and adapted easily to early
SSB.

Modern-day MODEMs can exist on a single PCB structure and
transceive at 56 KBPS rates over a bandwidth of about 2.8
KHz (easily fits on a POTS wireline circuit). 56 KPBS translates
to roughly 4800 characters per second of text (the remainder
are varied signals, may include FEC of various forms, housekeeping
bits, etc.). 4800 characters per second, taking 6 characters per
word is 800 words per second...or 48,000 WPM equivalent rate.

Coder-burst keyers for CW telegraphy typically did 300 WPM but
absolutely had to use some kind of recording device to hold the
received signal. No human can head-copy 300 WPM, let alone
"get it on paper."

I've actually operated what I described above. How is your
experience with "early Baudot RTTY?"

No, Lennie...It's direct. The aforementione process in the wrists does not cause dysfunction in the feet.

>Two REAL Medical Doctors explained it to me, my regular
> primary physician plus another doctor who was there and
> handed over a text on it...with illustrations...not a Gray's.

Uh huh.

>I've never had that. Asked at the end of a routine visit since
> a friend had that happen to her.

I DO have carpal tunnel, Lennie...A result of having to lift Tater when she was still with me. It's not fun. You awaken in the middle of the night with painfully numbing cramps in your hands. Wrist splints are required to help unless a carpal tunnel release is performed.

>>Severe carpal tunnel can completely deny the
>>patient even cursory use of the hands due to pain and inflammation.
>

I see. And YOU can...?!?!

BWWWHHHAAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA ! ! ! !

I am not the one claiming knowledge in a field or disclipline inwhich I have no documented experience or training.

I do not need to have "MD" in front of, at the end of OR the middle of my name, Lennie.

Why is it you feel YOU are qualified to discuss it, but a person who DOES help real physicians treat it and who himself has it is not?

I think it's just one more example of your inability to accept that someone who has, what YOU consider less training, knows more about ANYTHING than you do, Your Putziness.

>Carpal tunnel syndrome is not a fatal disease. Nearly every
> case can be cured by therapy and/or medicines. Some types
> of mental aberrations are not curable.

You do have a very practical experience with mental aberrations, Lennie, so I will defer to you in that regard.

As far as carpal tunnel goes, anti-inflammatories including steriods are the prefered choice of therapy. A carpal tunnel release is the invase procedure, is the last resort, but has a very high satisfaction/success rate.

>> Typical Putz. Typical liar. Typical Leonard H. Anderson.
>
> No lies. Anyone can get such information from REAL doctors.

Your lies are more subtle. Your putziness is not.

>Anyone can hurl insults as misdirection to avoid saying they've
> been wrong. Robeson does that routinely in here.

In this case, I am not wrong. Nothing I stated vis-a-vis carpal tunnel was incorrect. That you did not consider it "complete" (my choice to not delve into explict answers so as to appear as rubbing one's nose in my knowledge) is obvious.

Unlike you I do not need to jump on everyone else's "incomplete" or "misdirected" answers so as to appear as to be all-knowing or all-seeing.

Continue your putziness, Your Putziness. Back in the basket you go.

Steve

2819. At The End Of The Day

>He is a blowhard braggart
> who didn't get out of the USMC with an Honorable Discharge.

Why does Leonard H. Anderson find it necessary to make such brazen and obviously dishonest pronouncements in the face of facts to the contrary?

Could it be his penchant for pathological lying?

I think it is. But there's more...

I think it's because Lennie is a loser. Period. I have called him putz, His Lyingness, etc, but the very bottom line is, that despite whatever he THINKS he did in electronics, at the end of the day he's accomplished nothing, is appreciated by no one, and has no one "thanking" him for whatever he THINKS he accomplished.

I may never have a patent of my own or a house in the middle of one of the most heavily taxed regions of the United States, but then I don't care to have them. What I DO care about is that I made a positive impact on other's lives, and that I HAVE done.

People stop me in Kroger and tell me how well they or a family member are doing as a result of something I did or said, and they appreciate it. At the end of the day my kids say "I love you Daddy", and that makes it all worth it.

It's not bragging to say I am an Honorably Discharged United States Marine. It is a fact, one that can be verified via the VA. Lennie knows this but yet he persists in trying to perpetuate yet another of his blatantly false stories in order to glorify himself. Yet another attempt to embellish his own meager military service at the cost of others. Lennie has made a habit of embellishing his lackluster service at the expense of others, including a cowardly attempt to "polish his brass" behind the tombstones of US Army KIA's from the Korean Conflict.

And it's not bragging to say that I am a licensed aviator, nurse AND radio operator with over 30 years experience in PRACTICAL radio skills...Not only in "morsemanship", but in realtime, on-the-air operations. These are all facts. Facts that Lennie cannot stand.

Lennie can not claim any of that. Oh yes, he can cut-and-paste from a great many websites, including ones on medical and nursing topics, but at the end of the day, he's DONE none of it.

During his "career" in electronics, Lennie caused RF to be generated, but what did he do with it? Obviously making friends was low on the priority list.

So yes...at the end of the day when it's all said and done, Lennie is just a loser, and losers are a dime a dozen.

What a pity.

>
> The topic was Syria.

Sure it was, Dwight. The material you snipped indicates otherwise as
evidenced below.

Jon Bloom wrote:

"What do you think the US has been doing in the
northern no-fly zone over the past 12 years?
Their operations there allowed the Iraqi Kurds
to escape the control of the Baghdad government
and set up their own semi-autonomous government.
This was facilitated by Turkey since much of
the air operations over northern Iraq were
based in Turkey."

You replied:

"Yes. And those air operations are causing a growing rift in relations
with Turkey. Turkey is right on the edge of walking away from us. An
invasion of Syria could be that last straw. Continued aid to the Kurds
could do it. Heck, at this point, even the wrong words by the President
could do it."

Jon talks about the no-fly zones; you respond about the operations in
the no-fly zone and TURKEY. You might want to line up those ducks.

> (MOAB) was deployed to Iraq to attack troops massed in open terrain.

I wrote that because it is fact.

> I pointed out that, according to the military itself, there were no
> troops still massed in open terrain when that weapon was deployed -
> only isolated pockets in towns and cities. You responded to that with > the above.

I understand what a contingency is and I understand that the weapon was
not used in towns and cities. I asked you if you had a problem with the
weapon being deployed.

I'm trying to understand your hand wringing, Dwight but I find it
difficult. It looks to me as if you're grasping at straws.

Endless wars? I haven't seen any endless wars. The current war, called bogged down and stalled by "experts" was over in a few weeks.

>I'm fed up with wars. I've seen them my whole life (just about every >five years or so). Enough is enough.

I'm 54 and I've only seen part of one. I've read about some and I've seen TV coverage. I understand the necessity for war when diplomatic negotiations fail. Saddam Hussein thumbed his nose at the entire world for twelve years. U.N. pressure failed. U.S. pressure failed. Weapons inspections failed. Now Saddam Hussein's regime has failed.

Any of us watching television over the course of the past several weeks are well aware of the technological changes which have taken place. The discussion, if you remember, was about deployment of the MOAB, a Daisy Cutter on steroids. It was deployed for use in the event a large number of Iraqi forces massed in an area. Our military is ready for all situations. Deployment of a weapon does not mean that the weapon will necessarily be used.

These reasons have been OBE for some time. EE was the hot lick when I left Hi School. Colleges turned out 1000s but that wasn't enough. Then came LSI and with it "Lego Engineering", with a tiny few designing the Legos. EEs who didn't (90%) became programmers. The same technology made us Appliance Hams. I'm not going to spend $1000+ to build a rig that's almost as good as a Swan 350 when I can buy an IC706Mk2G for $725! Appliance hams don't need to know how to draw a Hartly or Colpits oscillator to write checks for new radios. Old timers may not like that but that's reality.

Same goes for operating. Morse proficiency was de rigure when turning a spark on and off was the only way to communicate and it remained a good idea when it was just the most efficient way; but now there are dozens of better ways including SSB and PSK31 and ....???

So, the need for a large pool of electronics experts who're proficient in Morse has evaporated into history; gone the way of the blacksmith and the well-digger.

Even our opportunities to provide EMCOMMs is disappearing. We provided backup for 'normal' communications, which often failed or were non existant. But now those 'normal' comms are at once more available and more reliable. People lost in the woods are more likely to whip out a cell phone than need a ham and police, fire and rescue comm's are so reliable that ARES/RACES teams have become like the proverbial appliance repairman on TV.

Get rid of the "service"? Naw, what's wrong with recreation?! My XYL derives a great deal of pleasure unwinding from a hard day programming the weapons you see on TV by chatting on her favorite nets and chasing DX. So do all the folks she chats with. If Disney can make big bucks off recreation and much of our public land is devoted to it, not to mention all the ball diamonds and soccer fields and swimming pools and rec

centers; why not part of our spectrum? IMHO, having fun is reason enough to do something - and the more people having fun the greater the reason to keep something. Speaking of fun ....

Wanna provide a public service? Get your club to set up a VHF station in an old folks home and train up some no-code techs to use it.

With all due respect, no past experience provides any expertise in how our military does or should operate because of the changes (OK, advancements) in weaponry and coordination. For example, a 'Nam Vet might hesitate to call in a B52 strike anywhere near his position because B52 fire control was designed to get nukes within a mile or so of the target. Now his equivalent can put a target in his crosshairs and punch a button; the designated GPS position is radioed to a B52 orbiting miles overhead and in seconds down comes a suitable bomb, selected based on target range, to strike within feet of the designated target. Pinned down by a bunker? Push a button and it goes away! Or imagine replacing a human Kamakazi pilot with "the terminator": a mindless machine that, shown a picture of a window in a building, flies his aircraft into it then detonates his bombs. Would y'all WW2, Korean, Nam, etc., make any op's changes if you'd have had these capabilities? The real problem is adapting fast enough.

B52s were not used in NAM for tactical air strikes. Their main function was
to carpet bomb bunker complexes and large area targets such as troop and
supply areas, and interdiction of various routes into S. Vietnam.

Your point is well taken on the many advances.

How many wars has Sweden fought in the last century? How many Swedish
casualties in WW2, Korea, Vietnam, etc.?
>
> >From what I saw in the Vietnam era, most of the anti-war protest was

>
> Most of them had ONE tour.

So?

They were THERE, Len. Fighting in Vietnam, and then they came home and
said the war was wrong.

> How many tours have you done?
>
I've done as many tours of duty in Vietnam as you have, Len. Zero. So
we're even.

Perhaps you should ask W4NTI or K8MN about their experiences. They
were there,
in the combat zone, when the Vietnam War was actually being fought.

> Let's cry great big crocodile tears and wail forever about Vietnam
> and awful WAR!

> Let's bring out minor examples and highlight them to "prove" that

So?

Does any of this justify the continued colony status of Vietnam after
WW2, when its people wanted independence?

> Research the
> distance from France to Vietnam and compare from the UK to
> North America. Did the French speak any form of Vietnamese
> when they took over than colony? Were they of the same
> racial background? Did they share a common history?

Why do those things matter? If anything, the cultural differences of
France and Vietnam argue for Vietnamese independence, not colony
status.

Tell us how well the French handled Algerian independence, Len.
>
> Segue to 1775 and the "English Colony" of the Americas.

Are you referring to the CRM-114 in the film "Dr. Strangelove"?
>
> Did the USA suffer any nuclear bombardment during the Cold
> War?

No. Nor did anyone else.

We also did not suffer any invasion of elephants. So the
anti-elephant-invasion paln worked, too. ;-)

> Was MAD successful in preventing wholesale
> slaughter of the "western" world?

Prove that such slaughter would have happened without the arms race,
Len.

> Did the USSR survive past 1991?

Not as a country. Which is worse, in a way, because there is more of a
chance that some of those weapons built for MAD will wind up in the
hands of those who are not deterred by the possibility of their own
destruction.

One reason MAD "worked" was that those "godless communists" did not
think that they would wind up in an afterlife paradise if they blew up
the world. Today we face opponents who are not deterred by that.

btw, the USSR suffered about 20 million dead in WW2. The country was
invaded and devastated in ways that make the Sherman's march to the
sea look like minor vandalism. The USSR was not told in advance of the
success of the Manhattan project.

Of course the incompetence and ruthlessness of Stalin, as well as the
inherent problems of collective systems, were to blame for many of the
deaths and much of the devastation. But after all that, it was
somewhat understandable if the Soviets were a bit paranoid.

Over a million civilians died in the siege of Leningrad. That's about
twice the entire number of American lives lost in WW2. That sort of
thing affects people a bit. Guess where young Vladimir Putin grew up.
>

Who is this "Gang of Four"? Any Vietnam Veterans in it? Anybody with
more military/government service than you? Anybody in life-critical
emergency medical care?
>
> How in the world did you get the idea that the USA "supported"
> Iraq since 1980?!?!? Iraq is oil-rich and has sold petroleum on
> the world market...is that "support?!?"

The USA bought the oil and sold weapons and weapons technology to SH's
regime. It was in all the papers. The main reason was that Iran and
Iraq were enemies.
>
> "Support" isn't defined as largely keeping a hands-off policy due

>
> Jimmie boy, I've already heard and seen those quoted individuals.

They back up my statements. Those leaders decided to stop the first
Gulf war short of removing SH in 1991, NOT the pacifists.
>
> You sum up the Gulf War(s) in the ultra-simplistic "it's all about
> oil!" and won't be corrected on it.

Without the oil, none of those countries would have the money to buy
weapons. Nor would they be of such concern to the rest of the world.
It's as simple as that.

> It's far more complex than
> that...but it's nice for you in trying to win message points. :-)

Tell us all about it, Professor...
>
> Have your years of experience in government affairs made you

>
> You are also a racial bigot. No respect earned there, either.

You've just used the term "boy" toward someone and you call him a racial bigot over the above joke? I'd love to know where you find the bigotry in the joke. Nothing demeaning at all was said about American Indians. Privies aren't a racial stereotype of the North American Indian. We have plenty of 'em in this state but we're a little shy of North American Indians. Use of the names of North American Indians isn't an indication of racial bigotry. The term "reservation" isn't an indicator or racial bigotry. I'll mark this down as yet another in a long line of baseless rants posted by you.

> If you wish to audition for the Comedy Store doing stand-up acts,
> I can tell Mitzi Shore you are coming. Neither she nor the

I didn't see a claim that contesting was the only way to find out.

> > Contesting gets people to communicate across the country/world.
>
> True, but do they need contests to do that? I don't think so.

I didn't see a claim that it requires a contest for that to happen.
They do provide an excuse for it to happen, much like a hamfest provides
an opportunity for hams to get together, swap yarns, pick through junk
and eat generally bad food.

> > In pursuit of the score, it hones your operating skills, that is, you
> >work stations that may be weak and hard to read. Good practice for real
> >emergencies.
>
> WHAT "real emergencies" need low-level operating skills?

What low level operating skills? What do you know of contesters'
operating skills?

> Be specific there. Use ARRL newsletters for a reference.

Be specific. Call upon your vast experience in amateur radio contesting
as a reference.

> > In real emergencies, people exchange information, just like in a
> >contest. THe information is certainly more in depth, but so what?
>
> "So what?!?" Real emergencies involve Loss of Life or
> Possible Loss of Life.

Our ARES group participates in mock prison riots. We haven't figured
out how to arrange a real prison riot. That and we no longer have an
operational prison in the area.

> Contesting doesn't have any mortal danger, despite the
> peculiar fantasies of some contesters.

Practice makes perfect.

> >If you

If you're going to dismiss the value of contesting in honing operating
skills in such an arrogant manner, it is time for you to seek new
sources of information for your mental database.

> > So yeah, it is a game. But its practice for emergency ops too.
>
> No, contesting is certainly NOT any "practice" for "emergency
> ops."

Is this more from your vast experience in amateur radio contesting?

> Games have rules. Real Emergencies don't come with "rules,"
> aren't announced ahead of time, and you may have to work with
> a lot of OTHER agencies who DO plan, drill, practice for all kinds
> of contingencies NOT in any game rule book.

We haven't figured out how to arrange a real prison riot, a real tornado
or a real flood for practice purposes. Field Day and drills will have
to do for most of us. If you'd like to drop by, we can arrange to leave
you in Wildcat Hollow so the gang can practice looking for a lost
person. It would be, from your perspective, fairly realistic.

> >And it's
> >fun. So what? How many people would participate if it wasn't?
>
> Are Real Emergencies "fun" in your estimation? Have you ever
> been IN one? Or do you get your Real Emergency news from

You always resort to something like this in an effort to dismiss the
skills of another or to take a shot at the ARRL. You surely do know a
lot for a guy who isn't involved in amateur radio.

> > Since we don't know where the next emergency is going to happen, if we

> >good chance someone will be able to help if disaster strikes.
>
> MOST of the Real Emergencies that happen in the USA and most
> of its possessions involve LOCAL communications, distances

> within line of sight range.

Not all emergencies happen in the United States. Not all of those which do take place in the United States involve local communications. As you've told us, real emergencies don't have rules. You use what you need or what you have in dealing with an emergency.

> Real Emergencies need liason with local authorities: Medics,
> firemen, policemen, aid agencies. Real Emergencies don't have
> rules or "point scorers." Real Emergencies need all involved to
> work with other agencies for as many possible contingencies as
> one can think of, and to be prepared for those that nobody could
> foresee. Real Emergencies do NOT need expert, trained
> morsemen to interface with other emergency agencies in a
> local area. Real Emergency organizations don't give a damn
> if you've appeared in three successive sweepstakes in the top
> ten for three years running or have file cabinets full of QSL
> cards. Real Emergencies don't have preplanned events and
> you don't "score points" by thinking you are better than all the
> other agency professionals...unless you train, plan, practice
> WITH them.

SOME real emergencies involve liaison with local authorities. Some need liaison with state or federal authorities. Some don't need liaison with any authorities. If you decide to come to participate in our Wildcat Hollow lost person scenario, you might as well leave that cellular phone at home. They don't work in Wildcat Hollow.

> Now quit all the fantasizing about contesting being the "same"
> as emergency ops. It isn't. No points for you.

Quit pretending that you know all about contesting and amateur radio's part in emergency efforts. You don't.

That's one each for the bear shooter and the bull shooter.

That brings up an interesting point. Weren't you the guy working safely
in the rear area during the Korean War who felt compelled to tell us
about they flying time for a Soviet Bear bomber to reach Tokyo? If I'm
not mistaken, that'd give you both the bear shooter and bull shooter
crowns.

>It looks like someone is using it.

Hmmmmm...first Lennie starts berating whoever has reactivated his
"NoCWTest" nomme de guerre, (there never WAS a "CW" test anyway...), then he
openly admits that "anyone" can use an inactive screen name after six months.

Seems to me he's got nothing to gripe about.

>> You've used it here without any respect whatsoever, trying to
>> ape the original screen name user. No supplementary ID at
>> all. Just blatant COPYING of what another has done. In the
>> media that is PLAGIARISM, boy.

No...PLAGIARISM is taking the works of another and claiming it as your
own...The current "owner" of "NoCWTest" has done no such thing.

>I've never heard of a case where three words run together constituted
>plagiarism. It looks more like an exerpt from some of your work.

For sure! And I think Lennie should be dodging lightning bolts for his
assailing another about "honor".

Leonard H Anderson is one of the most cowardly, lying, dishonorable creeps
I have ever known.

His attempts to embellesh his own military service by associating himself
with Army KIA's in Korea was absolutely disgusting. There are more vile and
evil things in the world (murderers, child molesters, etc), but after them,
Lennie's right up there.

Since one can change both the pitch and volume of the side tone on a radio to the individual needs of the operator, morse would be easier to hear, once the operator is trained, than voices. It is a simple on/off scheme with variable duration (i.e. dots and dashes) rather than the variable volume, pitch, modulation, etc of the human voice. Also the human voice tends to fall right at the same pitch as the background noise.

Not disappearing but changing. We are no longer needed for the little, personal disasters like the ones you cite. However read up on the communications situation following the World Trade Center Disaster. Phones, both regular ones and cell phones, were either out completely or there were long delays in getting through. Part of this was due to the loss of equipment when the World Trade Center collapsed and part was due to overload of the system since it was designed to handle average communication levels with only a small margin for increased traffic. None of our public communications (telephone, cell phone, etc) or public services (police, fire, etc) have sufficient equipment to handle the communications needs for large scale disasters. Taxpayers won't foot the bill for the extra capacity that would be unused the majority of the time. This is the void that ham radio will continue to fill well into the future.

Even natural disasters (hurricanes, earthquakes, tornadoes, etc.) still cause sufficient breakdown or overload of normal communications that the assistance of hams will be badly needed.

I know...

> "Early RTTY" used FSK for hardware reasons in the then-old
> transmitters which had been designed for CW-only operation.

I don't believe you.

> AFSK was used on TTY over SSB because the wireline carrier
> equipment had already been proven and adapted easily to early
> SSB.

Sounds like a snowjob.
>
> Modern-day MODEMs can exist on a single PCB structure and
> transceive at 56 KBPS rates over a bandwidth of about 2.8
> KHz (easily fits on a POTS wireline circuit).

Not easily. The wire circuit must be of sufficient quality. And that's not a
radio circuit.

Have you ever operated a 56 kb modem over an HF radio circuit 2.8 kHz wide?

> 56 KPBS translates
> to roughly 4800 characters per second of text (the remainder
> are varied signals, may include FEC of various forms, housekeeping
> bits, etc.). 4800 characters per second, taking 6 characters per
> word is 800 words per second...or 48,000 WPM equivalent rate.

I know. First year EE stuff.

> Coder-burst keyers for CW telegraphy typically did 300 WPM but
> absolutely had to use some kind of recording device to hold the
> received signal. No human can head-copy 300 WPM, let alone
> "get it on paper."

Really? Is speed all that matters to you?
>
> I've actually operated what I described above.

Way back in the early 1930s, Len? Before you were even born? Were your diapers
made from old chadless paper tape? ;-)

You operated all of the above? I think you EXAGGERATE.

Or did you just operate some of it? Maybe just the modem?

When did you allegedly operate the high speed Morse burst keyer?

> How is your
> experience with "early Baudot RTTY?"

I have some. Including 60 wpm and 100 wpm Baudot FSK RTTY machines in the early 1970s. Less than three decades ago.

I have far more experience with RTTY than you have with Morse code.

Which statements?

From my reading of the FCC's statements on the need for Morse code TESTING, the FCC thinks that there is no longer any need for Morse code testing other than meeting the requirements of ITU-R S25.5. FCC said, in effect, that they don't see any significant difference in the on-air behavior of non-code-tested vs. code-tested hams. In other words, they don't think reducing or dropping the code test would cause any more rules violations that we have now.

>When the FCC revised the roles, didn't they make GROL's
>lifetime? Therefore, he might have a GROL document that has an
>expiration date, but in reality, it didn't actually expire.

Not so. The license-holder still had to renew if the license
had an expiration date but for convenience the FCC computer
generated lifetime certificates for every valid license holder
as of January 1, 1985. There was a one-year "window" to turn
in the old certificate and get the lifetime certificate from the
office that last issued the license. After that, a "renewal" would
result in a card-form license which is all that is issued today, and
failure to renew or request the certificate would result in not being
licensed past the expiration date.

The latest renewal date for a Radiotelephone Operator license
would have been in 1990, five years after the lifetime license
went into effect.

The only ways to let the license lapse in 2000 would be to either
send it in to the FCC with a request to cancel it, or have it
taken away by a suspension or revocation order issued by the FCC.

polar relays and I might start acknowledging you thought
you knew something about TTY loops. :-)

>There were high speed Morse transmitters back in the 1930s and earlier. Your
>story does not compute. I don't believe it.

You refuse to believe the truth.

Look it up in the "Collins SSB Book," known by the official book
title of "Single Sideband Principles and Circuits," by Pappenfus,
Bruene, and Shoenike, McGraw-Hill 1964. Most of it is in the
first chapter on radio communications history overview.

>> Reception was no problem with an outboard FSK to TTY loop
>> current converter. Better receive converters had AFC loops
>> using mechanical servo tuning...some had separate Mark and
>> Space loops to make certain neither was lost if the other end
>> shifted their spread and/or drifted off frequency slightly.

>I know.

No, you don't. You've never worked in commercial HF comms
or have any experience in anything but simple amateur radio
stations.

>> One of the first-ever time-division multiplexers was through a
>> USN contract input-output converter operating digitally but
>> with small 7-pin miniature thyratron tubes as memory elements.

>Probably 5823s if they were cold-cathode or 2D21s if hot cathode. Or their
>military equivalents.

Irrelevant factoid. You've never used one of those "Muxes"
or have any idea of how they sound through a conventional
HF receiver. Describe the whole Mux in detail and I'll see
if it compares to the photo I took of one in operation.

>> Existing FSK exciters and receiving converters could handle
>> switching rates about 4 1/2 times normal TTY switching rates
>> of 60 WPM machines. The polar relays had to be exchanged
>> for vacuum tube equivalents; not really a problem since the
>> polar relays were big enough and plug-in, plug-out so that
>> adapters could be made to replace them. That time-MUX

>> was operational about 1952 with the US military.

>And these units cost how much?

More than you could afford in the 1950s. :-)

>> Commercial and military SSB already had frequency multiplexing
>> through adapted wireline "carrier" equipment in the first (Dutch)
>> SSB circuit on HF. Such TTY had tone pairs and used AFSK.
>> Not a problem since the carrier bays had already been used on
>> wireline circuits and were proven. Up to 12 TTY circuits could
>> exist in a 6 KHz half of the 12 KHz bandwidth. That would be
>> halved when pairing of tone pairs was used to overcome the HF
>> phenomenon of "selective fading," one of the earliest methods
>> of error correction and not possible with single-circuit "morse"
>> telegraphy.

>Sounds like you are merely repeating what I wrote earlier.

Jimmie is CONFUSED. I repeated what *I* wrote earlier. :-)

Jimmie, you've never used a commercial 12 KHz BW SSB
transmitter in your life. Get over it.

>Previously you wrote that 100 wpm was the minimum speed used for the past four
>decades. Now you're saying the conversion had begun by 1960.

Both apply. You want to misdirect by leading off on a tangent
for some EXACT DATE.

I really don't care what hams did in RTTY four decades (plus minus)
ago. Most that they could afford was surplus 60 WPM machines.

Stop to think of WHY they were "surplus." They were surplus
because they were REPLACED...by the higher-rate TTYs.

>I know...

>I don't believe you.

>Sounds like a snowjob.

No matter what job, educational level, employer, or
government/military service that any newsgroup opponent has,
if said opponent fails to honor and revere Miccolis's views, they will
be the target of his arrogant insults, ridicule, name-calling, put-
downs, denigrations, and gross exaggerations of Miccolis's self-
importance and experience...not to mention puerile pique.

>Have you ever operated a 56 kb modem over an HF radio circuit 2.8 kHz wide?

Yes...one specifically designed for radio.

>> I've actually operated what I described above.

>Way back in the early 1930s, Len? Before you were even born? Were your diapers
>made from old chadless paper tape? ;-)

No matter what job, educational level, employer, or
government/military service that any newsgroup opponent has,
if said opponent fails to honor and revere Miccolis's views, they will
be the target of his arrogant insults, ridicule, name-calling, put-
downs, denigrations, and gross exaggerations of Miccolis's self-
importance and experience...not to mention puerile pique.

>You operated all of the above? I think you EXAGGERATE.

>Or did you just operate some of it? Maybe just the modem?

No matter what job, educational level, employer, or
government/military service that any newsgroup opponent has,
if said opponent fails to honor and revere Miccolis's views, they will
be the target of his arrogant insults, ridicule, name-calling, put-
downs, denigrations, and gross exaggerations of Miccolis's self-
importance and experience...not to mention puerile pique.

I have far more experience with RTTY than you have with Morse code.

Are you STILL snarling or have you taken lessons?

No matter what job, educational level, employer, or
government/military service that any newsgroup opponent has,
if said opponent fails to honor and revere Miccolis's views, they will
be the target of his arrogant insults, ridicule, name-calling, put-
downs, denigrations, and gross exaggerations of Miccolis's self-

>adapting fast enough.

Agreed, Vito.

Problem in here is all the PCTA *refusing* to adapt.

Morse code is well on its way to extinction as a communications
mode in the larger world of all radio. The only place it still lives
is in amateur radio where morsemen insist and insist is a
"requirement" for an amateur radio license having below-30-MHz
privileges.

Maybe the morsemen are confusing themselves with "greenies,"
the environmentalists who insist on protecting certain species
by law? That would be asking for federal welfare to support their
minority viewpoint...or the federal government to formally
recognize the Archaic Radiotelegraphy Society.

>> who didn't get out of the USMC with an Honorable Discharge.
>
> Why does Leonard H. Anderson find it necessary to make such brazen and
>obviously dishonest pronouncements in the face of facts to the contrary?

Obviously Stevie hasn't begun his mental therapy yet.

Stevie wrote in here that he left the USMC on a medical discharge.
Later he "amended" that to say "it was changed to an honorable."

That's very rare in the armed forces of the USA.

Poor lil Stevie goes on...

>
> Could it be his penchant for pathological lying?
>
> I think it is. But there's more...
>
> I think it's because Lennie is a loser. Period. I have called him putz,
>His Lyingness, etc, but the very bottom line is, that despite whatever he
>THINKS he did in electronics, at the end of the day he's accomplished nothing,
>is appreciated by no one, and has no one "thanking" him for whatever he THINKS
>he accomplished.

Tsk, tsk, tsk. Stevie IMAGINES too much...

IMAGINATION is not the same as "thinking."

> I may never have a patent of my own or a house in the middle of one of
the
>most heavily taxed regions of the United States, but then I don't care to have
>them.

"Heavily taxed?" Property taxes on the southern house are almost
half of that of the northern house in the 10 acres of woods near
Tacoma, Washington.

>What I DO care about is that I made a positive impact on other's lives,
>and that I HAVE done.

Wonderful. Then you came in here and threw it all away...

> People stop me in Kroger and tell me how well they or a family member are
>doing as a result of something I did or said, and they appreciate it. At the
>end of the day my kids say "I love you Daddy", and that makes it all worth it.

Suggestion: Take up some Remedial English night classes and
write for Reader's Digest magazine. They love that kind of copy.

This newsgroup is about AMATEUR RADIO POLICY, not super-
markets, interpersonal relations with neighbors (on non-radio
matters), or family matters.

> It's not bragging to say I am an Honorably Discharged United States
>Marine. It is a fact, one that can be verified via the VA.

National Archives and Records Agency in St. Louis is a better
place. NARA. They have the official version.

I've never checked NARA for Stevie's records. He said FIRST he
had a medical, then later backtracked to say it was "amended"
to honorable.

As to "bragging," Stevie's own words claim:

SEVEN HOSTILE ACTIONS

He hasn't referenced those or established any bona fides for that.
He hasn't described any of them in sufficient detail of any sort.

If anyone else said so, they would have this "seven hostile action"
hero all over their case. Evidently "hostile action" heroes have
some sort of divine blessing to be HYPOCRITES. :-)

>Lennie knows this
>but yet he persists in trying to perpetuate yet another of his blatantly
>false stories in order to glorify himself.

Hmmm...myself AND others have called Stevie on his claims,
Stevie didn't answer with any believability, but he says that
"others" are lying?

That's not just illogical, it is insanity.

>Yet another attempt to embellish his own
>meager military service at the cost of others.

I don't "embellish" anything of my military record. All that I've said
in here is verifiable through third-party, disinterested sources.

Eight years of military service isn't exactly "meager." It involved
HF radio communications on a big scale. Not only is that
verifiable, Eugene Rosenbaum (N2JTV, now living on Long
Island, NY) served in the same unit doing the same thing.

Cost to others? As an E-5 overseas, I got the glorious sum of
about $154 a month. That cost taxpayers about 12.3 microcents
a year each!

>Lennie has made a habit of
>embellishing his lackluster service at the expense of others, including a
>cowardly attempt to "polish his brass" behind the tombstones of US Army KIA's
>from the Korean Conflict.

Poor baby...imagination working overtime again. Google has the
archives, Stevie.

I HONORED the 23 killed from the 71st Signal Service Battalion in
the Korean WAR. Stevie can read about it in the Pacific Stars &
Stripes for 10 November, 2002. It's on-line, with pictures, searchable
there at www.estripes under "Hardy Barracks."

> And it's not bragging to say that I am a licensed aviator, nurse AND
radio
>operator with over 30 years experience in PRACTICAL radio skills...Not only in
>"morsemanship", but in realtime, on-the-air operations. These are all facts.
>
>Facts that Lennie cannot stand.

I usually SIT during newsgroup sessions. I could stand up to do it
but the keyboard is rather fastened to its little sliding shelf, ideal
for sitting operation. Standing and bending over to reach the keyboard
is uncomfortable, therefore I do not stand while operating the computer.

Stevie needs to tell ALL, not just a part of what he "has."

Stevie is licensed as a PRIVATE PILOT. That isn't commercial,
it certainly isn't military. Stevie's list of aircraft he has flown are
all in the "light" general aviation category.

Stevie is a civilian nurse, not a doctor, cannot practice medicine
like a REAL medical doctor. My sister-in-law is a licensed nurse,
a wonderful person but doesn't claim to be any kind of medical
"expert."

Stevie's "radio license" is for AMATEUR RADIO...as is nearly
all of his "30 years operating experience." Amateurism.
"Practicality" limited to allocated amateur modes/modulations
which are a tiny part of all those available to the rest of the radio
world.

> Lennie can not claim any of that.

True. I cut short my private pilot lessons for economic reasons.
I've never had any desire to be a nurse. I've never tried to get an
amateur radio license, just got a commercial license, one as a
First Class Radiotelephone Operator.

I spent a career working IN electronic engineering since late 1956,
first as a Senior Lab Technician, then advancing on to being a

Senior Staff Engineer responsible for all phases of design and
production of radio-electronic hardware. Stevie hasn't done a
single thing in that area...the closest he got was as a purchasing
agent for a short time (less than a year) in some middle-sized
corporation making modems, LANs, and set-top boxes.

>Oh yes, he can cut-and-paste from a
>great many websites, including ones on medical and nursing topics, but at the
>end of the day, he's DONE none of it.

I'm not licensed to practice medicine. Neither is Stevie (nurses
cannot do that in lieu of a licensed physician).

Medical and nursing topics are not prime requisites for discussing
amateur radio policy, are they?

>> During his "career" in electronics, Lennie caused RF to be generated,
but
>what did he do with it? Obviously making friends was low on the priority
list.

Oh? :-)

Allan Walston, W6MJN, an old friend, was best man at my wedding.
Jim Hall, KD6JG, is an old friend and our host at his beautiful home
in central California in 2001...he was my immediate-level manager
at RCA Corporation and later a senior staffer at Rocketdyne where
some of us migrated to after RCA Corporation was dissolved.

My list of friends is rather large, but few of them are licensed in
amateur radio. Stevie would never ever make that list. :-)

> So yes...at the end of the day when it's all said and done, Lennie is
just
>a loser, and losers are a dime a dozen.

I'm retired. So is my wife. Together we have nice residences and
a comfortable income, no debts, no mortgage. Our respective
health conditions are rather good. That's priceless.

> What a pity.

...for Stevie.

>used to being shot down with words by now.

Not even scratched, big-time "combat vet shooter." :-)

What does your alleged "combat vet" experience have to do
with amateur radio policy?

You weren't ALSO "saving a whole brigade in 'Nam with your
trusty PRC-25," were you?

How about "behind enemy lines in 'Nam sending intel back
via CW?" Before 1973, that is. :-)

Where are your bona fide references to all this "combat"
experience? Engraved on your tongue? Or did you read
about it in Pacific Stars & Stripes and wish you were in
infantry in the jungle instead of being a USAF type hauling
stock boxes around at a supply depot?

Did you go AWOL in-country to seek out and destroy charlie regardless of your military assignment? Not good, that. Not very diplomatic. Did State check up on your resume thoroughly or did you flumox them also with fast talk and arrogant air?

NARA probably has your REAL military record on file. You aren't worth the effort to message them or spend the postage.

>he might have a GROL document that has an expiration date, but in reality, it
>didn't actually expire.

Dieter, it's not important to Robeson about the actual existance
of any license, only that he can attempt to score message points
in here to avenge his self-perceived message wounds.

I tested for a First Class Radiotelephone (Commercial) Operator
license at an FCC field office in Chicago in March, 1956, passed
all four parts of it, received the certificate two weeks later and
kept renewing that until the FCC regulations made all the
Radiotelephone (Commercial) licenses into a single class, the
General Radiotelephone Operator License. That became a
non-renewable or "lifetime" license...at a time when the FCC
decided that such licensing wasn't really of much value in
regulating US civil radio.

A problem existed in here with Stevie some time back when
I sent him several scans of my First Phone certificate. He
refused them (in public) although no one can know if he ever
opened one of the several scans to actually see it. He really
doesn't want to accept factual information that interferes with
his fantasy du jour.

The last time I had to legally use that license was back in
1984. That's a whole 19 years ago. Just the same, I was
ON HF just a few months ago, communicating on SSB from
a sailing vessel in a marina harbor in Ventura. Didn't need
to sign any forms or get "permission in writing." :-)

There are very few instances where anyone "must" be
licensed to transmit RF above incidental radiation maximums
on government contract projects to develop such systems.
Indeed, I don't think there are any, although some rare
exceptions might exist.

A problem in here seems to be all the olde-tymers still hanging
onto old standards, old practices, old regulations, old ways
that disappeared along with their youth. None will remain, yet
they NEED all the status, rank, privileges of the old US amateur
way of life in order to Lord it over others. That may be the only
thing they have left in life to show their imagined superiority
over others.

> The FCC has no jurisdiction in this matter.

News for you - the FCC can take action against a FCC licensed amateur licensee who violates radio regulations in a foreign jurisdiction if those regulations can be tied to an international treaty binding upon the US, such as the International Radio Regulations or the Telecommunications Convention.

>Got a news flash for you. The U.S.
>Military right now IS the authority in Iraq. Meaning, the
>military command can authorize anything.

More news for you - there are standing orders and procedures binding upon all branches of the military as to when and where they may use non-government frequencies (amateur radio springs to mind) both inside and outside the US and for what MILITARY purposes. IIRC amateur frequencies may be used for MILITARY operational communications only.

Ham radio is not a military purpose, and my inquiry is whether the local commander has NOW been given the authority to authorize non-military communications unilaterally (they didn't have it when I did frequency coordination at the FCC).

"The military command can authorize anything" plays well on TV shows like JAG or Wings of Gold, but not in real life. There's LOTS of bureaucracy above the level of the local commander for non-military actions.

Only if the "book" has been changed to give him/her unilateral
authority to authorize non-military recreational radio use
(i.e. ham or CB radio) by members of the military - emphasis on
the non-military use.

IIRC they did not have this authority when last I worked in that area
of frequency coordination, hence the inquiry.

Let's see what they say now......

Amazingly I have to agree with "Len over 21". His commentary of RTTY and Multiplex (Mux) operation is top shelf...and CORRECT.

Been there, but not to his extent.

You weren't debating. Why'd you snip your "debating technique in
replying, Leonard. Here you are in this one with the "Herr Robust",
"Gang of Four" stuff. You can't avoid fulfilling what the N2EY profile
says you do.

Well, little doubt about why *you* were a jarhead.

I don't see any "anti-military crap" in the above quoted post.
What I do see is a mistaken idea that the FCC has anything to
do with

1) The US Government (military) use of radio spectrum
2) Use of radio spectrum outside the US
3) ARRL's regulation of it's DXCC award.

The simple fact is that a military commander on foriegn soil
can do whatever his superior officer says he can do. That is
indeed just exactly what an army is for.

In article <XSEna.2655$Hy1.430028@newssvr28.news.prodigy.com>, "Dee D. Flint" <deehays@qix.net> writes:

>Even natural disasters (hurricanes, earthquakes, tornadoes, etc.) still
>cause sufficient breakdown or overload of normal communications that the
>assistance of hams will be badly needed.

Dee, I'd suggest you review some REAL disasters such as past earthquakes.

I've been through three very noticeable ones in the Los Angeles area, from 1971 to 1994. In the latest one, the Northridge Earthquake, ALL the primary power for an area of 10 million urban residents was suddenly gone...due to a fallen MHV tower that caused all local electric power stations to trip off the Pacific Intertie. That one happened at a bit after 4:30 AM on January 17, 1994.

LAPD and other cities' PDs functioned okay within minutes, having the plans, preparations, equipment for such things. LAFD and other cities' FDs functioned okay within minutes since they were similarly ready...all the engine companies rolled their vehicles, a standard drill even with small quakes. PDs and FDs all have leased landlines for intercommunication and alerting, planned that way. They can, and did function and roll to fires started by the quake. I witnessed one such from my backyard, very easy to see and hear (only a mile distant) in the dark stillness of the morning. All the area's PDs and FDs have VHF-UHF radio sets, many capable of operating on several frequencies for local netting.

Local hospitals all had emergency power, visible working evidence seen by various pools of light springing up in otherwise total darkness. That's a code, by the way. Local hospitals and local ambulance services are already netted together using VHF-UHF radios. Those nets work in conjunction with PDs and FDs.

Utility companies would bear the brunt of the most work in the immediate aftermath of the quake. They are also radio-equipped and netted-in. Utility headquarters have the telephone capability to call in their workers through the telephone system without being tied up in the crush of startled ordinary subscribers. It isn't known but is a fact that traffic overload on telco switching centers stops ordinary subscribers from calling out...doesn't stop certain subscribers from calling through to individuals. They could also use supervisors' autos (radio-equipped also) to individually alert

their workers by direct contact at their residences.

The Greater Los Angeles Emergency Center was already built and staffed in Center City area of L.A., was quickly activated with full staff as soon as they could arrive. They coordinated all the nets, including the nets which had no normal intercommunication and with such companies that did construction work on streets and buildings, various city agencies for utilities and aid needed for temporary housing, food, water.

The electric power people had a tough job, too, bringing an area of 10 MILLION back on-line from a complete power blackout. Such is called a "black start" in the power business and is NOT a normal thing. They had to both phase-in all the individual power companies to the Intertie and bring up various neighborhoods one by one to avoid the phasing problems. Except for damaged neighborhood feed systems, the entire area was back on-line by late afternoon.

Larger businesses and corporations helped in the communication problems through use of radio-equipped vehicles. That was also planned into the emergency preparedness. There was quite a bit of structural damage to buildings and roadways plus some ruptured gas pipelines on fire. While it taxed the available resources, those resources did come through from planning, organization, and drills.

In the early morning there was temporary shelters put up and the first wide-scale deployment of the FEMA video message board system (a fly-in system) in two local Valley locations. Those video bulletin boards provided instant readable H&W messages to/from locals and distant loved ones.

Some amateur radio local nets would have been useful, I'm sure, but the existing infrastructure of many agencies managed without them. There was no evidence in the local news media (all the radio and TV stations had their own emergency power) that amateur radio emergency teams functioned during the quake's first week.

I think you might have taken a direct hit, non-combat vet, bull shooter
:-)

> What does your alleged "combat vet" experience have to do
> with amateur radio policy?

Every bit as much as your military expertise as a non-combat type safely tucked away in Japan during the Korean conflict.

> You weren't ALSO "saving a whole brigade in 'Nam with your
> trusty PRC-25," were you?

No, I wasn't. Then again, I never mentioned brigades or PRC-25's. I never used any small QRP gear or any equipment in that frequency range.

> How about "behind enemy lines in 'Nam sending intel back
> via CW?" Before 1973, that is. :-)

> Where are your bona fide references to all this "combat"
> experience?

They'd be in my records.

> Engraved on your tongue? Or did you read
> about it in Pacific Stars & Stripes and wish you were in
> infantry in the jungle instead of being a USAF type hauling
> stock boxes around at a supply depot?

I never hauled stock boxes and never visited a supply depot.

> Did you go AWOL in-country to seek out and destroy
> charlie regardless of your military assignment?

No. Where'd you come up with such a simple notion?

> Not good,
> that. Not very diplomatic. Did State check up on your
> resume thoroughly or did you flumox them also with fast
> talk and arrogant air?

The federal law enforcement officers assigned to the Bureau of Diplomatic Security do a very thorough background investigation on each Department of State applicant. Updates to that BI take place at least every five years. Now, don't you feel like a complete fool?

> NARA probably has your REAL military record on file. You
> aren't worth the effort to message them or spend the postage.

I'm sure they do. I'm not sure they'd release it to Leonard H. Anderson but you can try if you can't control your curiousity.

If it makes them feel younger, that's a good thing.

After all, the only difference between men and boys is the price/size of their toys ;-)

So what if it's old? The English language is old, and the alphabet we use with it even older.

Sailboats have been around for thousands of years. Are sailboats bad because they use an older technology?

> to have to do so?

A number of the warlords fought the Taliban tooth & nail after the
Afghans booted the Soviets and they're still into the effort. Does the
phrase "Northern Alliance" ring a bell? The reality of the matter is
that the history of Afghanistan going back to the days of the Mongol
hordes which invaded Afghanistan is a litany of failed attempts
internal and external to transform Afghanistan into a coherent nation
for any length of time. The numerous implications should be obvious.

>
> Wasn't your complaint that they wouldn't participate?

No, my complaint was and is that NATO wouldn't have done a thing about
the problem if we hadn't led them by their noses. In other words they
would have sat around and "discussed" the problem to death intstead of
getting it solved and Milosovic would probably still be in power if
we'd just sat back and let them deal with it. Gets tiresome.

National doctrines are are not incidents and are forever unless
retracted or squashed, the Monroe Doctrine is still as valid today as
it was the day it was laid down.

> > You'd rather
> > Sweden & Belarus had a UN mandate to patrol our back porch?
>
> Why should anyone be patrolling it?

Start with the mess we'd have on our back porch today if we hadn't put
the clamps on Castro in 1960.

> Why did we need to foster a coup to
> eliminate the democratically elected government of Chile in 1973, for
> example?

Because Allende (sp?) was taking Chile toward Communism which was
clearly a threat to our hemisphere and our interests. Monroe Doctrine
again. We sank the Communist thrusts to overtake the fragile French &
Italian democracies after WW2 with dollars, we sank 'em in Chile with
the CIA. Same war, shifting fronts. In the end we won.

> Reject what you will, but that international adventurism of the past --

> people, some times it was not.

A very few and for the most part in a bunch of bush-league banana
republics.

Balance of powers in action: Dubya asked for $80bb for the war, all of
it for use at his discretion. Congress sed, "No George, here's a $15bb

slush fund for you and that's all you're getting." And they damned
near gave the rest to Colin. Yeah, the system works.

> > Based in their own sordid thousand year history of periodically mauling

It ain't happened yet, I guess that's "substantial" enough . .

> For that matter, how long as it
> been since we attempted (with success) to conquer and occupy the Indian
> nations?

Spare me willya Jon? Pick up on this one and harpoon me with it.

During WW2 the authorities locked up native born Japanese-American
citizens on the West Coast by the thousands for years without due
process.

Here's another harpoon for ya: Jefferson the Father of our
Constitution which proclaimed equality and justice for all had slaves.
How 'bout Tommy's DNA-documented cavorting with his pet slave between
the sheets? A relationship which was public knowledge back then . . .
Hell, Slick Willy was a nocode in comparison to The Father Our Nation.
A lousy blow job on the way home from work and a silly lie about it
and Willy almost got himself impeached. Yeah Jon, things have changed.

There ya are, now get it outta yer system.

Yes, our American ancestors did some awful things. By today's
standards. But in most instances not by their standards in those days.
The problem you're having is that you're not factoring in the enormous
changes in our thinking and values as a nation since those days as a
result of the political and ethical evolutions we've experienced.
Which are ongoing to this moment. Dredging up examples of crap we did
in Panama a hundred years ago has little or nothing to do with to do
with what we would do if we were in the same situations today.

> Are any of the European states that tried to invade one another operating
> today under the same form of government as they were at the time?

> recognize that their concern is based on experiences we've never had.

90% +/- of the generation which lived thru the horrors of WW2 let alone WW1 have passed away, few if any of the members of their current leadership had clue one abt what was going on around them then as kids. Putin was born seven years after the end of WW2. He and most of the others "lived" thru nothing more "brutal" than the Cold War.

And I second Dick's comment on this one.

And here they come again today:

Dubya: "OK, now lift the sanctions so that reconstruction can get underway".

Control Freaks: "We're really sorry George but we can't lift the sanctions until we have control over reconstruction".

In other words screw the Iraqui innocents who need the sanctions lifted right now.

This could be a the last straw.

> > The Kyoto Treaty debacle comes to mind here. To hell with 'em, let 'em
> > sink in their own socialist PC swamps.

>
> I don't understand that, Brian. If you were ambivalent about the war, wh
> would their opposition make you FOR the war? On the surface, it sounds
> like petulance.

Uh-huh. I'm really well known for my petulance. I explained it before. It became obvious that SH could very well have gone on thumbing his nose at the sanctions for another twelve years if we didn't step in. Note the terrorists our military has glomed in Iraq after SH swore Iraq didn't have anything to do with supporting terrorists and terrorism.

> That wasn't my question. Was war the ONLY way that could have been
> accomplished?

Yes. Per the demise of Hitler, Mussolini, Tojo and some lesser & later
demons here and there.

> that probably having both Sharon and Arafat out of the picture would make
> it easier to find a solution (I'm paraphrasing). I'd settle for just
> having Arafat gone, though.

That would certainly be in the right direction. If I was Dubya I'd use
some of my new $15bb slush fund to "treat" the whole Likud bunch to an
all expenses paid one-year tour of the Falklands to get 'em outta the
way so that those who didn't win a berth on the trip could cut the
deal with the Palestinians.

What contingency? Do you honestly believe our military felt the Iraqi soldiers were going to come running out in mass from the towns and cities they were pushed into, with only the MOAB to save our war? Nonsense.

> (snip) and I understand that the weapon was not
> used in towns and cities. (snip)

No, it wasn't. But the conflict was not over when that weapon was deployed, or when I first commented about that deployment. Regardless, the conflict is over, so continued discussion is rather moot - the military will have to wait until the next conflict to try out their new toy.

> I asked you if you had a problem with the weapon
> being deployed.

I thought that was fairly clear. In a war we justified by pointing to Iraq's supposed indiscriminate weapons of mass destruction, absolutely.

> I'm trying to understand your hand wringing,
> Dwight but I find it difficult. It looks to me
> as if you're grasping at straws.

There is no "hand wringing," Dave. I simply believe it is my right as an American to publicly ask questions about our military's intentions. Why the hand wringing over that?

Ahh, I missed this in the original post. I AM hearting impaired, I have overall major hearing loss, and several 100 db holes in my hearing (that was the estimate from my testing). I have tinnitus in both ears, a different frequency in each. I depend on closed captioning, and I read lips. My hearing problems are just about untreatable, so I live with it.

Tough! I passed the test, just like everyone else, putting on the headphones and doing it. It took me longer to learn Morse code that the average person, but so what? I wear headphones, and can work every mode - thought I frighten the XYL with how loud I turn it up. One day she actually came in and asked me if I wasn't worried if I'd make myself deaf listening to it so loud. My reply was "DUH", and she was pretty red-faced.

Too many whiners these days!

From (N2EY)

>>Secondly, Dee has came up with several reasons why many EEs don't homebrew.
>>Seems like endorsing that EEs should not homebrew.
>>
>Only to you. Dee and I were explaining, not advocating.

Listing several reasons why is advocating.

By the way, I counted calories today. I ate <a little over> 2,600 calories
today.
With this many calories, how could I say I "counted" calories?

Easy - at the end of the day, I noted what I ate, and "counted" it by adding up
the number of calories each food contains. It came out to be over 2,600.

No buffet today. (Otherwise, how could I calculate the number of calories I
ate?)

Yes, I did the math right. No, I'm not overweight (Nor am I very tall to be
able to eat that much).

I was just "explaining". I do not advocate that one do the same.

Tomorrow I'll have a HAM and cheese sandwich.

Steve, has contacted me off-line. Very general and extremely vague
about one (not seven) possible deployments to the sandbox in the late
70's (to my knowledge) through the 80's until Desert Storm kicked off.
I know what the AF referred the operation, but don't know that it has
been declass. Live munitions and all.

That leaves at -least- 6 unexplained hostile actions.

Grin away, it only makes you look simple.

You said a military commander cannot authorize ANY amateur operation. Hmmm?

Keep grinning from ear to Rear ... as you are shown to be wrong.

Take it up with GW and Tommy if you've got a problem with it.

In K8MN's case, he said that no military commander can authorize any
amateur radio activity. Just ask him if he said that. He will
confirm it.

Look, Dwight, the northern no-fly zone was being discussed as it
effected both Turkey and Syria. I commented upon it. I provided the
quotes which you earlier snipped. Damned if you didn't snip them again.

I'll let you get back to your hand-wringing.

>Multiplex (Mux) operation is top shelf...and CORRECT.
>
>Been there, but not to his extent.

Thank you, Dan. I think you did more than you mention.

You did military communications. The methods changed
by the time I got my Honorable in 1960. TTY was still the
mode of choice for written communications for the next
decade-plus.

In 1963 the USAF took over the entire HF, torn-tape relay,
microwave linking from the US Army at what had been ADA.
USAF had its own HF comm nets going and expanded what
had been ADA. Few of the old WW2 equipments stayed
around and more high-power SSB (12 KHz BW) was added.
More Muxes were added to the control center and USAF
started conversion to 100 WPM TTYs. Message throughput
increased with USAF handling both the Army and AF comm
needs. By 1978 USAF gave land and buildings back to the
Japanese...end of an era.

Field radio morphed from GRC-26 huts into Troposcatter and
the combo wireline-radio radio-relay systems used in Vietnam
(at least three varieties). By the start of the first Gulf War the
field communications resembled a digital data exchange and
the Model 33s had given way to data terminals and line
printers plus local message group storage in disk. With the
start of operational use of the SINCGARS in 1989, the old
PRC-77s gave way to low-VHF frequency hoppers, something
quite complete by Operation Iraqi Freedom. About a quarter
million SINCGARS radio sets had been made by March 2003,
most by ITT, Fort Wayne, the rest by General Dynamics Land
Division (now disbanded).

The military communications scene of today is VASTLY
different than in my time of service, yet so few hams know of
it or even how it was back in the first half of the 1950s. Still,
what was used before WW2 was carried through to post-WW2,
including TTYs for majority of all military messaging done in both
periods. In all periods thereafter, the military communications
methods are extensions of the old systems, modernized and

even transmuted into much more golden methods in both
hardware and software. It's kind of shame that such information
isn't carried through to radio amateur publications.

I'm grinning. You'd be the simple one. I have documentation for each
of my operations from foreign soil.

> You said a military commander cannot authorize ANY amateur operation. Hmmm?

Did I?

> Keep grinning from ear to Rear ... as you are shown to be wrong.

I didn't allege that I had permission to operate an amateur radio
station from Somalia. You did.

> Take it up with GW and Tommy if you've got a problem with it.

Why? Did either one of them bootleg from Somalia?

A few in here have their "gotta get it in writing" erection fully deployed.

Until there is public record of ALL 7 hostile actions BY the military,
all of the claims are just claims and vaporous BS.

...and that's just the way it stands.

You've never worked in commercial HF comms
or have any experience in anything but simple amateur radio
stations.

Had you actually done any, you would have talked about it. You
didn't. At most you mentioned some amateur radio stuff, nothing
more.

>> Irrelevant factoid. You've never used one of those "Muxes"
>> or have any idea of how they sound through a conventional
>> HF receiver.
>
>How do you know?

Had you ever done that, you would have remarked on it. You
didn't and don't.

>No, I'm simply pointing out inconsistencies in your postings.

Nope. You've got your pique all in a dander and are searching
for a way in to a misdirection and argument.

You've never done commercial HF communications in your life
outside of ham radio and you certainly did NOT do any
military communications. You were never in the military.

No matter what job, educational level, employer, or
government/military service that any newsgroup opponent has,
if said opponent fails to honor and revere Miccolis's views, they will
be the target of his arrogant insults, ridicule, name-calling, put-

Here you go, Brian. These quotes might jog your memory about what took
place.

From: Dave Heil (k8mn@earthlink.net)
Subject: Re: DSP vs human decoding of OOK CW
Newsgroups: rec.radio.amateur.policy
Date: 2002-08-01 11:42:56 PST

"Is it a lame assertion if your operation doesn't count toward DXCC and the "authority" granting you permission to operate had no right to do so? Surely you knew that as a self-proclaimed moral and ethical man that your actions were neither moral nor ethical."

From: Dave Heil (k8mn@earthlink.net)
Subject: Re: "...one step closer to extinction."
Newsgroups: rec.radio.amateur.policy
Date: 2002-08-03 06:20:14 PST

"No, I say that a commander might grant authorization which is not his to grant. I say that higher-ups might not approve of such authorization. I say that the DXCC desk might not credit such operation. What has the DXCC desk said about your operation from Somalia? Have you found if it counts or not?"

From: Dave Heil (k8mn@earthlink.net)
Subject: Re: "...one step closer to extinction."
Newsgroups: rec.radio.amateur.policy
Date: 2002-08-09 22:05:19 PST

"Ah Ah, Brian. I've questioned whether your commander had the authority to do so. I've also asked if you obtained "written permission". So far, you've just played dodge ball with the question. I've repeatedly asked if your operation was accepted for DXCC credit."

It's only a small issue since the message we've seen about GI's operating from Iraq requires written permission. Obtaining writtern persmission never crossed your mind during your time in Somalia.

Thanks for the giggles.

Dave K8MN

>can do whatever his superior officer says he can do. That is
>indeed just exactly what an army is for.

Not under the current "circumstances" that Prsident Bush sent the Armed Forces into Iraq for, Floyd.

He SPECIFICALLY and REPEATEDLY stated that our "sole" purpose was to depose SH and "liberate" the Iraqi people, and to allow them to take control of their own detiny and country.

While as a Ham I am excited about the prospect of seeing more activity coming from the Middle East, as a US Citizen I have to be concerned that our business in Iraq is OTHER than what the President stated.

An Army is NOT for the purpose of usurping international law. Indeed, we have entered Iraq under force of arms for the stated purpose of UPHOLDING the law, to wit the UN mandates for the disarmament of Iraq.

So...Do we beleive our leaders, and then expect them to do what they say? Or do we "believe" it until it doesn't suit us any longer?

>Stevie wrote in here that he left the USMC on a medical discharge.
> Later he "amended" that to say "it was changed to an honorable."

Lennie has his "facts" wrong...again.

Sorry Lennie...it's been "Honorable" from Day One. oua re free to ask the
VA about it, if you care.

>Wonderful. Then you came in here and threw it all away.

No. It recycles every day. That's the beauty of it.

>This newsgroup is about AMATEUR RADIO POLICY...(SNIP)

You may stuff it, Your Impotentness. Everyone here sees how you adhere to
your own "direction" on newsgroup content. Usual "Do What I Say, Not Do What I
Do" rhetoric.

More lying from somone whose experience should make them one of the most
trusted...Not most humiliating...

>I've never checked NARA for Stevie's records. He said FIRST he
> had a medical, then later backtracked to say it was "amended"
> to honorable.

Sorry Lennie. I never "backtracked" anything.

>I don't "embellish" anything of my military record. All that I've said
> in here is verifiable through third-party, disinterested sources.

The only thing in here that's "disinterested" is you...Disinterested in
facts...Disinterested in truth...Disinterested in honor.

>I HONORED the 23 killed from the 71st Signal Service Battalion in
> the Korean WAR.

Sure you did...AFTER you got caught trying to polish your brass on them.

Coward.

>Stevie is licensed as a PRIVATE PILOT. That isn't commercial,
> it certainly isn't military. Stevie's list of aircraft he has flown are
> all in the "light" general aviation category.

And nothing is anything other than what I stated...Just facts,
Lennie...verifyable facts.

> Stevie is a civilian nurse, not a doctor, cannot practice medicine
> like a REAL medical doctor. My sister-in-law is a licensed nurse,
> a wonderful person but doesn't claim to be any kind of medical
> "expert."

One more opportunity for Lennie to "quote" where I EVER said I was a
"medical expert". Of course we'll add it to the pile of OTHER opportunities
Lennie has been provided to "disprove" what others have stated, but has failed
to do.

>Stevie's "radio license" is for AMATEUR RADIO...as is nearly
> all of his "30 years operating experience." Amateurism.
> "Practicality" limited to allocated amateur modes/modulations
> which are a tiny part of all those available to the rest of the radio
> world.

Sorry Lennie. You're a day late and a dollar short again.

>> Lennie can not claim any of that.
>
> True. I cut short my private pilot lessons for economic reasons.

Yet you profess to know more than I in matters of practical aeronautical
navigation. The other day you insisted that CAP is flying T-6's, and demanded
to know what aircraft I am current in. I told you and asked you what aircraft
YOU are current in.

You failed to repsond.

Another grand exclusion, I am sure.

> I've never had any desire to be a nurse.

Thank God. Now if we could just get rid of HMO's...

> I've never tried to get an
> amateur radio license, just got a commercial license, one as a

Dave, that's nice of you quote yourself -after- your education of operating from a country without a government. Your first pass at it claimed a commander had no authority to authorize anything to do with amateur radio.

Keep giggling, it makes you look even more simple. Better yet, why not go work some more Frenchmen (out of band) on 6M?

Right. You knew nothing about operating from any country without a
government.

> > Take it up with GW and Tommy if you've got a problem with it.
> >
> Why? Did either one of them bootleg from Somalia?
> >
> Dave K8MN

You were proved wrong on your assertion that a military commander could grant permission to operate amateur radio. After your education concerning amateur operations from a country w/o a government, you had to rephrase your accusations. So if you still don't like commanders having that authority, take it up with GW.

Len states that he was stationed in Japan, and Huffy calls him a REMF.
Huffy then makes claims that he is/was a warrior, but cannot
reference any of it. Dave can only clip and past others remarks, and
is somehow making a positive contribution.

What is your stated goal here?

Phil, if you wanna play at all, you've got to get yourself in the game.

Go enlist, then volunteer for Iraq.

Which book is that, Phil?

These guys are not within the civil jurisdiction of the United States right now. The US Government has made it very clear that no US flag is to fly over any US controlled areas of Iraq.

With the exception of the guys in the Navy, they are clearly NOT on the high seas.

The Un-tied Nations is NOT in control nor responsible for the civil infrastructure of Iraq pending elections.

That being said, it can only come down to one choice...And that is the Armed Forces command structure. Appropriate WRITTEN authorization should be obtained, this being necessary to know who's-doing-what and can be reigned in when the civil authority of Iraq is re-established.

However if the military DOES assume this responsibility, how are they going to regulate it? Non-Amateur "LT Smuckatelli" doesn't know what "priviledges" any given class of US license grants, ergo will there be any attempt to issue callsigns ala AMRS in Japan and Korea?

Part 97 clearly delineates where it has jurisdiction, and I do not see "foreign territory that recently got it's butt kicked by the Armed Forces of the United States" anywhere in there.

No doubt you do, Phil. But the only US civilians with ANY "authority" in Iraq right now are the President and Secretary of Defense. I doubt that an FCC staff lawyer would get a whole lot of anyone's ear right now or in the future.

I'd also not want to be an FCC lawyer trying to enforce US civil law on US citizens NOT within the territorial jurisdiction of the United States.

Not at all. We chose it because we like it. Lots of fun.

Last night I had three QSOs on 80 meter CW. One DX (S58A, pounding in at 8:30 pm local) and two ragchews with amateurs in RI and MI. Great fun.

>Outside
>of Ham radio, Morse code is not useful.

Incorrect.

Outside of amateur radio, Morse code is not very useful. Inside amateur radio, Morse code is very useful.

>
>Listing several reasons why is advocating.

Not at all. I think it would be great if more hams homebrewed and experimented. But there are reasons why most hams don't.

btw, building a kit is not homebrewing. Neither is converting surplus or fixing up older equipment. I have never claimed that any of my kit, surplus or restored rigs were homebrewed.

>
>---

That's about right if your size and level of physical activity requires that much. For most people, that's simply too many calories.

>With this many calories, how could I say I "counted" calories?

You did both - ate and counted.

>
>Easy - at the end of the day, I noted what I ate, and "counted" it by adding

Exactly.

Note that if you keep eating that much, and don't burn it off with physical
activity, you'll get fatter and fatter. Which has serious health consequences.

Doesn't answer the question. You're just repeating yourself.
>
> Had you actually done any, you would have talked about it.

Incorrect. Unliked you, Len, I don't use this newsgroup to mention everything
I've ever done outside amateur radio. In fact, I don't talk about my work here
very much.

> You didn't.

> At most you mentioned some amateur radio stuff, nothing
> more.

Doesn't prove a thing, len. You're presuming your conclusion.

Just because someone doesn't talk about something doesn't mean they haven't
done it. For example, not everyone named in a patent grant tells everyone about
it.

>>> Irrelevant factoid. You've never used one of those "Muxes"
>>> or have any idea of how they sound through a conventional
>>> HF receiver.
>>

> You've never done commercial HF communications in your life
> outside of ham radio

Incorrect!

> and you certainly did NOT do any
> military communications. You were never in the military.

I never claimed to be in any military nor to have done military comms. So what?
This is an amateur radio policy newsgroup, as you keep reminding us.

Does having done military comms decades ago automatically make someone
infallible in amateur radio policy matters? Nope.
>
> No matter what job, educational level, employer, or

You're plagiarizing again, Len. Can't even be original. Tsk, tsk, tsk ;-)

>>I do believe you have more RTTY experience than I do.
>
> Far, far more.

So? Doesn't mean a thing in reference to AMATEUR RADIO POLICY.
>
>>And I KNOW I have more Morse code experience than you do.

Far, far more.
>
> You don't know what I've done in radio since before you were
> born. :-)

Sure I do. You've told us all about it here for years.

It's a VERY safe bet that if you had any Morse code experience or skill at all,
you would have told us about it over and over again here.

That's just what you do, Len.
>
>>In which case I will defer to and accept your statements on RTTY if and when

Absolutely, Ryan. However <sigh> there are those who 1) equate that dissent as non-American; 2) can't get that one can fully support our men and women in battle yet not support a war; and 3) actually enjoy being in the trench their train-of-thought is in and won't tolerate your opinion.

What they don't/choose not to realize is that it is no different than "doing your job" every day. I don't totally agree with everything my employer does, says, etc. But, I do the job I am expected to do and reckon myself with that. I know soldiers who wholeheartedly disagreed with some of the things they are/were involved with--but it was their job to be involved with it and they gave every ounce of their being to it.

You may not have done this, Bill, but how can someone see fault with other Americans who say things out loud about their government (that aren't kissy/huggy) and, yet, think nothing is wrong with a government/administration doing the same thing? When democracy is so distrusted/hated/despised/whatever across the world, isn't it important for the US Gov't/Administration to be mindful of not making it seem they are an island among the people? When someone uses "my" or "me" or "I" in terms of being in a leadership position in gov't. and speaking of the gov't. as a whole, it worries me about what their mindset is concerning the rest of us. PLUS, it just doesn't sound right for a US President to say, or even imply "my gov't." At best, it is "his" Administration.

>

There is no proof at all of that. Unless you have some inside information. Is it OK for you to think that without evidence, but it's not OK for someone to believe there are no WMD in Iraq (for example?). Both are statements that no one can be absolutely sure of, to be certain. But, both are also general beliefs and should be accepted as such.

>

It is nothing of the sort, Bill. I tend to more agree with Jon. We (the US) are generally "hated" because of our being free or having a democratic nation. We are hated due to actions in the world that we undertake. Our supposed attachment to material things (perceived as such by many religious people) is detestable to others--especially in religions like you'll find in the Middle East.

>

Bill, I am not as astute as Jon is with history. So, let me make myself an example. I am on the uneducated side of this argument when it comes to history--I just am not a history buff/student and so it's never been one of my interests. BUT, I tend to agree with the things I see coming from Jon (on this debate) more than I do with yours. I also tend to "think" along his reasoning. SO, take that and understand this:

In a repressive gov't., the greatest power is keeping the people (the masses) in need and, more importantly, uneducated. The Iraqi people are uneducated. They--for the most part--have no resources from which to get other opinions than those that are force-fed to them by the people who provide for them. Thus, not only do they conscribe to a 50-year old act, they conscribe to the "leaders" of their religions who tell them that we (the US) are their enemy. I don't have to educated or know history to understand that whole concept.

>

Oh, c'mon. Congressional approval conschmessional nothing. Congress is not
always "in" on approval/disapproval for things. And, it is looking like the
Admin. can operate more and more unilaterally than ever.

> > > them contributed to all the decisions.
> >

The motive makes a LOT of difference. I did not witness as much disagreement over the Kuwaiti assistance we provided. Motives are *very* important and the motives for this war weren't clear. Oh, sure, we saw lips moving and heard sounds coming out, but neither the tone nor the facts were very clear. And, what was very clear was world opinion. And, yes, I do believe we should consider world opinion. It is a much smaller world today than it was--even 12 years ago.

> I don't play the victim gambit because others don't like my
> opinions.
>

A) Your acceptance isn't noted. B) no one should "trash" anyone for the *WAY THEY THINK.* That is a very dangerous thing to begin condoning. Trashing leads to thrashing. An example is: I am vehemently opposed to bigotry of any kind. However, I have been friends with bigots. I oppose most thought processes I see coming from Hawks. However, I have been friends with Hawks. I do not trash the way they think. *IF* they acted--ACTED--on the way they think, they'd see my attitude do a flip right away and they'd be dropped as friends/relatives/whatever.

Now, you used/Jon used the word trash. What I mean by that is when hate is expressed through words. And, trashing implies hate. If I am just disagreeing with the way someone thinks, I don't see a problem with that. And, yes, that is me. And, no, I am not an island unto myself. But, I will react to trashing/negativism/hate in a very negative way.

There's a difference between disagreeing (rational) and hateful (unrational) behaviors. And, there is a very sure way in which each is responded to.

> > >> > Should we have not ended the Taliban regime after 911?

> now and in the future.
>

Well, before I feel comfortable with that statement, I would like repressive/despotic to be defined--and not in terms of our own lifestyles/religions/politics. Cuba may be a good example. The people there seem, generally, to be OK. My guess would be they are as OK as the per capita population here. We have destitute people on our streets, we have an education crisis, a healthcare crisis, hunger, etc. So, I see no real difference in the two populations. Yet, Castro is the last bastion of Communism (which--for the record is not a political system it is a financial system) and we leave him alone. I thnk we should continue to leave him alone. How do I acknowledge that, and yet support and agree with actions that will extinguish "repressive/despotic" regimes?

> > >> culture.
> > >

Thank you. Very well said. I would also add to your last sentance "and how asleep the people are." What I mean by that is in order for "us" to begin making decisions on stomping out (my terminology) other leaders/countries, then we the people had best wake up and get a whole lot more involved (i.e., be less fat happy and stupid/apathetic) to the goings on in our world. I don't want to be ignorantly saying whooah. And, the people in this country are, to a larger degree than I like, very apathetic.

> > > How far do you let culture influence limitations to individual
freedoms?

> in some country.
>

I disagree. While it is a hard truth to admit, I don't think it is for us to determine that a nation should be militarily mounted upon for any way in which its *CULTURE* acts. Now, if you are talking about a government that

is brutalizing, anyone, then I think much differently. But, if it a culture, it is my belief that we don't interfere with cultures. The reason, as a court-appointed attorney might argue, is because then we begin making culture judgements, and that is just not right IMHO.

Now, before you get all "go to Russia" on me, YES, I would totally disagree with any culture in which anyone/thing is brutalized. And, I would call upon our human rights organizations, and government to act in way that effects change--SHORT of military action. Wars are not the way to change cultures.

>

Why not debate those points, Bill. You acquiese whenever the nitty-gritty point is made. It is exactly that point--all other agruing and points aside--that Jon has been trying to make. He just finally got through to you with that observation. I think you realize what he was saying, but you only looked at it in a microcosmic way. It is exactly that point that he's been trying to get across to you in the WHOLE debate.

The "major anti-communist" cold war is not behind us, Bill!!!! It is part of OUR culture (to go back to earlier comments on culture). Haven't you seen some of the comments even here in this newsgroup of "go to _____"?. Fill in the blank with Russia--or whatever favorite despotic regime (ahem) you'd like.

I don't think that is the debate, Bill. We certainly do enjoy the freeist and best economic system in the world, or at least we have. Your last sentence seems to produce the belief that because of what Jon has said, and me, that you think our debate is that this country is *not* the freeist and best economic system in the world. It is how we act upon--and to what limits--and permit our government to act upon--and to what limits, what we perceive as threats to our way of living, that this debate is about.

>in battle yet not support a war...(SNIP)

Hi Kim. The problem here is that if you actively "protest" some action wherein our troops are engaged in active combat or "peacekeeping" missions, that is read as weakenss by the "other side" and is interpreted as a lack of support at home for that mission.

This only emboldens them to more hostilities, being certain that such will only heighten the angst at home.

That Soldier, Sailor, Airman or Marine is now in MORE danger than he/she would have been otherwise because "Charlie" (Or Muhammed, or Wun Phat Dik, or whoever...) is now willing to try and use that against our troops.

>I know soldiers who wholeheartedly disagreed with some of the
>things they are/were involved with--but it was their job to be involved with

Then, the other side would be wrong. I don't think it is disputed that the United States has an incredible military force and is quite capable of success with any mission. Actually, it might be a strategic benefit for the other side to think that we are weak due to dissent at home. :)

As to a lack of support for the mission. Well, it may very well be a lack of support for a particular mission. I wouldn't want that to be a secret if it's the way I felt. Just as I wouldn't want pertinent facts from the other side to be a secret. What I mean by that is that a part of war and peace is how the population is reacting to it. It isn't just the military that goes to war, it is all of us. And, it isn't just the government on the other side that is a victim of the war, it is all of them.

I just don't agree with that, Steve. I think that to be a free nation means we support the act of freedom during any time--war or peace. Now, if you're talking about becoming one with the enemy...that's a whole different ballgame. If my objection to a war means that I begin publicly saying things that are military secrets, or anything akin to that, then I would be wrong. But, to disagree with a war and to state my belief against it--even act on my belief against it by taking to the streets and joining a peace rally, is the most extreme expression of freedom and what it stands for, that I can think of.

73/88 to you!!! Kim W5TIT

The Vietnam War was extended several YEARS because of Hanoi's beliefe that the American PEOPLE were against the war (ALL OF THEM). This gave the the needed 'push' to keep on going.

That is exactly what your kind of thinking will lead us into AGAIN.

'Those that fail to learn from history are doomed to repeat it" Or something like that. Well you get the point.

I knew that it was important to obtain written permission. You muffed
that part.

> Your first pass at it
> claimed a commander had no authority to authorize anything to do with

> amateur radio.

You continue to have difficulty with reading comprehension. You overlook the key word "if". I questioned your "commander's" authority to issue such permission, especially when he doesn't issue it writing. I still question it. You seem to think that the term "commander" means anybody anywhere up the chain of command from you. I don't see it that way. You haven't offered what position your "commander" occupied.

> Keep giggling, it makes you look even more simple.

I'm not the one left holding the the empty bag of alleged T5 permissions.

> Better yet, why
> not go work some more Frenchmen (out of band) on 6M?

I was never out of band when working French stations on 6m from Tanzania. These days, I'm not even hearing any Frenchmen.

Did you do any studying on those questions about your alleged T5 operation posed to you by N2EY and me?

We all know what Len implied with his tales. I don't know anyone named "Huffy". Len was a rear echelon type. Len did make a wild accusation about Steve's discharge from the USMC. With which of these did you take issue?

> Huffy then makes claims that he is/was a warrior, but cannot
> reference any of it. Dave can only clip and past others remarks, and

Who is "Huffy"? Do you believe the words I'm using to respond to your comments were a clip and "past" job?

> What is your stated goal here?

I haven't stated a goal here. I might offer one after you've answered those questions about your alleged T5 operation.

Once again correct, Dave

> Our ARES group participates in mock prison riots. We haven't figured
> out how to arrange a real prison riot. That and we no longer have an
> operational prison in the area.

There you go! The only way to practice for emergencies is to practice for them. The whole practice thing is kind of like say, the "Vomit Comet" that the astronauts do. they look like they are even having fun while experiencing weightlessness. How would anyone practice for anything if the rationale was that you had to experience the real thing, and not practice. go figure.

> Practice makes perfect.

Right. You have to know if your rig is going to put out a good signal, and it helps to have some sort of coverage knowledge. How we gonna do this if we don't practice?

> If you're going to dismiss the value of contesting in honing operating
> skills in such an arrogant manner, it is time for you to seek new
> sources of information for your mental database.

Of course, more knowledge might make it difficult to dismiss it in an arrogant fashion.

> We haven't figured out how to arrange a real prison riot, a real tornado
> or a real flood for practice purposes. Field Day and drills will have
> to do for most of us. If you'd like to drop by, we can arrange to leave
> you in Wildcat Hollow so the gang can practice looking for a lost

Of course we can't. My guess is that anyone thinking otherwise needs to educate themselves.

> You always resort to something like this in an effort to dismiss the

> lot for a guy who isn't involved in amateur radio.

I don't know about you, but I tend to listen to my peers. Maybe to those who aren't my peers, but only if they present a good argument, and use the manners their mama should have taught them.

> Not all emergencies happen in the United States. Not all of those which
> do take place in the United States involve local communications. As
> you've told us, real emergencies don't have rules. You use what you
> need or what you have in dealing with an emergency.

As I recall, many of the emergencies in the US use HF also. So they definitely don't use simply local comms.

> SOME real emergencies involve liaison with local authorities. Some need
> liaison with state or federal authorities. Some don't need liaison with
> any authorities. If you decide to come to participate in our Wildcat
> Hollow lost person scenario, you might as well leave that cellular phone
> at home. They don't work in Wildcat Hollow.

In our area, we rescue people all the time. Not so long ago we rescued a fellow who was having heart problems on the side of the road. That one did involve authorities. I've been rescued twice now during the pursuit of one of my other hobbies (off road Bahaing) This just required some hams and an FWD and a winch. Several 911 call rescues have been made in the past year or so. Cell phones are almost not in the picture, because they are often out of range, or there seems to be a fair amount of "I don't want to get involved" syndrome among the users.

> Quit pretending that you know all about contesting and amateur radio's
> part in emergency efforts. You don't.

Lack of knowledge has never been a prerequisite for an opinion, has it?

The more I thought it about it, the more I saw some logic in it. To
extend your idea, if Len Anderson wants to play, he has to get in the
game.

> Go enlist, then volunteer for Iraq.

Why would Phil do that?

Brian,

Who is "Huffy"?

I've read Dave's posts, looked back through this thread, and even
searched Google, but I cannot find the post where Dave calls Len an
"REMF".

Could you point us to it, please?

> Huffy then makes claims that he is/was a warrior, but cannot

Brian,

Who is "Huffy"?

I've read Dave's posts, looked back through this thread, and even
searched Google, but I cannot find the post where Dave calls Len an
"REMF".

Could you point us to it, please?

> Huffy then makes claims that he is/was a warrior, but cannot

Can not or will not?

>

> There it is. Google knows.

I think you missed some relevant points, Dave. Len's reference to the "Bear" bomber might lead the unsuspecting to think he was in some sort of danger from them while in Japan. However:

- The airline distance from Chongjin, North Korea to Tokyo is at least 670
statute miles. The distance from Vladivostok to Tokyo is 663 statute miles.
(Source: "Esso War Map III, Featuring The Pacific Theater", printed 1944).

- For interesting info on the Tupolev TU-95, and its variants, known to NATO as
the "Bear", see:

http://www.fas.org/nuke/guide/russia/bomber/tu-95.htm

which tells us that:

- Development of the TU-95/"Bear" began in June, 1951.

- First flight of the first prototype, November, 1952.

- Production began January, 1956.

- First deployment August, 1957.

- Four turboprop engines driving counterrotating propellers. "Turboprop" refers
to jet turbine engines driving propellers.

- Len left Japan before any TU-95s were deployed.
>
> Love your "I have a patent and you don't" routine, Leonard.

A US patent granted in 1968 would have expired in 1985. Perhaps a more timely question would be "who has a current US patent?"

> > means
> > we support the act of freedom during any time--war or peace.

Exactly! Once we start down the road of not allowing nonviolent, legal dissent or protest against govt. decisions in wartime, we can easily wind up with results that essentially eliminate the very freedoms that are being defended. For example, maybe presidential elections should be suspended in wartime, because, by definition, anyone who runs against an incumbent president disagrees with that incumbent on some policy issues. Instead, perhaps in wartime an incumbent president should have the power to stay in office as long as he/she feels up to the job, and then to name his/her successor without an election.

Or perhaps a wartime President should have unilateral power to increase taxes and impose new taxes during wartime. After all, dissent about taxes would give aid and comfort to the enemy, right?

> >Now, if

A nonviolent peace rally, of course. Illegally blocking access or
damaging others' property is not nonviolent action.
> >
> > 73/88 to you!!! > >
> >
>
> The Vietnam War was extended several YEARS because of Hanoi's beliefe that
> the American PEOPLE were against the war (ALL OF THEM). This gave the the
> needed 'push' to keep on going.

I disagree.

In 1968, Richard M. Nixon ran for president on a platform that said,
in part, that he "had a secret plan to end the war in Vietnam". Nixon
won, of course. It seems to me that the election of a president who
repeatedly stated that he has a plan to end the war (he didn't say
"WIN the war", he said "END the war") might give the folks in Hanoi
that impression much more than any anti-war rally.
>
> That is exactly what your kind of thinking will lead us into AGAIN.

So what's the solution? Ban all protest against presidential policies
during declared and undeclared wars? Allow the President to have
unlimited tax and other powers he deems necessary for the war effort,
with no checks and balances?
>
> 'Those that fail to learn from history are doomed to repeat it" Or
> something like that. Well you get the point.

Yup.

But it's more important that the freedoms not be destroyed in the
process of defending them. As in "we destroyed the village in order to
save it".

Inconsistent. "Ham radio" is supposed to equal "amateur radio"
yet the renowned judge of petty details rules that it is "incorrect."

Morse code cognition MUST be demonstrated to obtain a US
amateur radio license having below-30-MHz privileges. That's
a LEGAL REQUIREMENT and does not fall into the "useful"
category...except to those who would bastardize English
language use for their own narrow-minded little purposes.

Outside of either "ham radio," "amateur radio," or the Archaic
Radiotelegraphy Society, morse code has VERY LITTLE USE.

>is somehow making a positive contribution.
>
>What is your stated goal here?

Heil has no "stated" goal here, but it is fairly obvious: Claim
expertise by wording statements carefully so that they
APPEAR to be more than they are. On that basis he can
then expound on it using Google archives as "references" and
feel free to put down others through his "superiority."

Heil appeared to "wow" the readership by all those early
mentions of State Department communications and office
titles. Very few readers here can be expected to have State
Department communications experience, so the stage is set
for a nice snowjob.

What Heil did not reckon on is that military communications
is larger than what Department of State has and, with normal
military assignment turnover rates, there would be a greater
chance of readers here having past experience in military
radio communications. Not only that, but mentioning a very
small African country that is relatively unfamiliar to most was
another attempt at "exotic locale glamour" which backfired.

Heil has been on damage-control for years in here, attempting
to misdirect the subject away from talking directly about his
claims through comments about the person of participants.
The common technique he uses is to attempt humiliation by
using details others have supplied then "comparing" those to
his own very general, undetailed statements of his own.

For an example, his "combat experience" is alluded to by a
simple, no-details statement that he was in a country at war.
Vietnam, even just South Vietnam, is not a small place and
the ratio of supply/support personnel to active combat troops
in the US Army was then about 7:1. Heil claimed USAF
military service which had a higher ratio of support to active
combat personnel. Heil had NO identification of his unit or

geographic location or any statement of his duties. So far, his "combat activity" statements are ambiguous...and begin to look like just another snowjob.

>>
>> You've never worked in commercial HF comms
>> or have any experience in anything but simple amateur radio
>> stations.
>
>Doesn't answer the question. You're just repeating yourself.

You haven't stated anything about your past experience
except the most general ambiguous statements about work
and alleged experience as an amateur licensee. You have
NO references about communications experience outside
of amateurism. From that no one has to accede to your
demand for any answer.

>Incorrect. Unliked you, Len, I don't use this newsgroup to mention everything
>I've ever done outside amateur radio. In fact, I don't talk about my work
>here very much.

Incorrect. You do NOT MENTION ANYTHING. Ergo, you have
NO experience in radio communication outside of amateurism.

>Doesn't prove a thing, len. You're presuming your conclusion.

You have NO REFERENCES. Outside of amateur radio your
radio communications is blank, a null, non-existant.

No one can prove non-existance yet you attempt to "prove" you
have non-amateur radio experience. Bad.

>Just because someone doesn't talk about something doesn't mean they haven't
>done it. For example, not everyone named in a patent grant tells everyone

>about it.

Another morseman in here claimed "26 patents" for many
messages...yet there was only ONE such US patent and he was
co-inventor of record.

Irrelevant and gratuitous snowjobbing by a morseman.

>See above. There's lots of things I don't talk about.

Proves nothing other than you have NO REFERENCE for such
things.

>btw, I have worked with cystems that use 5823s.

C-Systems was not under discussion. Did you or did you not
work at C-Systems?

>You're projecting your own emotions and behavior onto others, Len.

Incorrect. I'm detailing where you have NO REFERENCES
outside of amateur radio.

YOU cannot prove any non-amateur radio experience by
saying nothing of detail.

>> You've never done commercial HF communications in your life
>> outside of ham radio
>
>Incorrect!

Then BE SPECIFIC on what you have "done."

Otherwise you are nothing more than vapor, working on vaporware.

>Sure I do. You've told us all about it here for years.

I have detailed it and have the references and documentation.

You have vapor and vaporware.

>> You are NOT in any position to DEMAND anything in here,
>
>How in the world do you read my statement as a DEMAND? It's not a DEMAND.
>It's just a clear, concise statement of fact.

Incorrect. You have stated nothing in regards to non-amateur
radio communications. Yet you demand others to be detailed
in responses to your questions, prattle endlessly about
NON-amateur-radio subjects, and behave as if your words
are sacrosanct. That leads to the following "profiling" -

No matter what job, educational level, employer, or
government/military service that any newsgroup opponent has,
if said opponent fails to honor and revere Miccolis's views, they will
be the target of his arrogant insults, ridicule, name-calling, put-

downs, denigrations, and gross exaggerations of Miccolis's self-importance and experience...not to mention puerile pique.

I can't hear SSB QSOs with "NO problem". That's why I leave nets and DX chasing to my XYL. I just set up & maintain her station, do some packet, chew the rag with friends and plan to work digital modes like PSK31 when time permits.Computer to computer Morse at really high speeds has always intrigued me too. I simply resent having had to copy Morse by hand to do these things then have people with good ears tell me how easy it is.

So he could properly frame the written permission required by deployed
amateurs. Sure would be nice for those deployed commanders and
amateurs to have some professional legal advice, instead of a bunch of
armchair warriors and codester lawyers.

That hasn't been my experience. I have such severe tininitis I can't
even spell it coupled with profound hearing loss from the midrange up.
Problem I have with Morse is that I hear dits and dahs that are
generated by my own ears as well as missing real ones due to deafness
and the whole session goes south once one of my self-generated tones
modulates with the one I'm trying to hear to make a warble.

Voices are a little easier, even with some QRM/N, because I 'copy' them
much more than I do code (eg, the XYL never chews me out in Morse) but I
limit my SSB and even FM rag chews to friends willing to excuse my
mistakes. That's why PC Morse kind of interests me. Maybe when I retire
....

You muffed all of it.

You said that a commander could not grant permission to operate
amateur radio under any circumstance.

Now you say that he has to put it in writing.

Why would he put it in writing if you say he could not grant it?

> > Your first pass at it
> > claimed a commander had no authority to authorize anything to do with

Why would you question a commander's authority? Oh, forgot. You were
in Vietnam.

> I still question it.

Marvy. Take it up with GW, the Joint Chiefs, and the Judge Advocate.

You seem to think that the term "commander" means
> anybody anywhere up the chain of command from you.

Obviously not. These and other misconceptions you have about the
military in general, and the Air Force in particular are staggering
considering that you once served in the Air Force. Oh, forgot. You
were in Vietnam.

I don't see it that
> way. You haven't offered what position your "commander" occupied.

He occupied a command position.

> > Keep giggling, it makes you look even more simple.
>
> I'm not the one left holding the the empty bag of alleged T5
> permissions.

You have a full bag of T5 permissions? Wow!!! Who granted them?

Amateur radio operation was one of the few enjoyable things about
serving in Somalia. I don't regret any part of it.

> > Better yet, why
> > not go work some more Frenchmen (out of band) on 6M?
>
> I was never out of band when working French stations on 6m from
> Tanzania. These days, I'm not even hearing any Frenchmen.

Those frenchmen were out of band. Another Frenchman here confirmed it
in a post directly to you, and which you replied to, and which I
reposted due to your loss of memory. Later, Ferguson confirmed it

with a post from the French telecommunications website, so it wasn't just heresay.

You said that you would keep operating regardless, couldn't be concerned with knowing anything about another country's regulations. You didn't mind helping others violote regulations as long as you were on frequency.

> Did you do any studying on those questions about your alleged T5
> operation posed to you by N2EY and me?

Those were some pretty hard questions, most of which had been answered prior to the latest iteration of Jim and you asking them.

You guys really do need to work on your reading comprehension.

Yes indeed. A cripple could prolly get a wheel chair up the stairs to a
rest room too, but we don't require it. It was a lot harder for me to
get up to 15WPM than someone with good ears. Then all I could find were
"standard" QSOs (name is, rig is, qth is ...). Boreing! When I dared
tell one dude I'd been born in his QTH he went QRT! So I gave it up.
>
> The same can be said for the written test.

Yes, IF it's prime purpose is to limit the number of hams; but I'm not
sure that is true. Unlike Morse, a well thot out written exam could
serve a good purpose.

As far as the FCC goes they can't even be bothered enforcing the laws
against blatently illegal activities like freebanding & such in their
own back yard. I seriously doubt that they'll be particulary
interested in extending their reach to Iraq to whack a few guys who
are most likely operating legally by not only ITU but also under U.S.
technical & operating regs. Nobody dies, nobody gets hurt, nobody
suffers illegal interfernce. Lotta pedantic blather. But then this is
RRAP huh . . ?

Also, don't forget that shrimp boats, long-line fishing
boats, tuna boats, and many pleasure yachts that have been
unlawfully using HF aeronautical frequencies for years.
This creates a distinct danger to aircraft and safety of
life! What has the FCC done? Nothing! despite the
fact that such violations have been reported to the FCC
year after year after year. FCC idiots!

Me too....since were both such nice guys...wanna cut a deal and split it?
That way we don't have to be but half as nice.

With all due respect Vito...you should have checked it out a bit longer. I
have NO PROBLEM finding interesting QSOs on CW on a DAILY basis.

You can find me on about 7030 or so. Usually in the late afternoons. And if
Im too fast, I'll slow down to what you like.

Are all you 'hearing handicapped' individuals also blind? Or can not feel
with ones fingers? Try blinking lights and finger sense.

Sounds like a bunch of excuses to me.

My ex had a 70% hearing loss in each ear, severe ringing in the ears (I
can't spell the technical term either), and could not wear hearing aids. He
passed the 5 words per minute by adjusting the pitch so it was very
different from the ringing and adjusting the volume so it was loud enough to
drown out the ringing. Of course I could not stay in the same room unless
he was wearing headphones to practice.

I didn't say it was bad. You only thought that because of your poor
reading comprehension. I think it was good and I'm glad that you're the
one who wrote it. I'm afraid though that you've aroused the ire of your
mentor.

Seems to me that in past applicable situations, most have figured it out without the assistance of an attorney. You, for example, seem to be the only guy in Somalia who had trouble with the concept.

A digital mode that (Dick says) computers cannot copy? Doesn't sound right.

Where's that quote, Brian?

> Now you say that he has to put it in writing.

I've said all along that you needed it in writing. Are you still having
trouble with the concept?

> Why would he put it in writing if you say he could not grant it?

See the above request for a quote.

> > > Your first pass at it

As stated previously, the permission may not have been his to give. You
may not have gone high enough in the command chain.

> > I still question it.
>
> Marvy. Take it up with GW, the Joint Chiefs, and the Judge Advocate.

None of them alleged permission for amateur radio operation from
Somalia. You did. I'm taking it up with you.

You might qualify for a disability for that reading comprehension
difficulty.

> Amateur radio operation was one of the few enjoyable things about
> serving in Somalia. I don't regret any part of it.

That has been apparent. That doesn't prove that your operation was a
legal one.

> > > Better yet, why
> > > not go work some more Frenchmen (out of band) on 6M?

> with a post from the French telecommunications website, so it wasn't
> just heresay.

As indicated to you in quite a number of previous posts, I'm not
responsible for the actions of French hams. I'm only responsible for
operating my station in accordance with the regs of the country in which
I reside.

> You said that you would keep operating regardless, couldn't be
> concerned with knowing anything about another country's regulations.
> You didn't mind helping others violote regulations as long as you were
> on frequency.

No help from me was required. Each station who keys a transmitter is
responsible for his own actions. "I couldn't help calling that P5 on
14.110 because he enticed me with his presence" isn't an excuse.

> > Did you do any studying on those questions about your alleged T5
> > operation posed to you by N2EY and me?
>
> Those were some pretty hard questions, most of which had been answered

The FCC is a party to an inter-agency agreement as to what
spectrum the military can use and where, and the inquiry was
made to the individual who is in the best postion to get me
the answers that I need. Had I had a suitable contact in DoD
or NTIA or the State Department I wouild have asked there.

> 2) Use of radio spectrum outside the US

The FCC still retains a "hook" on the conduct of an amateur
licensee operating under color of his/her US license even in a
foreign country.

> 3) ARRL's regulation of it's DXCC award.

Never said that it did. That's ARRL's problem.

>The simple fact is that a military commander on foriegn soil
>can do whatever his superior officer says he can do. That is
>indeed just exactly what an army is for.

And there are regs that define the limits of what a commander
may authorize in radio use and what has to be authorized by the
service frequency coordinator in conjunction with the NTIA and
the US State Department.

In this case, there certainly is a provision for using amateur-band
frequencies world-wide for MILITARY puposes. No question about that.

An amateur playing DX on 20 meters is not a military purpose.

Have the regs been changed since I checked them last (7 years ago)?

THAT's my inquiry.

It's all written down in the regs as to who can authorize what
and when.

As far as joining, The Selective Service Board had their crack
at me in 1961 and even though they found in the pre-induction
physical that I had a hidden from-birth disability that exempted
me from military service I went and worked as a civilian for the
military and then the civilian side, a total of nearly 40 years.

I've done my thing and that thing was not draft-dodging.

>RRAP huh . . ?

All depends on whose ox is gored, right? And what do I advise
a client who wants to know if it's really legal or not?

One of the principles by which I practice law and advise
clients is to be clear what the WORST case is, not what they
can get away with (I chase a higher class of ambulance, right?).
My usual statement is "if you get caught, what defense can you
offer" based on two principles - ignorance does not cut it, and
the "dude" defense ("some other dude did it") is not applicable
to these sort of things.

If the regs have changed to permit a commander to issue ham
operating permission, so be it (I think that would be a bad
move if it was so).

We will see.

I don't know where you get that as my logic, Vito. My point is that in the card game of life, we are all dealt different hands. We have to work with what we have. It took me over six months to learn Morse code well enough to pass the test that some people here say can be learned in weekend. Should I have just given up because they are so much better than me? Thing one is they aren't better, thing two is I wanted the ticket, so I learned Morse Code. Simple.

>> Too many whiners these days!
>
> Naw, too many selfish people who think that everybody should suffer
> every injustice and misery they did.

I think everyone should pass the the tests in life that we are given. Let's take another of my hobbies, Ice Hockey. If someone wants to be on my team, they need to know how to skate. If there is some problem that they cannot skate, they can't be on the team (albeit with my condolences) But it's just how it is. If we were forced to take people who couldn't skate, the game would be messed up a bit. It's the same that I can't play in the NHL. My skills are just not good enough. I deal with it though, and don't think the people playing in the NHL are selfish. Rather, I admire them instead of resent and envy them.

I enjoy the little challenges like learning Morse code while having a problem that hinders it. Things that are just handed to us are seldom appreciated. Of course in America these days, everything is owed to us.

Right. We can do it. I also have a pair of headphones attached to my
television, but I don't use them when my wife is in the room because the
sound escaping from them drives her nuts.And her and my boy don't like
closed captioning. Basically I only watch tv after they have gone to bed
for the evening. That may be why I have so many hobbies! 8^)

That's right, Len.

I also haven't stated my past experience baking bread. That doesn't mean I have
never baked any bread, only that I haven't talked about it here.

> You have
> NO references about communications experience outside
> of amateurism.

"References"? From whom?

> From that no one has to accede to your
> demand for any answer.

I don't demand anything, Len. I simply asked a simple question: How do you know
what I have and have not done?

I posted here for several years before I mentioned that I have BSEE and MSEE degrees. Did the fact I did not mention them before mean I did not have them? Of course not.
>
>>Incorrect. Unlike you, Len, I don't use this newsgroup to mention
>>everything I've ever done outside amateur radio. In fact, I don't talk
>>about my work here very much.
>
> Incorrect. You do NOT MENTION ANYTHING.

Sure I do. I work as an electrical engineer. That's what I've done since I graduated in 1976. That's all you need to know.

> Ergo, you have
> NO experience in radio communication outside of amateurism.

That's simply incorrect. I DO have "experience in radio communication outside of amateurism." I just don;t talk about it here because it's not relevant to amateur radio policy.
>
>>Doesn't prove a thing, len. You're presuming your conclusion.
>
> You have NO REFERENCES.

References from whom?

> Outside of amateur radio your
> radio communications is blank, a null, non-existant.

That's just not true, Len. Live with it.
>
> No one can prove non-existance yet you attempt to "prove" you
> have non-amateur radio experience. Bad.

Incorrect. I just don't talk about my work here.
>
>>Just because someone doesn't talk about something doesn't mean they haven't

> things.

Again with the REFERENCES?

What it proves is that I don't talk about them.
>
>>btw, I have worked with cystems that use 5823s.
>
> C-Systems was not under discussion. Did you or did you not
> work at C-Systems?

Typo. You make more typos than I, Len.

I have worked with systems that used 5823s. Cold cathode gas tube. Same system also used Dekatron counter tubes (sometimes nicknamed "whirligig tube" because of its appearance in operation).

>>You're projecting your own emotions and behavior onto others, Len.
>
> Incorrect. I'm detailing where you have NO REFERENCES
> outside of amateur radio.

What are these REFERENCES you keep harping on, and what difference do they make to amateur radio policy?
>
> YOU cannot prove any non-amateur radio experience by
> saying nothing of detail.

That's right! And neither can YOU prove I have no experience.
>
>>> You've never done commercial HF communications in your life
>>> outside of ham radio
>>
>>Incorrect!
>
> Then BE SPECIFIC on what you have "done."

Why? "No one has to accede to your demand for any answer." You refuse to answer many of my questions - why should I answer yours? Because you DEMAND it?
>
> Otherwise you are nothing more than vapor, working on vaporware.

No, Len, I'm very real, working on real things. I just don't discuss most of them here. Since this is an amateur radio newsgroup, I discuss amateur radio here. If it were a bread baking newsgroup, I'd discuss bread baking.

btw, I do not and have never baked bread for a living. But I know a radio amateur who does. He's famous for it in these parts.
>
>>Sure I do. You've told us all about it here for years.
>
> I have detailed it and have the references and documentation.

I have references and documentation of what I've done, too. But I don't talk about it here.

>>> You are NOT in any position to DEMAND anything in here,

Neither are you, Len. Live with it.

>>How in the world do you read my statement as a DEMAND? It's not a
>> DEMAND.
>>It's just a clear, concise statement of fact.
>
> Incorrect.

How is it incorrect?

> You have stated nothing in regards to non-amateur
> radio communications.

Incorrect! I just haven't given the details you want. And I'm not going to.

Your attempt to find out where I work and more details about what I do has failed, Len. Give it up - I'm not going to tell you.

Besides, it doesn't matter. No matter what job experience, references or documentation I present, you would almost certainly find fault with it, demean it and insult me with it. You have behaved that way towards everyone here whose work experience is known to you and who disagrees with you on unrelated amateur radio policy issues.

Why would any rational person who disagrees with you tell you their work experience, given the way you have consistently behaved towards those do tell you their work experience and who disagree with you on unrelated amateur radio policy matters?

No, I'll be fine. I don't normally eat that much. I am in control and I don't have to worry that it will happen again

>>Tomorrow I'll have a HAM and cheese sandwich.
>
> PNP or NPN...?!?!

I prefer NPN transistors.

My watch can get on HF. I know it can get on HF since it says "30 METERS" on it.

Yes, most Hams like to operate and don't like experimenting so they don't.

Also, the current group of Hams encourages new Hams to learn Morse code above other skills.

This is Scotty Duke and I want you to all know that I am bisexual. There, now that thats out, I am looking for someone in any area to see if they will use their phone to let me listen to radio stations. My favorite format is hot AC (hot adult contemporary), 80s, rock, and smooth jazz stations, and also some top 40 stations. Since I can't get these on my regular radio, I am looking for someone to let me listen through their telephone. If you need to get to know me first we can wait a while. I know this may be weird but I am obsessed with radio and would like to get in the business. You can email me at icycool7227@aol.com. Thanks a lot!

>>Thats how the EE field /IT phenom works in this country. I cannot go back in
>>time and get that IT job that I don't like (I like EE stuff).
>
>Live and learn. Next time an IT job comes up, you may change your mind.

There is no such thing as "Live and learn" in the EE/IT professions. As soon as you try to learn (for example, by taking courses), you no longer fit the desired profile. This counteracts any positive efforts you have made. I don't want to go into detail, but steering your profile becomes impossible, or very costly.

I may be getting out of the EE field soon and into something that makes more money (although not glamorous), and is a more stable field. Most of real EE stuff is not glamorous, anyway. I wanted to do something reasonably interesting, if not glamorous.

I have one thing due at the end of this month. If I can make that deadline, I will probably stay in EE (even at less money).

>Subject: Re: When is a 2N2222 transistor a cheese sandwich?

The local Ham radio club has a gathering tomorrow.
Tomorrow's Ham club gathering I would like to ask:

Questions about Hams:

-Why are Hams fat, male, old, nerdy, boring, anti-social, code lovers, non-technical. (I'll try to get in as many of these as possible. First ask "why fat" if I don't have time for other parts of this question).

-What would a non-Ham's impression of Ham be, if invited to a Hamfest.

-Why do Hams use so many unneeded codewords in their conversation?

-Some people believe Ham radio is some kind of cult. Do you see a small part of Ham radio having "cult-like" existence? Part of this is hating CBers and modifying radios or removing CB crystal freqs to not permit CB operation.

-Why do Hams like contesting, a repetetive, boring activity.

-Why do Hams claim contesting prepares them for emergency communications?

-Why is Morse code so much a focus of Ham radio?

-Would anyone, or do you know anyone, that would be interested in a technical focus club?

Club specific questions:

-Why does newsletter state buying an HF rig is supporting "advancement of the radio art".

-Why is club photo of people homebrewing shown on club photo, when everyone in that photo hates homebrewing? (First, I will ask people in the photo if they like homebrewing).

>I think everyone should pass the the tests in life that we are given.
>Let's take another of my hobbies, Ice Hockey. If someone wants to be on
>my team, they need to know how to skate.

Tests are useful if they are relevant. Learning how to skate is relaevant to learning hockey. Learning Morse code is not relavant to radio, including amateur radio.

>My skills are just not good enough. I deal
>with it though, and don't think the people playing in the NHL are
>selfish. Rather, I admire them instead of resent and envy them.

I certainly don't admire them learning a skill of little use.

I resent Morse coders blocking the license class and taking over the hobby.

I don't envy Morse coders at all. I have tested for realtime encoding abilities. I know I can do it. I don't want to waste my time learning the whole Morse code encoding scheme.

>I enjoy the little challenges like learning Morse code while having a
>problem that hinders it.

Congratulations on learning Morse code.

>Things that are just handed to us are seldom
>appreciated. Of course in America these days, everything is owed to us.

That argument would be useful if a USEFUL skill was tested to obtain a benefit.

When such a non-useful skill is a barrier to a higher license class, something is very wrong with the hobby. I would be fine with a more useful practical skill or a more difficult written test, so the license class is not "just handed to us".

>> Technically, Morse code is a digital mode.
>
>It's actually a digitized language .

Morse code is NOT a language. English is a language. Morse code is an encoding scheme.

Morse code is an encoding scheme, used in the On-Off Keying (OOK) digital mode.

Although I suspected it earlier and have even made reference to it, this
last post of yours certainly explains why you have trouble being
welcomed with open arms at amateur radio club meetings. If you notice a
bag of chicken feathers and a caldron of hot tar anywhere near the
meeting site, I'd advise skipping the meeting.

While you're apparently not old or fat, your numerous posts lead me to believe that you're male, nerdy and without social skills.

You haven't proven that it is of little use. They haven't taken over the
hobby. In the amount of time that you have spent posting to this group
railing against the code, you could have learned it and gotten it behind
you. If there is anything that is a waste of time, it's reading and writing
posts protesting against various aspects of the hobby.

>
> That argument would be useful if a USEFUL skill was tested to obtain a

It's no more of a barrier than the written tests and you have yet to prove
that it's not useful. Every mode has its advantages and disadvantages.

Learn them for yourself. Once you've been through a few solar cycles and geomagnetic disturbances, you will develop a new appreciation for morse code & CW.

>That's right, Len.
>
>I also haven't stated my past experience baking bread. That doesn't mean I
have
>never baked any bread, only that I haven't talked about it here.

You do NOT work in radio and it is doubtful you work in
electronics. Other EEs would talk shop. You don't out of
fear. What "fear" is that? Of being discovered that you

are NOT even close to working in radio or electronics?

>> You have
>> NO references about communications experience outside
>> of amateurism.
>
>"References"? From whom?

Continue to talk in riddles. It only proves you have NO
experience in radio outside of amateurism.

>> From that no one has to accede to your
>> demand for any answer.
>
>I don't demand anything, Len. I simply asked a simple question: How do you
>know what I have and have not done?

You are very tiring. You are blustering and bluffing at great length
about something you claim to be true but you cannot prove a
single thing about communications outside of amateur radio.

Fakery is what you practice.

>I posted here for several years before I mentioned that I have BSEE and MSEE
>degrees. Did the fact I did not mention them before mean I did not have them?
>Of course not.

You could have a PhD and won a Nobel Prize a quarter century
ago and it wouldn't matter any more on the subject of
communications outside of amateurism. You don't have any
such knowledge or experience on communications outside of
amateur radio.

You can't prove any...you can't talk about it...all you are doing
is BLUFFING. A knowledge con-job is what you are pulling
in here. You are a grifter.

>Sure I do. I work as an electrical engineer. That's what I've done since I
>graduated in 1976. That's all you need to know.

Ho ho ho...the imperial speaks.

"That's all you need to know."

That's all everyone else needs to know. You know nothing of
what you claim on communications experience outside of
amateur radio. No problem. You are null, a zero on that
subject.

>> Ergo, you have
>> NO experience in radio communication outside of amateurism.
>
>That's simply incorrect. I DO have "experience in radio communication outside
>of amateurism." I just don;t talk about it here because it's not relevant to

>amateur radio policy.

Oh, boo hoo, is the pedantic parson starting to cry, too?

You DON'T have any such experience in radio communications
outside of amateur radio. You CAN'T talk about it because the
first time you did you would make a mistake. Those who HAVE
worked on such would spot it right away.

You cannot make a mistake. You cannot admit a mistake.
You keep trying to cover up with misdirections and those
terribly long posts where you get into all kinds of irrelevant
minutae in order to avoid answering the original subject.

>> Outside of amateur radio your
>> radio communications is blank, a null, non-existant.
>
>That's just not true, Len. Live with it.

In that regard I AM RIGHT. LIVE WITH IT, pedantic perfectionist.

>Incorrect. I just don't talk about my work here.

Fear.

>>>btw, I have worked with cystems that use 5823s.
>>
>> C-Systems was not under discussion. Did you or did you not
>> work at C-Systems?
>
>Typo. You make more typos than I, Len.

"C-Systems" is/was a corporation. Not a big one.

No one can have a meaningful discussion with you if you make
such terrible errors and talk in riddles.

>I have worked with systems that used 5823s. Cold cathode gas tube.

You could have said the same thing about any other active
device by simply looking it up from a tube chart.

Did you EVER work on a piece of communications equipment
for any reason that used any gas tubes?

Had you ever worked with the time-division multiplexes that I
mentioned you would have been between -2 and about +10
years old. NO ONE is so good that they can make others
believe they worked on certain equipment BEFORE THEY
WERE BORN.

You have become just an ordinary amateur grifter, a BS
flinger who can't provide any references for himself beyond
1976 and outside of amateur radio.

>That's right! And neither can YOU prove I have no experience.

No one can prove a nothing. You are a nothing.

>No, Len, I'm very real, working on real things.

Few give a damn any more.

>I just don't discuss most of them here.

You can't. The fear factor is too high for you.

>Since this is an amateur radio newsgroup, I discuss amateur radio
>here.

You have "discussed" mightily on NON-amateur subjects in
here...from foreign policy having NO bearing on amateur radio
and railroads and military aviation of a time when you were
a newborn. A whole lot of BS going down and you, Jimmie, are
a class-A hypocrite on your own statements.

Google has all that stuff archived. Live in fear that someone
might yank out some of those "I only talk about amateur radio
subjects in here" postings that DO NOT do so.

>I have references and documentation of what I've done, too. But I don't talk
>about it here.

You can't. The fear factor is too high for you.

>>>> You are NOT in any position to DEMAND anything in here,
>
>Neither are you, Len. Live with it.

Then you are just an amateur charlatan, a poseur, a non-expert
on radio-electronics outside of amateur radio, an intellectual
con-man, a grifter. A nothing but with a 1976 set of degrees.

We all have to live with what you DON'T say. You can't absolve
yourself by being arrogant, imperious.

>> You have stated nothing in regards to non-amateur
>> radio communications.
>
>Incorrect! I just haven't given the details you want. And I'm not going to.

You can't. You don't have any such details.

>Besides, it doesn't matter. No matter what job experience, references or
>documentation I present, you would almost certainly find fault with it,
>demean it and insult me with it.

See? Paranoia. Mindless, irrational paranoia. FEAR.

>You have behaved that way towards everyone here whose
>work experience is known to you and who disagrees with you on unrelated
>amateur radio policy issues.

More FEAR. You can't possibly know the future. Your "defense"
is the vaporware of "waa...waa...he might do something!...waa."

BABY.

>Why would any rational person who disagrees with you tell you their work
>experience, given the way you have consistently behaved towards those do tell
>you their work experience and who disagree with you on unrelated amateur
>radio policy matters?

Let's see some COURAGE demonstrated in here. Most other
folks have the guts to take any situation, like it or no.

You cannot ever be wrong, you cannot ever make a big mistake
so you assume that silly imperious, arrogant "I don't have to tell
you" pose. You must be a radio god in your mind. You aren't
a god in anyone else's mind.

Here, have a "profile," big radio god -

No matter what job, educational level, employer, or
government/military service that any newsgroup opponent has,
if said opponent fails to honor and revere Miccolis's views, they
will be the target of Miccolis's snide sarcasm, ridicule, name-
calling, put-downs, denigrations, and gross exaggerations of
Miccolis's self-importance and experience...plus the excessively
long misdirections which antagonistically argue minutae without
discussing the original subject.

>
>A US patent granted in 1968 would have expired in 1985. Perhaps a more
>timely question would be "who has a current US patent?"

Why is that "timely?" How does that apply to amateur radio?

Last I looked, US patents had a "life" of 17 years and were renewable once for 17 more. Could have changed.

My patent was granted in 1974. It was on a radio circuit and sub-system. You can look it up under the Delphion site searching by inventor's name. I was the sole inventor on that patent. It was assigned to RCA Corporation and up for renewal in 1991...but General Electric Company bought RCA Corp. then and may or may not have renewed it or had it reissued under a different patent number. No hu-hu on my part. I did it first.

Does Miccolis have ANY sort of patent, in or out of electronics?

If not, why hasn't he done so? He's had 27 years since he got his EE degrees. Or, none of us "has the right to know what he did." Jimmie is super-special. Everyone has to believe him and take him at his imperial word. No one may challenge him for he is never wrong.

...and that's the way it is...

"why
> fat" if I don't have time for other parts of this question)

This doesn't describe the club I belong to. Out of 7 board members, only two of us are overweight. The club members range from skinny to fat just like the normal non-ham population. You do know of course that Americans average 20 pounds or more overweight. We have several female members and are working to get more. Ages range from teenagers through college kids and on up. Any one who is into intellectual or technical pursuits is often considered nerdy, it's not limited to ham radio. Besides, what's wrong with being a nerd. One of the richest men in the country got rich because of being a nerd (Bill Gates if you don't recognize the profile). Most of our club members show up about 1/2 hour before the meeting to socialize plus socialize during the break between the presentation portion and the business portion of the meeting. They go out of their way to greet and talk to anyone new. We have a presentation at every meeting and about half of them are technical in nature. Some of our club members work code regularly and some do not.

What's your hangup on weight anyway? You act like that's the most important issue.

>
> -What would a non-Ham's impression of Ham be, if invited to a Hamfest.
>

Gadgets. That's what would register on the non-Ham. But a non-gardener would be equally confused at a garden convention. Any non-participant in an activity will be confused by that activity.

> -Why do Hams use so many unneeded codewords in their conversation?

They don't. They are using terms relevant to the hobby. Every activitiy has it's own vocabulary. When you join that activity, you learn it to facilitate communication.

>
> -Some people believe Ham radio is some kind of cult. Do you see a small part of
> Ham radio having "cult-like" existence? Part of this is hating CBers and
> modifying radios or removing CB crystal freqs to not permit CB operation.

No one but you considers it to have any cult like aspects.

>
> -Why do Hams like contesting, a repetetive, boring activity.
>

Why does anybody compete in anything? Car racing is certainly a repetitive boring activity and it has many participants and spectators.

> -Why do Hams claim contesting prepares them for emergency communications?

Because it gives you experience in adverse conditions. It helps you learn to deal with stress. You learn the limits and capabilities of your equipment. You learn the vagaries of propagation for the various bands. All this would take much longer just doing casual ragchewing.

>
> -Why is Morse code so much a focus of Ham radio?
>

It isn't. While a lot of hams use it, others don't after they have achieved their license. No one has to use it. The only ones who are making Morse code a focus of ham radio are those who are trying to get out of having to take the test.

> -Would anyone, or do you know anyone, that would be interested in a technical
> focus club?
>

Probably not. It's too limiting to have a club that focuses on just one aspect of the hobby. As previously stated, our club has technical presentations and non-technical presentations. Some members participate in community service activities and some do not. A couple are big contestors although most are not. Some are into homebrewing and some are not. Others are into doing special events. It is the variety that keeps a club strong as the members can try out different things at different times as their interests grow or change.

Our club respects each other's abilities and we do not worry about whether some one came in through the older testing standards or today's testing standards. For example, our club guru on satellite communications has been a ham less than a couple of years. However, if I ever decide to try working the satellites, I will definitely get his assitance. It doesn't matter that he is a codeless Technician and that I've been an Extra for 10 years. He

knows that activity by experience and I do not. I will happily bow to his expertise and experience in this area.

Heres the typical correct answer from most CBplussers, if they would tell the truth. Your real problem is you dont wont to learn it, and since it is a law that prevents you from being able to get on HF, you wont the Law changed to meet your needs. So now you try and come up with every excuse in the world to try and make your case for your self.

> I would be fine with a more useful practical
>skill or a more difficult written test, so the license class is not "just
>handed to us".

That interesting, a more difficult written huh. Well I guess someone could just as easily say, why should the written be more difficult, I dont plan on doing anything with theory, so why should be forced to learn it.

so the license class is not "just
>handed to us".

Well with the present system it Basically is just a give away. The present written test proves nothing other than an ability to memorize Q&As that have no meaning to most new Hams. You dont believe it ask them, they will tell you, there have been plenty posters here that will tell you thats all they did. Once the CW test goes away then your above statment will be very valid. In case you forgot your statment here it is.

"so the license class is not "just
handed to us"

>Morse code is NOT a language. English is a language. Morse code is an
>encoding scheme.

To add in specifics, International Morse Code encodes only the so-called "western" alphabetic language letters, numbers, and punctuation.

International Morse Code has no provision for syllabic languages which are primary in Asia and the Middle East and some parts of Africa. In terms of percentages and total populations, more people have syllabic language as their primary in the world as opposed to those having alphabetic languages as a primary.

>Morse code is an encoding scheme, used in the On-Off Keying (OOK) digital
>mode.

The original morse code began commercial service on wire lines in 1844 in the USA. It spread throughout the world less on the "code" but more on the simplicity of the system and ability to "relay" unattended up to three times on a wireline circuit. The Morse-Vail patent is for that relay mechanism.

It is quite probably the entymological start of the term "relay" describing an electromagnet-driven switch contact.

Primitive radio in the first 24 years or so of radio since 1896 (without vacuum tubes) could ONLY use on-off keying codes to communicate anything. On-off "morse" codings were already established for 52 years when the first radio communication was demonstrated in 1896 (in Italy and in czarist Russia). Both demonstrations used on-off codings.

In the 107 years of radio's existance, every other radio service in the world has either dropped morse code on-off modes or never considered it to begin with...but radio amateurs seem insistent on keeping the morse code test for any amateur license grant having below-30-MHz privileges.

They have NO rational or valid reasons for such a test
retention.

Other radio services in the world have either dropped on-off morse codings as a communications mode or never considered it in the first place. Some of those radio services DO work in HF on radio paths as long as any used by radio amateurs.

In 1990 and again in 1999 the FCC stated that a morse code test serves no purpose in their determination for granting any US radio amateur license. Ref: FCC 90-53, 99-412, both R&Os.

>> I certainly don't admire them learning a skill of little use.

>posts protesting against various aspects of the hobby.

This is another demonstration of the imperious arrogance of
the pro-code-test, already-licensed amateurs. None of them
will be affected by any licensing of newcomers (those not yet
licensed). It is a purely selfish motivation on their part in order
to keep the rank-status-privileges they earned primarily through
demonstrated skill in morse code testing.

Regulations, the LAW on US civil radio, is not sacrosanct,
never to be changed. Removal of amateur radio code testing
will not cause the downfall of US amateur radio.

The arguments of the no-code-test advocates are concerned
with the removal of that code test regulation. The arguments
of the pro-code-test advocates concentrate only on personal
attacks on the no-code-test advocates.

>> That argument would be useful if a USEFUL skill was tested to obtain a

>that it's not useful. Every mode has its advantages and disadvantages.
>Learn them for yourself. Once you've been through a few solar cycles and
>geomagnetic disturbances, you will develop a new appreciation for morse code
>& CW.

It's been 50 years and a bit over a month since I first fired up on
HF at US Army radio communications station ADA in Tokyo,
Japan. ADA never used any on-off keying morse codings, had
43 HF transmitters, had a throughput of 220 thousand messages
a month from Seoul, Korea, to San Francisco, California and
several other locations, operating 24/7.

Fifty years is 4 1/2 solar cycles at 11 years per cycle. The only
"geomagnetic disturbance" I observed was in a 1955 and a
complete blackout of across-Pacific paths on HF. That lasted
only four hours on the local midnight shift. No one was observed
to do any "appreciation of CW" because of that blackout. Radio
officers cussed a bit at a backlog developing...but that cleared
up with constant 60 WPM TTY tape messages.

In the 50 years following 1953 I've operated legally on frequencies
and bands from VLF on up to Ku-band microwaves. Never used
any on-off morse codings, never had any need to do so. The last
solar storm disturbance I've witnessed since happened in eastern
Canada and involved a power grid disturbance and a shut-down of
an electric power intertie with both Canada and northeastern USA
affected. Skill at on-off morse codings weren't any help there in

restoring electrical power.

At this point, you may be thinking in terms of the imperial "don't have the right attitude about morse code and amateur radio," but it would not be adviseable to trot that one out in public. You must ask yourself truthfully if morse code testing is of any actual value to the FCC and to newcomers who weren't licensed before. I say such testing has no value, an agreement with the FCC's opinion.

It is up to you and all the pro-code-test advocates to prove a need to continue morse code testing. Not the other way around. Based on the experience of all other radio services using HF, there is no reason to keep on using morse modes for communications; they don't.

About the only validity the pro-code-test advocates can summon with sincerity is tradition. Amateurs have always had to test for code to get on HF...therefore, the tradition logic has it (wrongly)... code testing must always continue. Tradition is nice, but it is seldom practical and it certainly has a vapid argument against the no-code-test advocates' viewpoint. It isn't always a good arguing point for law and regulations.

The only other argument for continued code testing is the so-called "international language" reason. All amateurs using the same mode not involving tone of voice, dialect, or inflection can understand one another. A problem there is that the world population using syllabic or ideographic primary languages far outnumbers all those using an alphabetic language as primary. International Morse Code is based solely on alphabetic languages.

Beyond the first 50 or so characters, including prosigns, the common "CW" abbreviations are still based on the English language and alphabet. Longer text transmissions need to be more in clear language in order to convey correct meanings. However, dialect and other idiosynchrasies of different alphabetic languages can be mis-interpreted. All those with syllabic or ideographic primary languages ARE required to learn a "new language" in order to operate using International Morse Code. Those who speak English as a primary will have little trouble with common abbreviations. This is not a truism with operators not having an alphabetic language as primary. Note: A "let them eat cake" argument did not work for a certain Marie A. She lost her head and came apart at the end...

There are no other compelling reasons to continue advocacy of morse code testing for licensing. The invalid "reason" left is "all have to do it because the already-licensed had to," the old hazing ritual rationalization. Not a good one.

The MOAB is a weapon of mass destruction, Dave. It is one of the largest non-nuclear weapons ever developed, intended to cause massive damage over a wide area. According to the military, its destructive power is only slightly less than some of today's smaller tactical nuclear weapons. As such, it certainly isn't a weapon of small destruction.

> I'm not the one doing the Chicken Little routine,

You've said repeatedly you don't understand my opinion, so I'm certainly not surprised you think that. Perhaps if you spent less time trying to negatively characterize my opinions (as "hand wringing, a "Chicken Little routine," or whatever), you might be able to better understand them. I, on the other hand, do understand your opinions and think they are foolish and naive. However, rather then continued judgment of each other's opinions, instead of actually discussing issues, I'll end our conversation about this with that.

I agree, Kim. Many find it is easier to evade the truth when it makes them uncomfortable. Regardless, I have no idea what the military intended to do with that weapon when they shipped it to Iraq when they did, but I certainly thought it was worth discussing. Thankfully, that weapon was not used, perhaps making further discussion somewhat moot (other than to perhaps discuss the thinking behind that deployment with an eye on future conflicts).

Heh. Jimmy trolled you into the irrational rant of all rants. Good show James.

Seldom in the history of mankind has anybody worked so hard for so long to make complete asses of themselves in public as you have Leonard. You've finally managed to set a high water mark in at least some field, an achievement which has escaped you for your prior seven decades of beavering away to become a somebody anybody anywhere.

Congratultions ya pointless ZERO, you've arrived.

Bruce, I live in a restricted neighborhood and have been turned into a
shortwave listener. We're considering building a house further out as
I just got a promotion at work. When I see a benefit to upgrading to
extra, I will do so. I don't collect licenses, nor plaster my wall
with superfluous achievements.

> going.

That's only partially true, Dan. Hanoi's prior experience with UK and French troops certainly played a larger role in their thinking, to simply wear us down until we gave up, than the demonstrations in this country. At most, the demonstrations only reinforced that thinking.

However, American attitudes at home certainly played a role in the peace discussions - on both sides of the discussion. Those representing our side in the discussions were more willing to compromise once it became obvious support for the war was waning in this country (something they steadfastly refused to do early in those discussions).

Anything Hanoi gained from the demonstrations here had to be weighed against conditions there. A war to wear us down would have taken many years, resulting in even more damage to their country. Hanoi clearly preferred a quicker route if available. Our move towards compromise fueled Hanoi's thinking they could soon end the conflict, leading them more towards compromise.

In that environment, both side then played a game of increasing the conflict when things didn't go their way in the discussions. Given our hand in this game (the continued destruction of more towns and villages), the demonstrations here in this country certainly wasn't much of a hand for them to play - and they knew that. But, in their eyes, even that was better than what we asked for in the early discussions (unconditional surrender).

Kim, I think you're making progress.

Dave doesn't try to deflect the description "flippant and arrogant."

Kim,

Guess who said this:

"Of course the people don't want war. But after all, it's the leaders of the
country who determine the policy, and it's always a simple matter to drag the
people along whether it's a democracy, a fascist dictatorship, or a parliament,
or a communist dictatorship. Voice or no voice, the people can always be
brought to the bidding of the leaders. That is easy. All you have to do is tell
them they are being attacked, and denounce the pacifists for lack of
patriotism, and exposing the country to greater danger."

Hint: It's not an American

That's the way the system works if you're just going to whine about it and
do nothing to position yourself for the next opportunity.

>I may be getting out of the EE field soon and into something that makes more

>month. If I can make that deadline, I will probably stay in EE (even at alot
>less money).

Why compromise? There is absolutely NO law that says once you are doing
one thing you can't change to something else.

Who knows, Vipul, maybe you'll find something you're good at.

>There is no such thing as "Live and learn" in the EE/IT professions.

Sure there is.

You're just not willing to do what it takes to be aggressive enough to
position yourself to be ready for the next opportunity.

You're part of the "Burger King" generation....You want it "Your Way,
Right Away", or you don't want it at all.

To reiterate: The MOAB is not a weapon of mass destruction. It is not
nuclear. It is not biological. It is not chemical. In short, your
claim falls flat.

> > I'm not the one doing the Chicken Little routine,

I've negatively characterized my view of your negative position. I'm
comfortable with my assessment.

> I, on
> the other hand, do understand your opinions and think they are foolish > and naive.

You haven't even come up with a realistic description of the MOAB so I
am not surprised about your conclusions on my views.

> However, rather then continued judgment of each other's opinions,
> instead of actually discussing issues, I'll end our conversation about > this with that.

You haven't been "discussing issues". You've been touting your opinions
and others have been responding with their opinions. Yes, I've
characterized your views as "hand wringing" and a "Chicken Little
routine". That's how I see them.

Len's got his plagiarized statement down pat. He understands the
theory. He is having trouble with the practical application.

>Tests are useful if they are relevant. Learning how to skate is relaevant to
>learning hockey. Learning Morse code is not relavant to radio, including
>amateur radio.

In your opinion.

At present it is VERY relevent since it is required by law to know it if
you want to hold an HF-level Amatuer Radio license, Vipul.

So sayeth the FCC.

>I resent Morse coders blocking the license class and taking over the hobby.

Then you are a complete and utter fool, Vippy. No one is "blocking"
anything and certainly NOT "taking over the hobby".

If anything, the nuber of Amateurs with "current" Morse Code skills is far
less than it ever was, ergo any "taking over" is by anyone BUT "coders".

>I don't envy Morse coders at all. I have tested for realtime encoding
>abilities. I know I can do it. I don't want to waste my time learning the
>whole
>Morse code encoding scheme.

Then you obviously don't want an HF-level Amateur Radio license bad enough,
so stop your snivvelling and whining.

>When such a non-useful skill is a barrier to a higher license class,
>something
>is very wrong with the hobby.

You keep responding as if Morse Code proficiency is something new to
Amateur Radio when afterall it is YOU who is new to Amateur Radio. Not that
that is bad, but you are just one of those BK generation types who aren't
satisfied until you are given everything for nothing, and then when you've got
it, you either don't appreciate it, or try to spoil it for those who do.

>I would be fine with a more useful practical
>skill or a more difficult written test, so the license class is not "just
>handed to us".

That's EXACTLY what you want.

Steve

Dave, don't just blow, blow harder. You'll need to do a bit of
research before anyone with at least half a brain would buy into that.

Name all the "guys" in Somalia.
Name all the "guys" in Somalia that were amateur radio operators.
Name all of those "guys" in Somalia that were amateur radio operators
and obtained permission to operate.

And you've left out all the "gals" that were sent as well.

The standardized communications language is English. (ITU and ICAO refer)

Why should "International Morse Code" have provisions for non-English
language alphabets?

> about taxes would give aid and comfort to the
> enemy, right?

Actually, as I'm sure you know, the President already has the power to do exactly that. Under the old Marshall Plan, and the many more recent derivatives of it, the President has the authority to suspend elections, disband Congress, curtail Constitutional freedoms, raise taxes, make arrests without trial, execute prisoners, and so on. The sole trigger of that authority is an attack on this country. For example, the WTC attack triggered one aspect of that authority, which allowed the President to order all aircraft grounded and military personnel to airports. Wrapped in secrecy, we know very little about the full details of this authority - other than it appears to be fairly extensive.

The Patriot Act has now extended some aspects of that authority to non-wartime situations, with some arguing other aspects should be added to that.

Phil, I am absolutely not calling you a draft-dodger, and I'm sure
that had you been inducted in the service in 1961, you would have
served proudly.

However, this is rrap and we have rules. Unless you were in the
service, you have no capacity to comment on what military commanders
can and cannot do. Sorry, I didn't make the rules. That's just the
way it is.

Unless the PCTA give you a pass, and they will. That's what they do.
They have two standards. One for themselves, and one for those they
consider unworthy.

But don't feel bad about skirting the rrap rules and getting a pass.
I'm sure you actually do know more about communication law than anyone
else in here, and could probably score even higher than Dave or Steve
on picking out a military commander. It just isn't fair.

Here were my reasons to upgrade to Extra (in no particular order).

1) To see if I could do it.
2) So I didn't have to remember so many different frequencies for my
privilege limits. i.e. I only have to remember the top of the band, bottom
of the band, and split between voice and CW for some bands rather than the
tops and bottoms of the General or Advanced subbands.
3) To participate fully as a VE
4) A significant percentage of the most interesting DX on HF hangs out in
what are the Extra class portions of our bands.

OK, they went there and deposed the Saddam regime as ordered. Now
some of our boys want to play radio. Where do they apply for
licensing?

State the Address of the Ministry of Communications, a point of
contact, and what the fees are.

Actually not. You assume that his purpose here is to further some point. This might mean staying on topic. Might even mean an arguing style that doesn't antagonize. After all, there are a couple reasons to argue. One might be to change your opponents mind, another to goad and annoy them. From my observations, his purpose here is mainly to antagonize, in which chastizing others to remain "on topic" while venturing off topic himself is just another goad for thos he seeks to bother. And for whatever his motivations, the method woks quite well.

All in all, quite a good fisherman!

It is vital to do this in any well paying profession. You have to stay up-to-date and change as the profession changes. If you don't, you'll find yourself sidelined. The ability to learn and be flexible actually helps on your resume as a company will then see that you are able to change as the company changes and/or that even if you don't have everything they want that you are willing and capable of learning whatever it takes to fill in the gaps. Due to ups and downs in industry, I've reshaped my profile and career several times in my life to date.

Yes, yes, Dave. This was all after I had to educate -you- on what was
and is still posted on the ARRL web site, the very same people that
have you grinning from ear to ear now. You might like to refresh you
memory with a quick visit.

Somalia:
http://www.remote.arrl.org/FandES/field/regulations/io/recip-info_p.html#t5

> It's only a small issue since the message we've seen about GI's
> operating from Iraq requires written permission.

And the information listed by the very same source doesn't state that
written permission is required for Somalia.

Now you're probably grinning and drooling.

The point is they answer to President Bush, not to anyone who is
an Iraqi (or part of the UN, or anything else). If the US
military decides that Bush as allowed it, it can and will do it.
That includes causing significant death and destruction, not to
mention ignoring Iraq's entire legal system, and of course not
to mention allowing Amateur Radio operations by US troops.

Suggesting that someone else's rule against Amateur Radio
operations by the US military is significant, is absurd.

Steve's comments on International Law, and the idea that
deposing Hussein and liberating Iraq somehow is inconsistent
with allowing recreational use of amateur radio by troops,
indicates a bit of extreme naivete.

Y'know what, Jim? Before I looked it up (and I did), your leading question and hint, with the aide of the phrase "denounce the pacifists," I truly thought it was going to be Hitler himself. Sure enough, when I looked it up, I find that it was indeed a "Hermann Goering, Nazi leader, at the Nuremberg Trials after World War II." (Source: http://www.bigmagic.com/pages/blackj/column78f.html)

It doesn't surprise me at all...

I was checking out the Reuters website this morning. It's a true shame that "we" didn't think of how to address the problem of rebuilding Iraq--thoroughly--before going in. My prediction: we are not going to be able to "keep a handle on" the Iraqi people before we have to dodge or get out of there.

I saw today that R.H. issued some
traffic-tickets to a few hams for running
something called "enhanced ssb".

What exactly are the technical specs of
this mode of SSB? URL's which explain it?

It is when you take twelve to twenty KHZ of AF and force it into your
microphone input stage of the transmitter, which is designed to pass
aproximately 300 to 3000 cycles.

Adjust your carrier frequency of the transmitter to enable more 'LOW' tones.

Then listen to the results on the air.

Can you say too wide?

I haven't heard enhanced ssb (temporarily without an hf antenna, unfortunately). How does it differ in bandwidth from am, and might it be appropriate in the am "subbands"?

Thanks and 73,

OK....you want to prove the need......

In order to work the CW Contests you must know International Morse Code.

next.

>>have
>>never baked any bread, only that I haven't talked about it here.
>
> You do NOT work in radio and it is doubtful you work in
> electronics.

I am over six feet tall. There are not many radios big enough for me to work inside.

The simple fact is that you do not know where I work or what I do. And I'm not going to tell you. You have no way of knowing whether I "work in radio" or "work in electronics" or not.

> Other EEs would talk shop.

I do "talk shop" - but not in an amateur radio policy newsgroup. Since I do not work for the FCC, ARRL, an amateur radio equipment manufacturer, or as a communications attorney, such "shop talk" is simply not relevant.

Besides, you would probably not understand my "shop talk" anyway, Len.

> You don't out of fear.

Not fear. Common sense.

> What "fear" is that?

Not fear. Common sense.

> Of being discovered that you
> are NOT even close to working in radio or electronics?
>
Not fear. Common sense.

Besides, commercial radio experience is simply not relevant to amateur radio policy.

>>> You have
>>> NO references about communications experience outside
>>> of amateurism.
>>
>>"References"? From whom?
>
> Continue to talk in riddles. It only proves you have NO
> experience in radio outside of amateurism.

You haven't answered the question, Len. "References" is an ambiguous term.
>
>>> From that no one has to accede to your
>>> demand for any answer.
>>
>>I don't demand anything, Len. I simply asked a simple question: How do you
>>know what I have and have not done?

>
> You are very tiring. You are blustering and bluffing at great length
> about something you claim to be true but you cannot prove a
> single thing about communications outside of amateur radio.

Not at all, Len. I'm simply refusing to answer your questions about my work and work experience. Obviously that refusal infuriates you for some strange reason.
>
> Fakery is what you practice.

Not at all. It's called common sense.

>>I posted here for several years before I mentioned that I have BSEE and MSEE
>>degrees. Did the fact I did not mention them before mean I did not have
>them?
>>Of course not.
>
> You could have a PhD and won a Nobel Prize a quarter century
> ago and it wouldn't matter any more on the subject of
> communications outside of amateurism.

Then there's no reason for me to answer any of your questions, Len. You have just told us that no matter what qualifications I post, you will not accept them as proof of anything involving "the subject of communications outside of amateurism." So there's no point in giving you more information.

> You don't have any
> such knowledge or experience on communications outside of
> amateur radio.

How do you know? You keep making that statement as if it's a fact, but you have nothing to back it up but your own rejection of my already-stated qualifications and experience.
>
> You can't prove any...

Prove any what?

> you can't talk about it...

Sure I can. I choose not to. Choice - what a concept.

> all you are doing
> is BLUFFING. A knowledge con-job is what you are pulling
> in here. You are a grifter.

Not me. This is an amateur radio newsgroup. I'm a radio amateur, talking about amateur radio policy and a few other subjects. I have not made deliberate false statements here. Nor have I tried to mislead anyone.
>
>>Sure I do. I work as an electrical engineer. That's what I've done since I

Who would that be?
>
> You cannot make a mistake.

Sure I can. I've made plenty. Sope would say replying to your posts is a
mistake.

> You cannot admit a mistake.

Sure I can. You are the one who cannot, even when said mistake is pointed out repeatedly and carefully explained.

> You keep trying to cover up with misdirections and those
> terribly long posts where you get into all kinds of irrelevant
> minutae in order to avoid answering the original subject.

Here, Len, let me hold this mirror for ya....
>
>> Outside of amateur radio your
>>> radio communications is blank, a null, non-existant.
>>
>>That's just not true, Len. Live with it.
>
> In that regard I AM RIGHT.

No, you're simply wrong.

> LIVE WITH IT, pedantic perfectionist.

Seems like you're getting angry.
>
>>Incorrect. I just don't talk about my work here.
>
> Fear.

No, just common sense.
>
>>>>btw, I have worked with cystems that use 5823s.
>>>
>>> C-Systems was not under discussion. Did you or did you not
>>> work at C-Systems?
>>
>>Typo. You make more typos than I, Len.
>
> "C-Systems" is/was a corporation. Not a big one.

Never heard of it.
>
> No one can have a meaningful discussion with you if you make
> such terrible errors and talk in riddles.

Others seem to have no problem having meaningful discussions with me. Look at the stick-shift anaogy discussion I had with Bill Sohl, K2UNK, for just one example. Bill and I have very different opinions on many things, yet we respect each other and arfe able to debate in what I would call a very civil manner.
>
>>I have worked with systems that used 5823s. Cold cathode gas tube.
>
> You could have said the same thing about any other active
> device by simply looking it up from a tube chart.

So could you, Len.

The systems I refer to also had Dekatron counter tubes and a bunch of other specialized hardware. I could go on and on in great detail about that system, and many others. I choose not to.
>
> Did you EVER work on a piece of communications equipment
> for any reason that used any gas tubes?

Oh yes. The one I described above. Many times. That's all you need to know.

> Had you ever worked with the time-division multiplexes that I
> mentioned you would have been between -2 and about +10
> years old. NO ONE is so good that they can make others
> believe they worked on certain equipment BEFORE THEY
> WERE BORN.

I never claimed to have worked on those particular multiplex systems, Len. They are not the only communications systems that used gas tubes, ya know.

Do you claim to know the location and removal date of every single communication system that ever used gas tubes?
>
> You have become just an ordinary amateur grifter, a BS
> flinger who can't provide any references for himself beyond
> 1976 and outside of amateur radio.

Not "can't". "Won't". Not to you, anyway.
>
>>That's right! And neither can YOU prove I have no experience.
>
> No one can prove a nothing. You are a nothing.
>
Incorrect!
>
>>No, Len, I'm very real, working on real things.
>
> Few give a damn any more.

Those who matter, do give a damn.
>
>>I just don't discuss most of them here.

> discussing the original subject.
>
Really? Let's see, here's how you've described me in some posts in this thread,
Len. These are actual quotes from you, just from the post I am replying to:

"You are very tiring."

"You are blustering and bluffing at great length about something you claim to
be true but you cannot prove a single thing about communications outside of
amateur radio."

"Fakery is what you practice."

"You could have a PhD and won a Nobel Prize a quarter century ago and it
wouldn't matter any more on the subject of communications outside of
amateurism."

"You don't have any such knowledge or experience on communications outside of
amateur radio." (that one appears in various forms at least a half-dozen times
- probably more like a dozen)

"You are a grifter."

"Ho ho ho...the imperial speaks."

"You are null, a zero on that subject."

"Oh, boo hoo, is the pedantic parson starting to cry, too?"

"pedantic perfectionist."

"Fear."

"just an ordinary amateur grifter, a BS flinger who can't provide any
references for himself beyond 1976 and outside of amateur radio."

"You are a nothing."

"you, Jimmie, are a class-A hypocrite on your own statements."

"you are just an amateur charlatan, a poseur, a non-expert on radio-electronics
outside of amateur radio, an intellectual
con-man, a grifter. A nothing but with a 1976 set of degrees."

"You have stated nothing in regards to non-amateur radio communications."

"Paranoia. Mindless, irrational paranoia. FEAR."

"More FEAR. You can't possibly know the future. Your "defense" is the
vaporware of "waa...waa...he might do something!...waa.""

"BABY."

"You cannot ever be wrong, you cannot ever make a big mistake so you assume
that silly imperious, arrogant "I don't have to tell

you" pose. You must be a radio god in your mind. You aren't a god in anyone else's mind."

After all that, what rational person would tell you anything about their work experience?

Not exactly, Steve.

Plagiarism is the act of presenting the work of another as one's own, original work, without reference to the true source. That's why K8MN always frames that profile I wrote as a quote.

Sure I do. Further, I think he's already in the game.

> And I don't think Phil considers himself my mentor.

I don't consider Phil as your mentor either. Phil is a rational man.
Your mentor is the non-participant in amateur radio who frequently posts
here.

I didn't have the impression that everyone in Somalia wanted to operate
an amateur radio station. Those who didn't operate on the ham bands had
no problem. Those who operated legally had written permission. Then
there's you.

Bullshit! You may "think" it works that way, but in
fact it does not. I have been in a few hot zones, and the
C.O. does what he wants in regard to comms, and I do
mean ANYTHING. Bureaucratic rules mean crap in
a hot combat zone. The military command can authorize

WHATEVER it wants, and it DOES play EXACTLY that
way. I've been there, done that, and seen it!!!!!!!!!!!!
In fact, an old crusty warrant officer I worked for used to
delight in taking FCC advisories we'd get in the Tonkin
Gulf and wipe his ass (symbolically) with them. Oh, I
DO agree with you on one point. The JAG show is a
farce. Oh yeah, we would run our ham/MARS gear
on board anyway it took to get messages through.
Arcane FCC rules were of no concern to us.

Not only that, to my knowledge, all languages are syllabic languages.
Maybe Leonard meant to write about languages which use inflections to
convey meanings.

The Russians have added additional characters to morse for use in their
langauge.

The Finns have added additional characters to morse for use in their
language.

I'm sure other linguistic groups have modified morse code similarly.

And your "inquiry" is not even on the radar screen!
Bureaucratic psycho-babble. If you watch TV lately,
there's a war on and concerns with homeland security.
Arcane bureaucratic rules are of no concern to
battlefield commanders. Get a clue!

This was for a military purpose (which is authorized by DoD
regs), not for hamming/DX recreational purposes (which was NOT
authorized by DoD regs when I worked frequency coordination).

>Arcane FCC rules were of no concern to us.

I sure hope that the military regs to which I am referring
were of concern....

Your reading comprehension isn't very good either. I never said I
believed it, just said you claimed it. What I do not believe is
that you ever made it past the 6th grade.
Good thing they dumbed down the test or you would never have made
extra.

As usual, Floyd, you've got it screwed up.

I said that we went to Iraq to depose Saddam Hussein. We did that.

The PRESIDENT has stated that that, along with our seach for WMD, was our mission. He has repeatedly stated that Iraqis should govern Iraq, and has made it clear that Iraqis shall retain sovereignty.

There's nothing naieve about that. Those are facts.

I agree that a bit of "recreational radio operating" is not going to hurt anyone. My assertion was simply that if we are perceived as usurping this authority, however benign, it will be "evidence" that we do not intend to limit ourselves to the missions we insisted were our goals when we started this.

Do you suggest that we "signal" the Iraqis (and world opinion) that we have no intention of honoring our stated goals?

I would love to answer that question, Brian. I really would. But I am only surmsing that there are potential political ramifications if we go about the business of "issuing radio authorizations" for something that is clearly a civil action.

Personally, if I hear any of our guys/gals operating /YI, I'm gonna give em a shot...Sure likely that there won't be a bunch of IN's on the air any time soon.

>Im not directing those comments specifically to you Mike. Im just sick and
>tired of all this whinning about the CW.

Tsk, tsk, tsk. All of you who passed high-rate morse code tests
proclaim yourself "winners" and demand others be as good as
you. Then you put down others who don't care for morse code
modes and think that morse code testing should be eliminated
from license testing.

You might try a spelling checker. To complain without purpose
is "whining," from the word "whine."

Spelling it with two Ns makes it look like "winning" in that (if it
were a correct word) "whinning" would be pronounced the same.

Without the morse code test, olde-tyme hams would not have
that artificial trophy of "whinning" (winning) to claim their self-
righteous superiority over others. You would lose face (self-
esteem).

Try to stay on focus, astigmatic amateur.

This is NOT a forum for the INTERNATIONAL CIVIL AVIATION ORGANIZATION.

It is NOT a forum for flying or the SPOKEN language used in international air traffic control.

SPOKEN LANGUAGES do not use or "refer" to on-off keying coding of International Morse Code.

ITU-R S25 in its entirety does NOT reference any ICAO standardization or regulation.

> Why should "International Morse Code" have provisions for non-English
>language alphabets?

Why do you ask? Can you connect all eight synapses to form a coherent thought and understand any answer?

Polish.

writes:

>I do "talk shop" - but not in an amateur radio policy newsgroup. Since I do
not
>work for the FCC, ARRL, an amateur radio equipment manufacturer, or as a
>communications attorney, such "shop talk" is simply not relevant.

You do NOT work for the US government or in any possible
capacity for US foreign policy, yet you prattle endlessly
about those subjects which do NOT involve amateur radio.

You do NOT work for any railroad or have any stated work
experience in railroading, yet you have stated IN HERE that
you are an expert in knowledge of railroads. Railroads and
railroading are NOT amateur radio subjects nor is there any
reference to railroads and railroading in US amateur radio
regulations.

You have NEVER been a member of the United States
armed forces or any other military, yet you've implied that
you have expert knowledge of military policy, plans,
technology, and life as a military person.

You spout endlessly in a number of fields of work and
policy that have nothing at all to do with amateur radio.

You are not only irrelevant far surpassing most of the
readers in here, but you are misleading, misdirectioning,
and, in general, just a self-promoting bullshit artist.

>Besides, you would probably not understand my "shop talk" anyway, Len.

No one knows if that is true or false. You have NOT stated
anything the least specific on what your "shop" produces.

>> You don't out of fear.
>
>Not fear. Common sense.

FEAR, boy. That gives you an element of safety to be just
another bullshit artist.

>Not fear. Common sense.

FEAR, boy. That gives you an element of safety to be just
another bullshit artist.

>Not fear. Common sense.

FEAR, boy. That gives you an element of safety to be just
another bullshit artist.

>Besides, commercial radio experience is simply not relevant to amateur radio
>policy.

That is true but only for the Archaic Radiotelegraphy Society.

That society thinks that amateur radio operates on different
principles of physics than the rest of the radio world.

>You haven't answered the question, Len. "References" is an ambiguous term.

Don't try more misdirection. You have NO authority to demand
answers.

>Not at all, Len. I'm simply refusing to answer your questions about my work
and
>work experience. Obviously that refusal infuriates you for some strange
reason.

You are playing a fantasy role of being an all-knowing, all-
seeing radio god. Radio gods don't have to answer
questions put to them by mortals. You are a false radio god.

Mortals don't like pretend gods.

>> Fakery is what you practice.
>
>Not at all. It's called common sense.

You've been FAKING most of what you state as to "experience"
in anything other than referencing old amateur radio subjects.

>Then there's no reason for me to answer any of your questions, Len.

You pretend to be a radio god, above mere mortals. Bullshit
artists do the same thing.

>You have
>just told us that no matter what qualifications I post, you will not accept
>them as proof of anything involving "the subject of communications outside of
>amateurism." So there's no point in giving you more information.

Mortals cannot debate anything with radio gods.

You should answer at least one question by a mortal to show
your sincerity. You don't. You dance and evade the subject and
try to misdirect into other topics. You are a bullshit artist.

>> You don't have any
>> such knowledge or experience on communications outside of
>> amateur radio.
>
>How do you know? You keep making that statement as if it's a fact, but you

have
>nothing to back it up but your own rejection of my already-stated
>qualifications and experience.

Everyone can KNOW. Your "already-stated qualifications and
experience" are so ambiguous and lacking of detail that it isn't
worth more effort. You are just a bullshit artist.

>Prove any what?

No one can "prove" the existance of nothing. It has no
reference. You are a bullshit artist with nothing tangible
to refer to.

>> you can't talk about it...
>
>Sure I can. I choose not to. Choice - what a concept.

You DO talk...about nothing. Bullshit.

Lots of words, nothing of substance except cribbings from
old amateur radio magazines.

You are trying to establish a persona of grand guru in radio
who knows all, sees all, has done everything, is the expert
judge of all others. In short a radio god. You are looking like
just another bullshit artist.

>Not me. This is an amateur radio newsgroup. I'm a radio amateur, talking about
>amateur radio policy and a few other subjects.

You talk about MANY MORE subjects that amateur radio.

Google has the evidence. Live with it.

The most talk you do is the portrayal-persona of the grand guru of
amateur radio and your REPUTATION as impeccable, unimpeachable
peachy-keen expert on everything in amateur radio. You are just a
pretend god, a bullshit artist.

>I have not made deliberate false
>statements here. Nor have I tried to mislead anyone.

Tsk, tsk, tsk...you've made so many misdirections and so many
statements of "experience" that you cannot prove, you are
beginning to look like a high-level staff member of the old Iraqi
Ministry of Information.

You are GOOD at misleading many. Bullshit artists do that.

>The only "Imperial" I know is an inexpensive margarine.

We can't believe you are buttering us up.

>> "That's all you need to know."
>

>That's correct. Live with it.

You are a bullshit artist. Live with that. Others have to live with
your bullshit about "need to know."

>Incorrect. There are some others here who know more about what I do for a
>living.

Irrelevant. Gods of radio congregate with other gods, cannot
bear to do so with ordinary mortals. Bullshit artists tend to
stay with their own kind.

>What experience have I claimed that is not true?

You haven't claimed any experience.

>Incorrect.

You are a null, a zero, have NO references yet insist that you
"have" experience. Illogical.

>> You DON'T have any such experience in radio communications
>> outside of amateur radio.
>
>Incorrect.

Prove it. Your "word" is no longer good enough. You are a
bullshit artist, a con-man, a grifter.

>> You cannot make a mistake.
>
>Sure I can. I've made plenty. Sope would say replying to your posts is a
>mistake.

Who is this "Sope?" Another radio god that you haven't mentioned
because us mere mortals have "no need to know?"

>> You cannot admit a mistake.
>
>Sure I can. You are the one who cannot, even when said mistake is pointed out
>repeatedly and carefully explained.

I've made no "mistake" about identifying you as just another
wanna-be radio god bullshit artist.

You CANNOT discuss any personal experience with radio
communications outside amateur radio so you MASK that
with the imperious "you don't have the need to know."

In short, just bullshit.

>> You keep trying to cover up with misdirections and those
>> terribly long posts where you get into all kinds of irrelevant
>> minutae in order to avoid answering the original subject.
>

>Here, Len, let me hold this mirror for ya....

All I see is the backside of YOUR mirror. You are busy
enjoying the sight of yourself preening in your own
reflection.

>> LIVE WITH IT, pedantic perfectionist.
>
>Seems like you're getting angry.

Not at all. Disgust, yes. I don't like poseurs or pretenders.
You are one of those with all the masking and misdirection.

>>>Incorrect. I just don't talk about my work here.
>>
>> Fear.
>
>No, just common sense.

FEAR, boy. Pretenders live in fear of being uncovered,
unmasked, shown what they really are.

>> "C-Systems" is/was a corporation. Not a big one.
>
>Never heard of it.

Imperious statement. "Never heard of it" therefore "it does
not exist."

>Others seem to have no problem having meaningful discussions with me. Look at
>the stick-shift anaogy discussion I had with Bill Sohl, K2UNK, for just one
>example.

This forum is NOT about vehicular operation or automotive
mechanics.

>> You could have said the same thing about any other active
>> device by simply looking it up from a tube chart.
>
>So could you, Len.

True...except I never mentioned any EIA tube numbers, just
that I operated using the mentioned multiplexer...and HAVE
the photographs of it, both personal and official US Army
Signal Corps photographs identified on the back (including
the photographer).

You attempted misdirection again. More masking by dropping
any discussion of time-division multiplexing systems (alluding
but never detailing "having worked with such things") and going
to specific tube numbers. I made no mention of specific tube
numbers, only that they were "7-pin miniatures." Actual tube
numbers are irrelevant to the discussion. That equipment I
described first saw communications service in about 1952.

Miccolis wasn't even born yet.

>The systems I refer to also had Dekatron counter tubes and a bunch of other
>specialized hardware. I could go on and on in great detail about that system,
>and many others. I choose not to.

More misdirection. You have not connected all that name- and
number-dropping to COMMUNICATIONS.

You are lost. You may have lost the way due to the scent of
all the bullshit.

>I never claimed to have worked on those particular multiplex systems, Len.
>They are not the only communications systems that used gas tubes, ya know.

Describe them. So far, you have described NOTHING but gas.

>Do you claim to know the location and removal date of every single
>communication system that ever used gas tubes?

Irrelevant. More misdirection. More gas, gas that is worse
than swamp gas.

Miccolis has only made vague allusions to some alleged
experience in some kind of "communications system" never
identified in any way.

Bullshit misdirection. Better bullshit than most in here, but
bullshit just the same.

>> You have become just an ordinary amateur grifter, a BS
>> flinger who can't provide any references for himself beyond
>> 1976 and outside of amateur radio.
>
>Not "can't". "Won't". Not to you, anyway.

More BS along with a radio god's imperious statement.

All of these PUBLIC VIEW messages are readable by anyone
with newsgroup access. You cannot tailor responses to
individuals...all readers see the same text.

>> You can't. The fear factor is too high for you.
>
>Not at all. Just common sense.

FEAR. Radio gods will, unfortunately for them, find out they
are merely mortal and do NOT know everything about
anything, regardless of their bullshit techniques in trying to
establish a reputation of grande guru of communications.

>So have you, Len. And when your mistakes have been pointed out, you refuse to
>acknowledge them.

The radio god continues to claim I "made mistakes" as a generality.

I have made typographical errors, true, and admitted those.

Beyond that, Miccolis's OPINION was elevated to Supreme
Judge of What Is Right and What Is Wrong. OPINION.
That's an excellent misdirection technique but it is still bullshit.
Such bullshit does not fertilize TRUTH, it only covers it up
and winds up smelling bad.

Miccolis is NOT a radio god who can command What Is Right
and What Is Wrong.

>If there's BS, it doesn't come from me. As for "Class A hypocrite", I recall
>recently reading a post of yours where you called someone unknown to you a
>"boy" and a "racial bigot" in the same post. Fascinating....

"Boy" is the word for a youngster, an under-teenage kid. That
applies to ALL races. I am only "guilty" of using "boy" in
regards to emotional puffery of Miccolis in claiming all that
non-amateur communications experience which has NEVER
BEEN IDENTIFIED by him.

I will amend "Class A hypocrite" to "Class-A Hypocrite with
Oak Leaf Clusters." That's a military service colloquialism.

>Be my guest. Then tell us again about your Extra still being in its box, and
>how all Technicians are not code tested.....

More misdirection, trying to lead off into message territory
already well travelled.

IDENTIFY all that non-amateur communications (systems or
equipment) Miccolis CLAIMS to have "experience" with.

>>The fear factor is too high for you.
>>
>Not fear. Common sense.

You FEAR talking about something you've never done...that
would lead to discovery by others that you never did such.
You would lose face, self-esteem, and the grande guru
reputation you are seeking.

>> We all have to live with what you DON'T say.
>
>Silence is golden.

Fool's gold. Worthless. Not even good fertilizer to grow the
flowers of Real Truth.

>> You can't absolve
>> yourself by being arrogant, imperious.
>
>This mirror is doing a good job...

You love your own reflection. I only see the BACK of your "mirror."

>>>Incorrect! I just haven't given the details you want. And I'm not going to.
>>
>> You can't.
>
>Sure I can.

Then DO so. Nobody can discuss vaporware...only bullshit artists.

>> See? Paranoia. Mindless, irrational paranoia. FEAR.
>
>Nope. COMMON SENSE.

Cowardice. Flim-flammery. Fear of discovery.

>Really? Let's see, here's how you've described me in some posts in this
>thread, Len. These are actual quotes from you, just from the post I am
replying to:

Tsk, tsk, tsk. I AM "guilty" of "irreverent behavior" toward a
self-acknowledged god of radio.

Shoot me down with a thunderbolt, mighty Thor.

Or are you tho thore in thoth fingers you can't type?

>After all that, what rational person would tell you anything about their work
>experience?

ANY rational person who has the COURAGE to engage in public
discussion who HAS experience and doesn't disguise it by
ambiguous, no-detail generalities.

Have you any idea of what the original thread subject was? It
was about "Max Morse speed?" Remember?

I made some comment on a COMPARISON of maximum morse
rates versus modern modem equivalent word-per-minute rates
and you took off on a whole LOT of misdirection and attacks on
personalities, NOT about maximum morse rates.

All you've done so far in here is to attempt denigration of
another's person by a lot of vaporware claims of your own.

Would you like another "profile" statement on you? :-)

I apologize to you, Brian.

I stand corrected. Heil's impersonation of Otto Preminger playing a
Luftwaffe commandant is quite good. He needs to lose some
weight to better fit the polished jackboots.

He is tho thor he can't hurl thunderbolts now...

>
> So sayeth the FCC.

Wrong. No "HF-level Amatuer Radio licenses" exist.

There exist two classes of US amateur radio licenses having below-30-MHz privileges: General and Amateur Extra.

The FCC "sayeth" something about "relevancy?" Not for morse code testing. Look in the entirety of Title 47 CFR, the Federal Register, or the reading room in DC for other FCC statements.

FCC has said in 1990 and 1999 that they do not consider morse code skill as anything to tell the regulators about an applicant's ability to be granted a license.

>>I resent Morse coders blocking the license class and taking over the hobby.

>
>Len, speaking of books, I'm thinking of joining one of those book
>clubs that specialize in military subjects. Have you or anyone else
>ever belonged? If so, did you consider it worthwhile?

I've never belonged to such book clubs. Don't know of any
ex-military friends who do, either...which includes an ex-CWO
(Army) who was a classmate in high school...and members
of the Association of Old Crows (professional group of
EW and ELINT workers).

Anyone who wants to keep up-to-date on military communications
on land can peruse the 300+ Field Manuals available free-for-
download at the General Dennis J. Reimer Army Training and
Doctrine Command digital library. That's an official US Army
website.

There are other documents also free for download, but only for
US Army as far as I know. One of those is the "AR" or Army
Regulation covering EM spectrum use and assignment, including
amateur radio operation outside of the USA. It was official as of
1997...at least insofar as the US Army is concerned...it hasn't
yet been ratified by ARRL and the JAG-gedy Oberst. :-)

US Army leads the branches again in historical documents, one
site being adjunct to West Point Military Academy. Another
one has complete chapters from hardcover books published by
book companies. The US Army Military Intelligence Center at
Fort Huachuca has an on-line museum of notable events and
people involved in communications, interception, and decrypting.

There's also the US Govenment Printing Office which has many catalogs free for the asking. They have an enormous title listing on many and varied subjects, including military history. Unlike ARRL, they do not charge shipping fees for USPS delivery. :-)

The "sale" section of Barnes & Noble, B. Dalton, and Borders book stores is a good place for low-cost soft- and hardcover books on military history and other subjects...all at reduced prices. Amazon-dot-com is another good place for bargains, browzeable with your computer...but apparently is undesired topic in here due to certain individual's enmity. Such sales aren't predictable and contents can vary from week to week.

I've not found most "book clubs" to be of great enough value for what I'm interested in. The same is true of other "clubs" offering recordings or various objects (art or otherwise). There's plenty of FREE information available over the 'net for the taking.

That's not it. You'd keep the carrier freq the same, but just widen the
bandpass filter on the modulator. So it modulates audio from 100Hz to
10KHz instead of the usual 300Hz to 3000KHz.

IIRC, RH said that if the band is not crowded, that wide SSB was okay.
From what I gather, enhanced SSB is just wideband audio. Something
like 100Hz to 10KHz. "HiFi SSB". Should be no worse a bandwidth
hog than AM. But don't operate it if the band is crowded.

No, in their case there is NO attempt at enhancing their audio. They just
want to run everything to the right, processor on, and scream into the mike.
They all use those 'banana' style mics, most of them 12 inches long.

I think that's true IF the tests are relevant to the subject. Learning how to skate is relevant to hockey, learning how to swim isn't really relevant to hockey.

>>Let's take another of my hobbies, Ice Hockey. If someone wants to be on
>>my team, they need to know how to skate.
>
>Tests are useful if they are relevant.

Agreed!

>Learning how to skate is relaevant to
>learning hockey.

Agreed again!

>Learning Morse code is not relavant to radio, including
>amateur radio.
>
You were going good there, Vipul, then ya lost it.

Learning Morse code IS relevant to amateur radio. Anybody who says it isn't just doesn't know much about amateur radio at all.

Whether a separate Morse code test is needed, or beneficial, is another thing entirely.

>>My skills are just not good enough. I deal
>>with it though, and don't think the people playing in the NHL are
>>selfish. Rather, I admire them instead of resent and envy them.
>
>I certainly don't admire them learning a skill of little use.

True. But Morse code is of great use in amateur radio.
>
>I resent Morse coders blocking the license class and taking over the hobby.

I resent you saying Morse code is not relevant to amateur radio.
>
>I don't envy Morse coders at all. I have tested for realtime encoding

>
>Congratulations on learning Morse code.
>
>>Things that are just handed to us are seldom
>>appreciated. Of course in America these days, everything is owed to us.
>
>That argument would be useful if a USEFUL skill was tested to obtain a
>benefit.

Please explain why Morse code is not USEFUL to amateur radio operators. Not the
Morse code TEST, mind you, the skill itself.
>
>When such a non-useful skill is a barrier to a higher license class,
>something
>is very wrong with the hobby.

But the skill IS useful.

>I would be fine with a more useful practical
>skill or a more difficult written test, so the license class is not "just
>handed to us".

Give us some examples of a "more useful practical skill".

>from? Tuning those HF rigs in Japan?

Poor baby, get your "sensibilities" all a-twitter?

Before you were ever born, BOY, I was reading TMs and FMs about US Army signal equipment that I operated on HF, VHF, UHF, and microwave.

Let me amend that slightly. The microwave equipment required use of a 3-inch thick General Electric complete operation and maintenance manual since the AN/FRC-23 was a GE commercial microwave terminal with a Signal Corps sticker on each of its six rack doors. While you were a year old and soiling your diapers I had the responsibility of keeping 9 terminals up, operating, and regularly serviced to carry 207 full-duplex voice channels to four other locations.

After US Army active duty I was reading AND working on radio-electronics equipment, mostly for government contracts for the next 47 years...including college textbooks, having to work assigned problems in classes, both while holding down a regular day job. Much of that government contract work involved engineering design with all the design responsibility of a senior staff position. Further, most of that design work was done before I got my degree because I had demonstrated to others that I could successfully complete such work.

Robeson has NO idea of what electronic engineers HAVE to read and study to perform their job descriptions capably. Here's some of it - 8 monthly trade magazines (there are more but those are specialized), data manuals for components from the major manufacturers, EIA standards (dozens for one small area,

there are hundreds), FED standards by the dozens (with labels FED-STD-nnn), MIL standards by the dozens-plus (MIL-STD-nnn), ARINC standards (for civil aviation), individual field and technical manuals (TMs, FMs, plus the Navy BuShips and NavShips equivalents), the technical description of each electronic contract document (the half pertaining to hardware, bean counter types handling the financial half), textbooks of many different kinds for general circuit and system information, data catalogs by the hundreds, test equipment manuals to make certain one is using the test equipment correctly, all kinds of Application Notes that pertain to new instruments, new products, most of which are small tutorials in themselves, the appropriate city, county, state government regulations if that is required by a contract, the various computer-aided-design program manuals as used by a company, all the corporate manuals and documents as required for engineering personnel, professional association documents and information, city-county-state engineering regulations as they apply (location dependent), all kinds of new product announcements and bulletins...plus the CD-ROM versions of all the preceding as they are published.

No one has to memorize any of that in detail, but one MUST be able to know where to get detailed information required for a task. A requirement is to LEARN from past jobs and be able to apply such learning for better, more-competitive work in the future. Such learning INCLUDES the interpersonal relationship attitudes one must have in a larger group AND the proper attitude in meetings and design reviews with senior staff (who've been in the business longer than most of the junior staff). Bullshit lasts about as long as a manager can notify personnel to start termination...vague, ambiguous responses, or exaggerated knowledge or experience might keep such as long as a week in engineering...or they are shunted off to adminstrative tasks requiring only rote work (purchasing, stock inventory, etc.).

Responsibility is part of the job, responsibility proportional to staff position. The "approved" title block on drawings and documents MEANS something. No pretty certificate or award is going to take its place or ensure you CAN do the job assignment. A wall full of pretty paper things that impresses neighbors and family doesn't mean squat when it comes to keeping that salary check appearing regularly. Managers and senior staff KNOW who can do what and how well. There's a "test" every payday: If you've done the work required, you get paid; if you haven't it will be a termination check. No grades, no "classes."

Robeson can't understand any of the above. He is solely motivated by emotional things in a technological endeavor, certificates, awards, class of license, tenure in a hobby,

and above all the pretense of a better radioman because of demonstrated morse code ability. Robeson has NO demonstrated capability of actually LEARNING anything about radio or electronics...except maybe in memorizing sales phrases from radio ads in QST. He has demanded a special course in microwave techniques of me in here, yet has NO prerequisites of knowledge of fields and waves or even basic low-frequency impedance/admittance characteristics of circuits. Just the same, he thinks he has some sort of "right" to put down others who know more, have done more in radio-electronics.

Despite having a second career in the medical field as a caregiver, he turns around and does not care one bit about acting badly on a social level in this newsgroup. That is demonstrated sociopathy. It doesn't take any degree in psychology to see and understand his symptoms.

Because of that "don't care" attitude he gets the "profiling" as follows:

No matter what job, educational level, employer, or government/military service that any newsgroup opponent has, if said opponent fails to honor and revere Robeson's views, they will be the target of Robeson's arrogant insults, ridicule, name-calling, put-downs, denigrations, and gross exaggerations of Robeson's self-importance and experience...plus the typos done in anger in emotion-laden "replies"...not to mention puerile bigotry and sexual-connotation comments.

>
> Why is that "timely?" How does that apply to amateur radio?

You are usually critical of "old" things, Len. So a recent patent would be more valued by you than an old one.

>
> Last I looked, US patents had a "life" of 17 years and were
> renewable once for 17 more. Could have changed.

You should look again. To my knowledge US patents have never been renewable, and they are not renewable now. The 17 year term is old info.

The USA issues three kinds of patents: design, utility and plant. Design patents are generally in effect for 14 years, utility and plant patents for 20 years. While US patents are not renewable, but under certain circumstances the terms of relatively recent patents can be extended or adjusted. Failure to pay maintenance fees (when required) can result in early termination of a patent.

>
> My patent was granted in 1974.

Then it expired in 1991. 12 years ago.

> It was on a radio circuit and

That's nice, Len. I'm happy for ya.

> It was assigned to RCA Corporation and up for renewal
> in 1991...but General Electric Company bought RCA Corp. then
> and may or may not have renewed it or had it reissued under a
> different patent number.

In most companies, part of an employee's or contractor's conditions of work are that all patents will be assigned to the employer. That's fair, because the company is footing the bill.

> No hu-hu on my part. I did it first.

That's nice, Len. I'm happy for ya.
>
> Does Miccolis have ANY sort of patent, in or out of electronics?

How does that apply to amateur radio?
>
> If not, why hasn't he done so? He's had 27 years since he got
> his EE degrees. Or, none of us "has the right to know what he
> did."

Gee, Len, you sure are critical. In all your years in "radio-electronics", you have exactly one patent, and yet you criticize me and assume I don't have any.

Please explain to us how your patent grant makes you some sort of an authority on amateur radio or amateur radio policy. Please explain how your 1974 patent proves that there should not be any code test - not even the current 5 wpm receiving test - for any amateur radio license.

Let's do a thought-experiment, folks. Suppose I did have a patent, or several. How would Len respond to that information? Would he say something like "That's nice, Jim, I'm happy for ya"? Would the existence of a patent, or several, cause him to stop the name-calling, insults, etc.?

Or would Len pick the patent(s) apart, criticizing my role in them, what they did, how they applied to "radio-electronics"? If they were assigned, and/or had co-inventors, what would Len say about who they were assigned to and the co-inventors?

Somehow I don't think Len would be very complimentary. Does anyone have a different opinion?

3125. Re: "enhanced" SSB ?

Newsgroup: rec.radio.amateur.policy
Date: 2003-04-20 00:42:08 UTC
From: Jim Hampton <aa2qa@frontiernet.net>
Message-ID: <z1moa.5815$hT2.1753@news02.roc.ny.frontiernet.net>
Source record: 65312

A proper AM signal will occupy a bandwidth of 6 KHz. I believe it was stated that some of these SSB signals were 10 KHz wide. I doubt folks would complain if they ran these up on 10 meters where there is plenty of space; certainly this is too much bandwidth for 20 meters and below. Then again, the article suggested that some of the signals were more than simply wide audio (perhaps overdriven amps) ... seems simply another facet of "I want everything my way". Oh well ...

>other than it appears to be fairly extensive.

True.

But has any President abused this authority? I don't recall President Bush ever
saying protest or dissent should be stifled in this country. Perhaps we should

all follow his lead on that.

Nonviolent protest and dissent actually make us stronger, not weaker, because the decision-makers are not sheltered from any views, no matter how different from their own.

> The Patriot Act has now extended some aspects of that authority to
>non-wartime situations, with some arguing other aspects should be added to
>that.

The concept of "wartime" is not the same as it was 60 years ago - that's part of the problem. When was the last time Congress actually declared war on another country? The trend since at least Vietnam (probably since Korea) has been for Congress to pass a resolution one way or another and toss the decision to the Commander in Chief.

Regarding MOAB: Sometimes the mere appearance of a weapon can have an effect. There's a long precedent for this, too: During the Berlin Airlift, the US reopened an airbase in England and sent some B-29s there. Made sure the Rooskies knew it, too. They knew the B-29 was the plane that delivered The Bomb to Japan, and that it had the range to reach Soviet territory. Of course no actual A-bombs were sent to England, but the Rooskies didn't know that.

Ding ding ding!

And the lady wins the Kewpie doll!!

Pretty scary, huh? The Snopes site sez that little speech was not in the
Nuremberg trial testimony, but rather part of an interview Goering gave when he
was being tried.
>
>It doesn't surprise me at all...

I thought you would find it interesting.
>
>I was checking out the Reuters website this morning. It's a true shame that
>"we" didn't think of how to address the problem of rebuilding
>Iraq--thoroughly--before going in.

I kind of think "we" did. However, the Iraqis may have had other plans!

> My prediction: we are not going to be
>able to "keep a handle on" the Iraqi people before we have to dodge or get
>out of there.
>
A valid concern! But that may be part of the plan. If "we" can honestly say
that the Iraqis are glad SH is gone but they don't want "our" help, "we" can
just leave and honestly say "we did the job we set out to do".

And would it be so bad to let somebody else foot the bill for a change?

I recall, early on, a figure of $100 billion being tossed out as the cost of
the war itself. Yesterday I heard that the cost so far was $20 billion. Now $20
billion is a heck of a lot of money, but if you're expecting $100 billion, $20
billion sounds like a real bargain.

I recall that one of the reasons for the war was Iraq's alleged WMDs, which
have not shown up yet. Another reason was alleged terrorist ties, which have
been validated by the discovery of a terrorist training camp in Iraq.

However, in the end all of that may pale in comparison to the horrible stories of death, torture, and other atrocities now coming out of Iraq. It is particularly interesting to hear and see even the most "liberal" media reporting these stories from the Iraqis who suffered them. If all the war did was to free Iraq from that horror, all the world (not just the US and UK) may well judge it to have been worthwhile.

Instead, we build ramps and other accomodations. We don't cancel the test.

>It was a lot harder for me to
>get up to 15WPM than someone with good ears.

I'm sure it was.

But in 1990 the FCC reduced the code test to 5 wpm for anyone with a documented disability. Tinnitus would certainly qualify, in this layman's opinion. So the problem from 1990 on has been "how much trouble is 5 wpm?"

>Then all I could find were
>"standard" QSOs (name is, rig is, qth is ...). Boreing! When I dared

The prime purpose of the tests is not to limit the number of hams.

>Unlike Morse, a well thot out written exam could
>serve a good purpose.
>
What would constitute a well thought out written exam? How would it be different from today's writtens?

Consider this: I know a ham who took the old Advanced test nine times and passed it on the tenth. He had similar difficulty with the other writtens. He studied hard and knew the concepts, but he was simply not good with numbers and apparently had "test phobia". The Advanced written was much more difficult for

him than for most people who take it. He would have done fine on an open book test, but FCC exams are not open book.

Why did he have to go through all that?

It's "in" focus, Lennie.

The subject was non-English characters being represented in
"International" Morse Code.

You, the ever spineless and idiotic court jester, try to derail that in
favor of your own rants and ravings.

Didn't work.

>It is NOT a forum for flying or the SPOKEN language used in
> international air traffic control.

Sure it is. The title of the newsgroup is "rec.radio.amateur.POLICY".

>SPOKEN LANGUAGES do not use or "refer" to on-off keying
> coding of International Morse Code.

English was the subject. Not the manner in which it was employed.

>ITU-R S25 in its entirety does NOT reference any ICAO
> standardization or regulation.

Mutual agreement has put the same emphasis on English as the primary
(albiet certainly not sole...) language for Amatuer Radio communications.

If YOU were a licensed and experienced operator, you'd know this.

>Why do you ask? Can you connect all eight synapses to form a
> coherent thought and understand any answer?

Perhaps if YOU could get YOUR synapses in the right order, you wouldn't
have to keep a roll of toilet paper near by every time you opened your mouth,
Lennie.

No, President Bush hasn't said anything (at least publicly), but some of his supporters certainly have. And I likewise believe healthy protest and dissent makes us stronger as a nation.

> Regarding MOAB: Sometimes the mere appearance of a weapon
> can have an effect. (snip)

I thought about that too, but with the number of ships and planes in the region capable of delivering nuclear weapons, the US certainly didn't need to make a statement about its military might.

> Mortals don't like pretend gods.

I'd say Jim hit it on the nose...Fear, anger and jealousy are just seething from your retorts, Lennie. If it wasn't, you'd be able to answer the questions and move on. Instead you resort to this "radio god" silliness.

How pathetic. How absolutely pathetic.

> You pretend to be a radio god, above mere mortals. Bullshit
> artists do the same thing.

Even more profanity from a person alleged to be a college educated professional. Used up all your other options, Lennie?

>You should answer at least one question by a mortal to show
> your sincerity. You don't. You dance and evade the subject and
> try to misdirect into other topics. You are a bullshit artist.

For not wanting to subject himself to the same slurs and denigrations you've heaped on everyone else...?!?! HARDLY!

>You are trying to establish a persona of grand guru in radio
> who knows all, sees all, has done everything, is the expert
> judge of all others. In short a radio god. You are looking like
> just another bullshit artist.

A-N-G-E-R M-A-N-A-G-E-M-E-N-T. Lennie, this is REALLY getting you down. Maybe your correspondence course psychologist wifey can give you some "therapy"...?!?!

>You talk about MANY MORE subjects that amateur radio.
>
> Google has the evidence. Live with it.

So do YOU, Lennie, despite your frequent attempts to redirect others who are not playing by YOUR rules.

Live with THAT, Your Sulkingness.

>You are just a pretend god, a bullshit artist.

As opposed to a REAL god such as yourself, Lennie...?!?!

And MORE profanity. Guess those years in night school were wasted, eh?

>You are GOOD at misleading many. Bullshit artists do that.

Yes they do...Like trying to hide behind the KIA's of an Army unit you joined three years and 500 miles away from the battle.

>I've made no "mistake" about identifying you as just another
> wanna-be radio god bullshit artist.

>You CANNOT discuss any personal experience with radio
> communications outside amateur radio so you MASK that
> with the imperious "you don't have the need to know."

Jim has very accurately discussed a number of technical aspects of radio
without once needing to retell the tale of how he used to do it in
1950-something.

>In short, just bullshit.

Getting really boring, Your Scuminess.

>>> LIVE WITH IT, pedantic perfectionist.

Gee, Leonard, you aren't involved in amateur radio in the tiniest way
and you haven't let that slow you down a bit. I guess that'd make you a
self-promoting...well, you know the rest.

I've saved you the embarrassment of seeing the rest of your wild ravings
again by snipping the balance.

[expletive deleted]

That's 19

If there's such a scent, it did not come from me ;-)
>
>>I never claimed to have worked on those particular multiplex systems, Len.
>>They are not the only communications systems that used gas tubes, ya know.
>
> Describe them.

Gas tubes? Well, the 5823 is a cold-cathode tube with three electrodes. 7 pin
miniature, about the size of a 6AU6....

Oh you mean the system I was talking about? Well, it's been a few years.

19" rack mounted, powered by 110 AC and 24 volts DC. Various modules in the
main cabinet: Power supply, receiver, transmitter, units station counter, tens
station counter, bit counter, control unit, diode module.

Sound familiar?
>
>>Do you claim to know the location and removal date of every single
